Some facts have come under our observation, that lead us to suppose that this habit can be overcome, and that the skillful fruit-grower can rely upon a crop of apples every year with as much certainty, as upon any of the root or grain crops. In the front yard of the old homestead, there stood an old apple tree in a deep rich loam. It was kept in grass and bore a large crop of early apples in alternate years, yielding nothing in the interval. By way of experiment, the green sward was broken up, and the whole yard manured and planted as a garden. To the great disappointment of all the skeptics in the region, the old tree changed its habits, and bore very full crops two years in succession. The yard was seeded down and it relapsed, but continued to bear in the years which would have been barren in the old order.

When a young orchard is put out upon a piece of recently cleared woodland, where there is abundance of vegetable matter in the soil, it bears with much more uniformity every year, than an old orchard under common treatment in the same vicinity. Orchards planted in the new settlements are much more productive than those in the older States for the same reason. The trees find aliment enough in the virgin soil to mature good crops every year.

There has lately been discovered in the Historical Society library at Hartford, Conn., a curious old document, the account book of Henry Wolcott, one of the first settlers of that State. It was kept in short hand, and contains, among other things a record of the yield of his apple orchard, at Windsor, for a few years after it first commenced bearing. In 1651 it bore 496 bushels, in 1652, 452 bushels, and in the two following years, 1127 and 1288 bushels, showing no tendency to the alternate bearing, which now marks all the orchards in that region. It is interesting to find among the names of the apples then cultivated, Summer Pippin, Holland Pippin, Pearmain and Bellybond or Belle et bonne, varieties still popular with the fruit growers of our own times.

Nothing pays better for care and attention than the apple. A single acre in this fruit, kept in good heart, by manuring and cultivation, will yield more profit than ten acres, neglected in the ordinary way. The only secret in having apples abundant every year is in keeping the trees clean, and in feeding them. He who has plenty of muck or peat, lime or ashes, and stable manure, need not go off of his own premises to find plant food for his orchard. The breaking up of the turf in an old orchard, and the application of a compost of these materials, will work wonders. Nothing but root crops should ever be attempted in an orchard. The fruit and the grain want similar constituents. We have seen apple trees put back for years by a rye crop. The present month is a good time to begin the work of renovating old orchards, and reforming their bearing habits. "Dig about and dung the barren trees," before you decide to "cut them down as cumberers of the ground."—[Am. Agriculturist.

Hungarian Grass.

THIS is the name of a new grass that has been lately introduced in the Western States, and which promises to be valuable. The Utica N. Y. American says of it: "The Hungarian grass seed is not identical with any millet that has been grown in this country. Its seed is smaller and more like that of other grasses. It has to be sown annually, from April 15th to June 1st, according to climate, &c. In the latitude of Central New York, it may be sown at any time in May. A bushel of seed is enough for three acres. It produces from twenty-five to thirty bushels of seed per acre, and from three to six tuns of the best quality of hay. It was introduced into Iowa, about two years ago, by a Hungarian exile, and it is now creating a great excitement in all the West. We will pledge our reputation now and forever, that this grass is *no humbug*; and it was not till we met with the most *conclusive* evidence of its great superiority over other grasses, that we offered it to our subscribers. The hay is not greatly injured by cropping the seed, and as the price of seed will be high for some years, it is certainly a good investment for any farmer to make, say from a quart to a bushel of seed this year."

CURE FOR STRETCHES IN SHEEP.—I noticed in your last Cultivator, a communication from S. Conc, headed "Cure for Stretches in Sheep." He says, "cut their throats, and take off their pelts," etc. Some years ago my sheep took a complaint, that I called the stretches, having never seen or heard of the like before. Whether it was the proper stretches or the belly-ache, I know not; but one thing is certain, I lost quite a number with it before I could obtain a remedy. One day in conversation with a brother-in-law, knowing that he kept quite a number of sheep, I asked him if his sheep ever had the stretches, to which he replied in the affirmative, and said that they had always died. A little daughter of his, standing by, spoke up and said, "why no, father, that winter when you and mother were gone to Ohio, there were a number that had it. Rice (his little brother) and I gave them red pepper tea, and cured every one that took it." I had tried quite a number of remedies to no effect, but I thought I would try the pepper on the next one taken with it, which I did, and I have not lost one since. My method is to take two or three pods, put them in a pint tin cup, pour on boiling water; and let it stand on the stove until well steeped, and then set away to cool. Take a common tunnel, put the small end in the sheep's mouth, and hold up its head so that it will run down. If the sheep should commence to cough, stop until its quits and recovers its breath. If taken at the commencement, one dose generally suffices. If in the space of half a day or so, the symptoms did not abate, I should repeat the dose. [A. G. Webster, in Country Gentleman.

CUTTING THE LEAVES FROM SUGAR-CANE. Calvin Dickey, of Mercersburg, Pa., has invented a machine for the above purpose, previous to crushing or grinding the stalks for sugar. The invention consists in having a cutter attached to a tabular flanch, so as to form a hollow cutting cylinder; this cutting device being connected with a grinding or crushing mill in such a way that the stalks of sugar-cane will be drawn through it by the rollers of the mill, and the leaves will be cut from the stalks.

State Agricultural Society's Reports.

[CONTINUED.]

QUARTZ SPECIMENS.

THE committee on quartz beg leave to make the following report:

Quartz specimens from Whitlock creek, Mariposa county. This is a fine specimen of rock, rich; dimensions of claim or vein, four feet thick, and one hundred feet deep; owned by Goodman Diltz & Co.; first premium.

Quartz specimens from the Union and Eureka vein. This vein is nine by fifteen feet in width, and from one hundred and fifty to two hundred feet in depth. This claim is rich, situate on Sutter creek, in Amador county; special premium, ten dollars, and framed diploma.

Mount Gaines claim, situate in Mariposa county. This claim is owned by Mr. Collins; framed diploma.

Kern river vein, rotten quartz, supposed to be easily worked; framed diploma.

One collection from Mary Rose vein, Kern river; decomposed rock; framed diploma.

One collection of carbonate of copper; a very fine specimen; from near La Paz; fr. diploma.

One exhibit of cinnabar or quicksilver ore, taken from the New Almaden mine; fr. diploma.

One exhibit of lignite coal, from Alameda county; a good specimen; framed diploma.

One sample of silver ore, taken fifteen miles from La Paz; framed diploma.

The committee on quartz, owing to the limited space of time, was not able to make as thorough an investigation as this branch of mining was deserving. Many of the specimens on exhibition possessed uncommon richness and great value. Your committee are of the opinion that quartz mining will soon be the leading branch in gold mining in California. In our gold mountains there is a great amount of quartz rock, bearing gold; there will be no lack, for ages to come, and should thousands more people come from other lands, yet there will be no lack of gold in these golden hills.

All of which is most respectfully submitted.
I. D. Morley, Ch. Committee.

MINING IMPLEMENTS.

The committee to whom was referred the department of mining implements, respectfully submit the following awards:

1st. To Mr. Diltz, for a model of a furnace for expelling the sulphur from auriferous pyrites of iron; framed diploma.

2d. A framed diploma, for a model of Howland's rotary quartz crusher.

3d. For a model of Morris' gold amalgamator; a framed diploma.

4th. To R. Gilchrist, for a model of a riffle box; a framed diploma.

5th. To Bryant & Co., a framed diploma, for hydraulic pipe.

6th. To E. A. Taylor, for a small model of Weaver's drop riffle box; twenty dollars.

7th. A model quartz amalgamator, by R. Gilchrist; diploma. J. A. Collins, Ch. Committee.

CARRIAGE HARNESS.

The committee acting as judges on carriage harness, single harness, gentlemen's saddles, ladies' saddles, and finest bridle, report that they have examined all that are on exhibition, and have decided as follows:

Carriage Harness. None on exhibition of California manufacture.

No. 8. Single buggy harness; Main & Winchester, prize. No. 8. Black riding bridle, do do.

No. 8. Best gentleman's saddle, stamped covers; Main & Winchester; first prize.

No. 27. Second best gentleman's saddle, silver pommel, and fouster; M. S. Bird.

No. 8. Best lady's saddle, is one with fine stamped machilla, inside lined; Main & Winchester.

N. 27. Second best lady's saddle, is one with buckskin seat, and stamped side-skirts; M. S. Bird. All of which is respectfully submitted.
O. H. Peirce, Ch. Committee.

BOOTS AND SHOES.

The committee appointed to examine and award the premiums for the best specimens of boots and shoes, have attended to the same, and report: That they have awarded to No. 29 the Society's premium.

The committee are sorry to say that there was but one sample presented, and this was of questionable utility; it being a pair of fine, patent opera boots. We would have been better pleased with samples of good substantial work, suited to the wants of the miner, farmer and mechanic; the real builders and supporters of California wealth and fame.

The importance of this branch of industry to California will be better understood, when the fact is taken into consideration that California needs for her consumption, annually, over three millions of dollars' worth of these articles. We award to F. Mabus, of Stockton, first premium.
P. S. Tigg, L. Mann, Committee.

The committee on Leather, report that Joseph Boston, of San Francisco, exhibited the best sample of California-made leather, and is entitled to the premium.

They also recommend, for some four specimens of black bridle leather, a diploma to Samuel Steine, of Stockton.
M. S. Bird, Ch. Committee.

The committee on the best Mule Harness report that they find but one set presented, by M. S. Bird, of Stockton, a set for four mules, and to which we award the first premium. The leather and workmanship is of superior quality.
J. Sarles, Ch. Committee.

The committee to examine Malt liquors, having tested the two qualities of Ale offered for premium, do unanimously decide in favor of the Lion Company. Wm. Daniels, Ch. Committee.

The undersigned committee report that they have, with pleasure, made an examination of a Gold Pan exhibited by O. J. Backus, and would recommend, for the same, the first premium, framed diploma.

Also, have examined a Spoke-boring machine, exhibited by John Minges, and would report that they find it an excellent machine, and would recommend a diploma for the same.
T. O. Shaw, S. Williams, Committee.

The committee to examine specimens of Dentistry, would report that they have examined some beautiful specimens, presented by Dr. D. Burbank. The artistical beauty of these specimens is very fine, and we would award the premium to No. 2, exhibited by Br. D. Burbank.
A. Shell, Ch. Committee.

The undersigned, committee to examine the Brushes of home manufacture, would here report: That they have made an examination of some fine samples, exhibited by Newman & Brothers, of San Francisco, and would recommend for the same, framed diploma.
John Miller, A. S. Gage, Committee.

Purifying and Filtering Water.

As the period is now approaching when greater necessity exists for the filtration of water than during the winter season, anything new on the subject deserves attention. We learn, by a late number of the London Engineer, that A. P. Malard, of Paris, has recently secured a patent for the employment of prepared wool-shearings as a superior material for the water to pass through to be filtered. He employs any common filter, such as the portable kind so well known in our cities, which have a perforated false bottom, or a supporting shelf of wire gauze, on which the filtering material is laid. The wool-shearings employed by M. Malard are prepared in such a manner as to render them very durable, and not so liable to rot as the fibrous filtering diaphragms commonly employed. He first boils his wool-shearings, for one hour, in a solution of alum and cream of tartar, then takes them out, and exposes them to the air until they are quite cold. After this he boils them, for an hour, in a solution of nut-galls and acetate of iron, then in a weak solution of the carbonate of soda, after which they are taken out, washed perfectly clean, dried, and are ready for use, by placing them in a stratum on the false bottom of the filter, and allowing the water to percolate through them into the recess below, when it is drawn off clear and limpid for domestic use.

As hard water cannot be employed for washing without wasting considerable soap, a simple method of rendering it soft will be useful to many of our readers. Take about a pint of fresh slacked lime, stir it in a gallon of water, and allow the sediment to settle; pour off the clear water, and bottle it tight for use, because, if the air is not excluded, it will absorb carbonic acid from the atmosphere. Half a pint of this lime water is added to a gallon of hard water, stirred, and the whole allowed to settle, after which the clear is filtered through a diaphragm of Canton flannel, and is ready for use, being rendered quite soft. Those who reside in limestone districts, where the wells contain hard water, will find this method of treating it (the water) very useful for washing purposes. If they wish to use this softened water for drinking purposes, a little lemon juice or cider added to it will greatly improve its taste. In the magnesian limestone regions of Ohio, and other places, where the water of the wells, in warm, dry weather, is liable to cause cramps and chills when drank, especially to strangers, the method described for treating it will prevent such results. The fresh slacked lime-water unites with the carbonic acid of the lime in the hard water, and the whole lime, held in solution, falls down in the state of fine chalk, leaving the water clear and soft.

The oxalate of ammonia also softens hard water, but it is not so easily managed as the caustic lime. It is made by saturating oxalic acid (a poison) in liquid ammonia, and for this purpose the oxalic acid should be ground fine, and stirred among the ammonia with a glass rod. A quart of the oxalate of ammonia will soften thirty gallons of hard water. It is stirred among the water, the sediment allowed to settle, and the clear filtered. For drinking purposes, this water also requires a little lemon juice, or cider, to render it pleasant to the taste.

Impure water is oftentimes the cause of disease. The impurities consist either of organic or inorganic substances. It is believed that the foregoing processes are capable of removing both kinds of such impurities.—[Scientific American.

NAVIGATION OF THE UPPER SAN JOAQUIN. From recent developments it seems the Tulare Valley is likely to much easier accessible than has been supposed, which will be likely to attract more attention to its noted agricultural resources. Concerning the capacity of the San Joaquin for steamboat navigation, Capt. Haight of the steamer Henrietta reports that he has no doubt of the practicability of the navigation of the river and the Tulare slough "at all seasons of the year, both as regards distance and depth of water, there being quite as much in low water in the upper San Joaquin, and when the canal company get the ditch completed, it will after the first high water be at least double." From Stockton 150 miles by water, leaves but two days' ox-team navigation to Mariposa city, and one mile and a half from Hornitas, where freight can be shipped to the mines. This route from Stockton can be run by such boats as ply on the upper Sacramento, in two days, being a saving of three days' time to Mariposa, five to Millerton, and six or seven to Visalia.

FREMONT'S DITCH CONTRACT.—The Mariposa Gazette states that the contract made by Col. Fremont with Maj. McNeill & Co., in October last, for the purchase of the route for a ditch leading from the South Fork of the Merced, has not been fulfilled, and the route is now in the hands of the original owners. $25,000 was the price, $2000 of which was paid at the time of contract. The balance not being paid on the 1st of May as stipulated, the contract became void. The recent decision of the Supreme Court, denying Fremont's right to mineral land, is said to be the reason for his giving up the contract.

A NEW QUARTZ MILL on the Merced River has been commenced by Col. Fremont, which, the Mariposa Gazette says, will, when completed, be the largest in the State. It is to be operated by water, taken from the Merced some five miles above by a ditch, and applied to two huge wheels, operating forty-eight stamps. About 1300 feet above the river, on Mount Bullion, are situated the mining establishments of Fremont and of the Merced Mining Company, upon the Pine Tree and Josephine veins, and quartz from these veins will be sent down the mountain in slides, to the mill on the flat at the foot.

ROUP AMONG CHICKENS.—In keeping 600 to 1500 fowls together, a writer in the American Agriculturist found the roup to prevail badly, until he adopted the plan of collecting all his fowls in a hen-house, and building a corn-cob fire which produced a smoke so dense that only objects in a direct line with the window could be seen. The poultry seemed to enjoy the smoke exceedingly; the cocks crowed and the hens sung more than at other times. The smoke cured the chickens. The writer further stated that he had himself been troubled with a throat affection (chronic laryngitis) for fifteen years, but this was cured by being much in the smoke with his poultry.

CHINESE are "filling in" round Mariposa, where those of the male gender are content to realize "one dollar hap" a day. Their theatre at Mormon Bar, the Gazette says is in full blast night and day, and the performances are pronounced by some outside barbarians as well worth seeing.

MISCELLANEOUS.

A. L. EDWARDS & CO.,
NEW STOCK OF CHOICE
GROCERIES,
At 81 Clay street, above Front,

A. L. EDWARDS & CO. HAVE JUST OPENED a fine assortment of
Choice Family Groceries,
which they offer at the lowest rates:

FLOUR—Superior brands of domestic.
CORN-MEAL—Fresh, in 10, 25 and 50-lb sacks.
BUCKWHEAT-MEAL—Hominy, coarse and fine, Corn-starch.
COFFEE—Old Government and Green Java, and superior Rio.
TEAS—Superior fresh Green and Black, in 6, 12, and 30-lb boxes.
CANDLES—Chemical, Sperm, Wax, and best quality Adamantine.
SUGAR—Crushed, Powdered and Brown.
CHEESE—California and Durham Farm.
PICKLES—English and California Pickles, in pints and quarts.
PIE-FRUITS—English and American Pie-Fruits, in glass and tins.
OIL—China Nut-Oil, in tins and jars.
YEAST POWDERS—Preston & Merrill's, Hope Mills and California.
MUSTARD—California, English and French.
OYSTERS—The most desirable brands.
COCOA—Paste, Shells, and cracked Cocoa, Broma, Chocolate, &c.
STARCH—Glenfield Patent.
Mince Meat—in quarts and half-gallon jars.
Cream Tartar and Soda.
Preserves—all kinds Jams, Jellies, Sauces, &c., in glass and tin.
Our customers may rely upon every article sold by us.
The Prices, in every respect, Low.
Goods delivered free of charge to any part of the city.
A. L. EDWARDS & CO.,
10-3m No. 81 Clay street, above Front.

WHEELER & WILSON
MANUFACTURING COMPANY'S
SEWING MACHINES.
343 Broadway, New York.
Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.
Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.
They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.
The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.
H. C HAYDEN, Agent,
157 Sacramento street
9r-7 3m (between Montgomery and Kearny)

JOHN D. ARTHUR,
IMPORTER AND JOBBER OF
Agricultural Implements,
Washington street, near Davis,

HAS just received, by late arrivals from the East, and will continue to receive, a large and varied assortment of AGRICULTURAL GOODS, among which are the following, which will be sold at *the Lowest Market Rates*:
Ox Yokes, assorted sizes (complete);
Ox Bows, best Vermont make, in cases of five dozen pair;
Grind stones, assorted sizes, a large assortment;
Ox Yokes, plain; ox bow-pins; ox chains;
Churns, thermometer and cylinder, assorted sizes;
Steel Garden Rakes, assorted sizes; Potato Hooks and Spades;
Steel Spades, Ames', square; long and short handle Shovels;
Hoes, Tuttle No 1, assorted sizes; California and Planters' Hoes;
Steel Grain and Coal Scoops; Hay Knives;
Crowbars; Sledges; Screw Wrenches; Brushes;
Hay Cutters, assorted sizes; Horse and Wool Cards;
Axes, Hunt's and Collins'; Store Trucks, assorted sizes;
Hay Forks, 2, 3, and 4-tine, Tuttle's and other kinds;
Barley Forks, large; Manure and straw Forks;
Hay Rakes; Barley Rakes, best quality;
Seed-sowers; Cultivators, with steel and cast iron teeth;
Horse Rrakes, revolving and steel teeth;
Farm Wagons, light and heavy; Harness;
Carts and Cart Harness; hames; horse collars;
Canal Barows, best quality, in cases of twelve each;
Winches, for the Mines; Double-trees, three-horse do,
Plows, steel and cast iron, of all sizes and prices;
Plow Points, all kinds; Trace Chains; Post Augers;
Cheese Presses; Cheese Hoops; Well Buckets;
Grain Cradles (Grape-vine and Grant's), extra fingers,
Ax, Pick, Sledge, Fork and Rake Handles;
Corn Mills; Grain Mills; sickles; scythe stones;
Fanning mills, assorted sizes; extra knives; boxes;
Sections, &c, for Reapers; Extra Arms for Thrashers;
Reapers; Mowers; Thrashers; &c., &c.
The subscriber, having purchased and made arrangements for a full supply of Agricultural Implements, in New York and Boston (from whence he has but recently returned), he will be
IN CONSTANT RECEIPT OF
Fresh Goods well adapted to this Market,
By Clipper ships arriving during the season.
Which he can afford and *will sell on as favorable terms* as any other similar establishment on the Pacific coast. Farmers and Dealers will find it for their interest to call and see the subscriber, as his Agricultural warerooms.
JOHN D. ARTHUR,
7-3m 3 and 4 Washington street, near Davis.

SATHER & CHURCH,
BANKERS,
Corner of Clay and Battery streets,
DRAW BILLS OF EXCHANGE AT SIGHT, in sums to suit, as follows:

ON	PAYABLE AT
New York	American Exchange Bank
Boston	Shoe and Leather Dealer's Bank
Philadelphia	Drexel & Co
Baltimore	Johnston Bros. & Co
Cincinnati	A. J. Wheeler, Esq
St. Louis	Haskell & Co., Exchange Bank
Pittsburg	E. D. Jones, Cashier
Louisville	A. D. Hunt & Co
Charleston	H. W. Conner & Co
New Orleans	Benoist, Shaw & Co

....ALSO....
EXCHANGE ON—
London,
Frankfort-on-the-Main, } Germany.
Stuttgart, }
Ship and Insure Treasure,
Under open Policies in the following named offices in New York:
Atlantic Mutual Insurance Company;
Sun " " "
Union " " "
Pacific " " "
Purchase Certificates of Deposit
AND OTHER EXCHANGE,
And transact a general banking business.
P. SATHER,

SATHER & CHURCH
WILL RESUME THE
BANKING BUSINESS,
IN ALL ITS VARIOUS BRANCHES,
From this Date,
AT THEIR OLD STAND,
Corner of Clay and Battery streets.
San Francisco, May 6th, 1859. 1

California Honors Labor.

"Under our form of government [the laboring classes] will control the destinies of this nation."—(Brodbrick.

The word Progress will confirm the sentiments of the Senator from California in his speech upon the Kansas question, where he presents in the most honorable manner, the subject of Labor. His word will be prophetic while thus eulogizing the working classes, however he laments their neglect of those high duties they owe to themselves. But let every workingman in our land read the memorable words of that Senator, embraced in the first paragraph we have quoted, then read the second, and reflect upon it; the youngest Senator in the U. S. Senate with a single exception, the son of a mechanic, born and inured to toil, proud of it for its worth, and standing in the proudest position a man can occupy on this earth, the Senate of the United States; standing there the noble advocate of labor and the laboring classes, his tribute of filial affection to his father does him great honor, and the laboring classes of our State and country must now feel they have a true and zealous advocate for their cause.

We know no party or creed; we are looking for the *good* in all. We know no section of country; we wish the prosperity of our whole country, and we have taken from the speech of the young and able Senator of our own State those paragraphs and sentences, that fill our heart with admiration, for they elevate and honor the toiling man, and this will accomplish everything for our country. When our national and state governments become *parental*, and nourish and foster labor and the laboring classes, when genius, skill and enterprise are justly encouraged and labor justly rewarded by government, we shall then see *"the workingman controlling the nation."*

We now present the extracts to which we have alluded, and ask our readers to bear in mind they were uttered by one who, self-educated, and amid difficulties and obstacles unheard of by any one aiming at the same high elevation, has won his way from the walks of a mechanic's apprentice to his present proud position; and then his first great effort is made in behalf of the laboring men. In this effort he has honored our State, honored the country, the cause he pleads, and highly honored himself:

"I represent a State, sir, where labor is honorable; where the judge has left his bench, the lawyer and the doctor their offices, and the clergyman his pulpit, for the purpose of delving in the earth; where no station is so high, and no position so great, that its occupant is not proud to boast that he has labored with his hands. There is no State in the Union, no place on earth, where labor is so honored and so well rewarded; no time and no place since the Almighty doomed the sons of Adam to toil, where the curse, if it be a curse, rests so lightly as now on the people of California."

"I am, sir, with one exception, the youngest in years of the Senators upon this floor. It is not long since I served an apprenticeship of five years at one of the most laborious mechanical trades pursued by man—a trade that from its nature devotes its follower to thought, but debars him from conversation. I would not have alluded to this, if it were not for the remarks of the Senator from South Carolina; and the thousands who know that I am the son of an artisan and have been a mechanic, would feel disappointed in me if I did not reply to him. I am not proud of this. I am sorry 'tis true. I would that I could have enjoyed the pleasures of life in my boyhood's days, but they were denied to me. I say this with pain. I have not the admiration for the men of the class from whence I sprung that might be expected; they submit too tamely to oppression, and are too prone to neglect their rights and duties as citizens. But, sir, the class of society to whose toil I was born, under our form of government, will control the destinies of this nation. If I were inclined to forget my connection with them, or to deny that I sprung from them, this chamber would not be the place in which I could do either. While I hold a seat here, I have but to look at the beautiful capitals adorning the pilasters that support this roof, to be reminded of my father's talent, and to see his handiwork.

"I left the scenes of my youth and manhood for the far west, because I was tired of the struggles and the jealousies of men of my class, who could not understand why one of their fellows should seek to elevate his condition above the common level. I made my new abode among strangers where labor is honored. I had left without regret; there remained no tie of blood to bind me to any being in existence. If I fell in the struggle for reputation and fortune there was no relative on earth to mourn my fall. The people of California elevated me to the highest office within their gift. My election was not the result of an accident. For years I had to struggle, often seeing the goal of ambition within my reach; it was again and again taken from me by the aid of men of my own class. I had not only them to contend with, but almost the entire partisan press of my State was subsidized by government and patronage to oppose my election. I sincerely hope, sir, the time will come when such speeches as that from the Senator of South Carolina, will be considered a lesson to the laborers of the nation."

As a fitting conclusion to the subject of Labor, we add that glorious song of "Labor," from the gifted pen of Frank Soulé; a poem of the very highest order of merit, and should be committed to memory in the household of every laborer's family:

LABOR.—By Frank Soule.

Despise not labor! God did not despise
The handicraft which wrought this gorgeous globe;
That crowned its glories with yon jeweled skies,
And clad the earth in nature's queenly robe.
He dug the first canal—the river's bed—
Built the first fountain in the gushing spring,
Wove the first carpet for man's haughty tread,
The warp and woof of his first covering.
He made the picture painters imitate;
The statuary's first grand model made;
Taught human intellect to re-create,
And human ingenuity its trade.
Ere great Daguerre had harnessed up the Sun,
Apprenticeship at his new art to serve,
A greater Artist greater things had done,
The wondrous pictures of the optic nerve.
There is no deed of honest labor born,
That is not godlike in the toiling limb,
Howe'er the lazy scoff, the brainless scorn;
God labored first, toil likens us to Him.
Ashamed of work! mechanic with thy tools?
The tree thy ax cut from its native sod,
And turns to useful things—go tell to fools—
Was fashioned in the factory of God.
Go build your ships, go, raise your lofty dome,
Your granite temple that through time endures,
Your humble cot, or that proud pile of Rome—
His arm has toiled there in advance of yours.
He made the flowers your learned florists scan,
And crystalized the atoms of each gem,
Ennobled labor in great Nature's plan,
And made it virtue's brightest diadem.
Whatever thing is worthy to be had,
Is worthy of the toil by which 'tis won,
Just as the grain with which the fields are clad,
Pays back the warming labor of the sun.
'Tis not profession that ennobles men,
'Tis not the calling that can e'er degrade,
The trowel is as worthy as the pen,
The pen is mightier than the hero's blade.
The merchant with his ledger and his wares,
The lawyer with his cases and his books,
The toiling farmer 'mid his wheat, or tares,
The poet by his shady streams and nooks,
The *man*, whate'er his work, wherever done,
If intellect and honor guide his hand,
Is peer to him who greatest state hath won,
And rich as any Rothschild of the land.
All mere distinctions based upon pretence,
Are merely laughing themes for manly hearts,
The miner's cradle claims from men of sense,
More honor than the youngling Bonapartes.
Let fops and fools the sons of toil deride,
On false pretensions brainless dunces live,
Let carpet heroes strut with parlor pride,
Supreme in all which indolence can give;
But be thou not like them, and envy not
These fancy tomtit burlesques of mankind,
The witless snobs in idleness who rot,
Hermaphrodites 'twixt vanity and mind.
Oh, son of toil, be proud, look up, arise,
And disregard opinion's hollow test,
A false society's decrees despise—
He is most worthy who hath labored best.
The scepter is less royal than the hoe,
The sword, beneath whose rule whole nations writhe,
And curse the wearer while they fear the blow—
Is far less noble than the plow and scythe.
There's more true honor on one tan-browned hand,
Rough with the honest work of busy men,
Than all the soft-skinned punies of the land,
The nice white kidery of "upper ten:"
Blow bright the forge, the sturdy anvil ring,
It sings the anthem of king Labor's courts,
And sweeter sounds the clattering hammers bring,
Than half a thousand thumped pianofortes.
Fair are the ribbons from the rabbet-plane,
As those which grace my lady's hat and cape,
Nor does the joiner's honor blush or wane,
Beside the lawyer with his brief and tape,
Pride thee, mechanic, on thy honest trade,
'Tis nobler than the snob's much vaunted pelf,
Man's soulless pride his test of worth has made,
But thine is based on that of God himself.

[For the California Farmer.]

Soul-Life.

"Life here has but begun," truly remarks your fair correspondent *Sallie*. How fearfully immense the thought, that Soul-life has no end. We exist, and on, on, on, and on, roll cycles of ages and still we shall be in existence.

Time may destroy the noblest work of human hands, Earth itself may change or pass away, yet still the soul shall live. But how? Dark and impenetrable as is the vail that overhangs the future world, yet I cannot agree with the views of *Sallie*, that "all on earth is shadow, and that the substance lies beyond." No; there is a reality in Life, a purpose to be fulfilled by every living thing. Progression is as apparent as the noonday light. Wandering amid the fields we behold at the same glance the different forms of vegetable life, from the smallest waving blade to the noblest forest monarch. Before our eyes reproduction is constantly going on; Spring covers the earth with a vari-colored carpet, the Summer's heat brings to maturity the annual productions of the soil, Autumn shrinks and blasts the foliage that has fulfilled its purpose, and it sleeps the winter sleep of death; to wake again when returning spring shall break the icy bonds that confine it in the tomb.

We live; we die; we live again, more perfect in organization, nearer to the Source of Life. Who can doubt that when the body is laid aside, the freed spirit continues on toward the grand centre Life, from which all things emanate, on which all things depend, and to which all things tend? Death, as the sleep that knows no waking, is true of the body only. Nature teaches that life is eternal and progressive. Man, the chief of the animal creation, dreams of a future state, builds up strange systems and creeds, and worships the power that gave him being, in thousands of different forms. The Savage tribes bow low before the shrine of Manitou, the Great Spirit, and believe that he will call them to his happy hunting grounds, where, never will the Palefaces molest them in the pursuit of their favorite sport, or in the possession of their inheritance. The Heathen bend in humble adoration before the eyes of Odin, the altar of Vishnu, and the senseless idols that their own hands have reared. Does not this go to prove that religion is a part of existence, and that an acknowledgment of a Great First Cause is the spontaneous working of the human soul? On a cloudless night, look up, oh Man, from earth, and gaze upon the countless worlds that o'erhang thy dwelling place, and say if thou canst, if *this* is the *only* one which is peopled by intelligent and living beings! Say that all of them were created only to twinkle amid space, and to cause the foolish little worm who gazes at them to wonder why they were made! Absurdity! Open, and read again, the Book of Nature. Does she not show the different stages of Vegetable life? Plainly, does she not teach that all things tend towards perfection? Humanity cannot be an exception. To aid the progress of the human race unto perfection, should be the great end of life. Deep are the mines of Science, and vast fields of research are open to any who will explore them! Rich is the lore of by-gone ages, and sublime the study of the star-gemmed skies. Compare the Natural with the Revealed testimony of Creative Powers, and strive so to live that when the last earthly visitant shall come, he shall find in thee one who has fulfilled the end of his being, who has elevated his race, who waits only an appointment in any other part of the wide, wide Universe, to be ready again to discharge the duties that higher life may require of him.

Soltero.

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN

AND

NURSERY,

On the American River, 2½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE,

embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being

CORRECT AS TO NAMES AND VARIETIES,

are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

v8-18-6m A. P. SMITH.

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS, Daguerreotypes and Melainotypes.

VANCE & CO.,

Corner of Third and J streets,

(Eiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,

9-3m Sacramento.

SEED, PLANTS, &c.

Ornamental Shrubbery.

THE Greatest Variety in the State may be found at the

GOLDEN GATE NURSERY,

Corner of Fourth and Folsom streets,

COMPRISING

5,000 Monthly Roses, of 150 varieties;
2,000 Carnations, of 120 kinds;
500 Monthly Honeysuckles, of 8 varieties;
500 Acacias, of 10 varieties;

Laburnums, Arbor Vitæ, Myrtles, Euonymous, Silver Maples, Mimosa, Clematis, Cytisus, Eucalyptus, Lilacs, Jasmines, Mock Orange, Athæas, Spiræa, Weigelias, Deutzias;

and a general variety of

Hardy and Green House Plants.

☞ Skillful Gardeners provided for laying out grounds. Office at the Nursery, and 171½ Clay street, above Montgomery v7-24

Chinese Sugar-cane Seed.

A PURE and reliable article. For sale in large or small quantities at moderate prices; with a large assortment of **Flower, Vegetable and Agricultural Seeds**, of the choicest qualities, by

JAMES M. THORBURN & CO.

A WISH.

TO MRS. S. S——.

[The annexed affectionate *wish* of "Carrie May," addressed to a dear friend about leaving the East for our land of gold, appeared in the Saratogian, published at Saratoga Springs, New York. That friend has safely reached our shores, and is now most happily domiciled in one of the fairest homes of the Pacific; where by her sunny smiles, cheerful converse, happy temper and tone of mind, she diffuses a radiance of joy and happiness to all around her:]

God speed thee on, my gentle friend,
With fair and sunny skies,
And guard with care thy noble ship,
As o'er the deep she flies.
May Boreas hold his blustering breath
And breathe his gentlest sighs,
To waft thee to that sunny home
Endeared by fondest ties.

And when, with joyous, grateful heart,
On fair Pacific's strand,
Thou'lt meet a welcoming embrace
From thy own kindred band,
Remember there are loving hearts
Within this northern land,
Who pray that time may once again
Bring us thy clasping hand.

SARATOGA SPRINGS, March 4, 1858. CARRIE MAY.

[For the California Farmer.]

The Beautiful Effects of Labor and Industry Among Women.

MESSRS. EDITORS: No woman can truly appreciate life or the beauty of living, that does not understand how to work. Inaction makes the mind and body torpid. It is the chief cause of so much ill health amongst our women of America, whose sphere of life and wealth does not enforce actual labor of a domestic nature. Delicate women, if you wish to be healthy and have rosy cheeks, you should rise early, and take a long promenade before breakfast; or, if possible, have a canter on horseback; that with a cold bath is almost sure to promote good health and a fine appetite. Ladies, when you get out of the public thoroughfare, lay aside your formality and take a short run; you will find a most delicious effect from it. Do not be afraid of exercise and cold water and you never will be sick. I hear so many of my lady friends complaining of headache, backache, &c., that it is painful to listen to them, when one has a sympathizing nature like myself. As for myself, I do not know what sickness is; but I wish to relieve those that are ailing if it is in my power, and have given you, ladies, the best advice possible. Those who are opposed to manual labor and are sick will perhaps follow up the above directions, and in time you may think more favorably of doing your own housework. I see some of the white-hand ladies shudder at the thought of cooking a dinner or doing a day's washing for their household. Ladies, you do not understand nor feel the enjoyment of living, till you make yourselves thorough housekeepers. But if you will not follow my advice, do not complain any more to me of feeling "a little out of sorts." Farewell for the present, ladies.

Working women, how do you do? I know you are well and happy. I have sat down to have a little chat with you. "I am one of you." I work myself, hard, hard, hard. I cook, wash, iron, clean house, take care of my baby, work in my garden, pull up the weeds, carry water to the thirsty plants, and rejoice to think it is my hand that gives them nourishment. They brighten up and cheer me for my toil. I say toil, no it is not toil, it is a pleasure to work. We were made by the great architect to be active; and yet I can always find time to write to my friends, and spare a few hours for social converse with friends of my soul. What is there so beautiful on earth as a home where health and cleanliness and mind prevail. Oh woman, if you would hold fast your husband's affections, keep your household in perfect order, study neatness and simplicity in dress, and always have a kind word and cheerful smile to welcome him to his home, although your heart be breaking. Smiles give no reproach, and in time you will be rewarded. Men often err; it is their nature; but like the dove, a husband will return to his wife as an ark of safety. Be forgiving in your natures, and pass over in quietude any little *faux pas* you may discover. Do not wreck your own and your children's peace for what has always existed, and perhaps always will. Men (*learn this*) are all alike, to a certain extent, in their natures, and it is a lesson all women *must* learn, sooner or later. So women, forgive your husbands, and by kindness and sweet smiles draw them back to their duty. They may err, but a man's heart, as a general thing, remains constant to his wife. Men have more temptation then women to "step aside," and custom and nature make them err. Women, it is your duty to be good and virtuous for the sake of your children and family. Man has to contend with the world; his sensibilities are hardened; he has not naturally that refinement and poetical feeling that is inherent in woman.

Oh! women, did you but know, in your quiet homes, with all the comforts of life provided for you, how much talking, how much anxiety and annoyance your husbands meet with, coming in contact with mean, low-spirited, no-souled men, you would exclaim: *poor husband* many times during the day, as you look about your well-furnished homes, and know that it is through his exertions you are surrounded with the comforts, and perhaps the elegancies, of life. Every business man knows well enough that he must suffer some little humiliation, and perhaps decend to a little chicanery, to make a good bargain; that is allowable amongst business men, to get the best of each other in a trade, and is not considered unfair; yet still it gives an honorable man a slight tinge of conscience, and a feeling of disgust against human nature; and the husband thinks of his home and the pure ones there, and longs for the day to be over to join them, for there he feels there is no deceit; there heart meets heart in comingling rapture. Now wives, will you not make your homes pleasant after this; for a husband throws care aside as he steps upon the threshold of his door; he will not let his care or business troubles annoy you. Oh! wives that have kind husbands to provide for you, it is your duty to give them something in return. They have all the anxiety, you all the profit. Can you do less than make your homes pleasant. By your smiles, neatness, and good housekeeping, throw a magic charm about your liege lords "and keep them there."

Oh! wives, mothers, did you but know how many good and pure women have to struggle, to come in contact with the heartlessness of the world, to throw off the reservedness of woman's nature, to battle for herself, and *strive* and *strive*, and then perhaps get but a scanty subsistence. Think of this (for it is too true) while you are seated in your homes that you have by good luck obtained without exertion.

Oh! women, prize your homes, hold them sacred, be kind to your husbands, to your children, and oh! be kind to the *poor*; while you have plenty, give from your household store. When you sit down to your well-spread table, be thankful and think how little from that table would send a smile to the poor one's face. If it is only one person you relieve, it will be registered on high. The greatest pleasure on earth is to give where it is really needed. Let each one do their part in relieving the necessities of the poor. However little, *give it*; give it with a free heart, and it will come back to you tenfold. This will be another tie to bind you to your husband's heart. Men like and admire charitable feeling in their wives and sisters; and of all things a good principled man likes an industrious woman. I have heard gentlemen of taste and education speaking frequently of women where they called being engaged in domestic affairs, and being clad in a neat, simple calico frock, and how lovely she looked, what a fine color, what bright eyes, and how full of vivacity, what a very charming woman, and how becoming her dress. I would rather see a lady dressed in a plain calico than all your silks and velvets. Such is the opinion of sensible men, such are the men worth having for husbands, and such women are those that men like for wives. The eulogies that I have heard passed upon ladies who wore calico dresses and worked, would make many an overdressed belle die of envy. Labor is enobling; it enriches the physical health, and develops the mind, and keeps the springs of life moving naturally. Give me a working woman; one that is not afraid of soiling her white hands. It does you good to hear her laugh; with what elasticity she steps along; no awkwardness in her gait; every movement perfectly natural; no fainting fits; no headache; no hysterics; and for all she receives she honorably pays; and what is more, the gifts of life that come in her way she enjoys with a hearty relish. She sleeps well, and has a fine relish for her food. The working woman may be poor, but money cannot buy the enjoyments within her reach. The best gifts of God are hers—sun and air. She is not afraid of them; and being in a state of health, induced by labor, coarse food tastes better to her than all the delicacies on the rich man's table, whose wife is too "delicate" to have an appetite, or enjoy what the sumptuous board contains. And then the poor woman's children are all healthy and strong from exercise. The mother has given them strength, and nursed them from her own fountain of life She looks upon her little ones as so many little treasures, more precious than the diamonds in the queen's crown. She values them all; however poor, there is always room for another. She cannot part with one of them. The bread and butter always seem to come to put into their little mouths. *The working woman is the true princess of the earth.* She should be honored, for she is the one who sets an example of industry and perseverance before the community. She is no drag to society. Some of our best and most talented men received an impetus for exertion from their mothers. The example of the mothers made them what they were. Daniel Webster's mother was a working woman, Henry Clay's mother, and other bright names that I could mention.

It is no disgrace to work; it keeps the mind from rust and tarnish. Mothers, it is your duty to work, and set an example to your sons and daughters. Did not our forefathers, and their wives labor? and, when they have left us such a rich legacy, a free country, why should we not labor, if not with our hands, with the mind? There is much to be done, to give our minds free scope, to look with respect on old customs, and, with an unbiassed mind, on new ones. Be liberal in your thoughts, and take a comprehensive view of new things that come to light in this progressive age. Be just in your judgments. Do not think that you are entirely right, or that others may be entirely wrong. Women, I would have you think, reflect, philosophize upon life, for it's but a dream, at the best, and the more liberal and just we are here, the higher in perfection we will be when we awake in the intellectual state of what is termed the other world. Women, why should you make yourselves unhappy, and others with you, by old prejudices, and old customs? You are reasonable beings; think for yourselves; throw the shackles from your minds, and be free; be, what you should be, angel's in earthly forms. I love my own sex. I sorrow for them, when I see the mind of some fair woman with Circe-like spell thrown around by dogmatical rules. As my fair sister, H. E. S., who wields the pen with magic power, to elevate and advance the cause of womanhood, justly remarks, that woman should take her proper stand, and battle for her rights, for they have long been trampled upon. With the aid of H. E. S., and others of my sisters, I call upon them to use their power with the pen. That will make men ashamed, who usurp the situations that women should fill. Men are strong; why should they not turn their attention to agriculture, and leave the selling of pins, and needles, and crinolines, to the females? Oh, men, I blush for you. Yet, still, I have some charity for them. Had they been brought up to work, and had the example of working mothers, you would not see them selling crinolines. Mothers, if you wish to aid your sex, bring your boys up to work.

MARY GLEN.

Educate the Orphan.

THE following interesting letter we received some months since, and in the hurry of the moment it was mislaid, and has just come to hand; although it was not intended for publication, as written, yet it is too good, too valuable, in the suggestions made, not to be given in the original form, and urge upon those who have opportunity to forward such a plan to do so. We can vouch for the source whence it emanates, and we know the lady and her friends would do much to advance the education and success of those placed under their influence, and we truly hope that orphan boys and girls may be educated in the country, and to a country life, in preference. They will be better and happier:

EDITORS FARMER: In the San Francisco papers which occasionally reach us, I notice frequent statements of great suffering among persons just arriving in the country, and who have no means of leaving the city, &c. As you appear to take a sincere interest in all that concerns us farmers, I would beg to suggest to you that this sort of suffering can be alloviated, and, at the same time, the most trying evil under which *we* labor, can, to a certain extent, be also remedied.

I allude to the great want of domestic or indoor help, the labor so readily procured elsewhere, so impossible to find here: that of half-grown boys or girls. We are all, comparatively, new beginners, and there are so many outlays necessary, so much to be paid for out-of-door labor, that few can afford to hire, at anything like the present prices, a servant woman. Just imagine, then, the excessive fatigue that falls upon the mistress of a family! Not only the cooking, washing, and the usual domestic labor, but churning, care of dairy, &c. Now, could we procure girls, or boys, from nine to thirteen years, to "bring up," caring for them, teaching them, doing by them as if they were our own, they could find healthful employment, could wash dishes, bring in wood, sweep, nurse the babies ("God bless 'em") and, at the same time, be placed in situations to improve, morally and mentally. I would engage to procure good places for any number, almost, of poor orphans, or the children of families in distress. I suffer much from the want of such help in my own family. MARIE.

Old Maids.

"One story's good, till another's told."

WE give the chapter upon the theme named above, and which we promised last week, from the pen of "Alice" versus O. C. H., and although it is very severe, savoring of irony, and a little too uncharitable (can't help saying so, Alice), yet, we feel assured, our correspondent from the other side of the *pond* will respond to Alice in such a way that she will find a slight ripple may be moved upon the surface of these waters, and she may feel a spray or a sprinkling of argument she little dreams of. Sallie does *not* belong to the Green Mountains, but hails from the "Excelsior State," and if Alice could only see the mild reproving of Sallie's "bonnie blue een," or could note the "tinge of the rose" upon her fair cheek, as she reads the severe thrusts of Alice upon that class of her sex to whom no mercy has been shown, we rather guess Alice would feel that she had thrown down her glove to the wrong knight. But we shall see ere long. A response *will* come, for Sallie wields a pen that is moved by *heart principle*; so look out, Alice, a storm is gathering for you that will shake the tallest pines that now shelter you, even away up in the bold and threatening sierras.

To Sallie.

Well, really, I little thought, when I had my chat with the Colonel's correspondents, on Thanksgiving eve, in my own cabin home, hid away in the sierras, that Sallie across the *pond* was going to take exception to what might have been said; and splutter in such a manner as the few sunny strokes of her pen will testify. Now, Sallie, I am, as everybody knows, a plain, matter-of-fact sort of a matron, and want to talk to you, this evening, just as though you sat right down beside me, looking right into my eyes, while I am telling you what I think about "old maids" in general. I am sorry you went dancing tip-toe upon the well-meaning plan of my sketch upon matters and facts just as they are.

Had I known that you were bowing under the burden of well remembered sorrows, and had turned the last corner of sweet maidenhood, I should have used the balm of gilead of consolation more profusely, than to have spoken so disparagingly of "nursing puny kittens, poking the fire, gathering garden seeds," and the like of that. Pshaw, Sallie! I might have known your style of writing savored of old maidism, and that you had been on the watch-tower of expectation for paper bullets; for Vermont has gained a strange notoriety, throughout all Yankeedom, for the bravery of its "Green Mountain" boys, and the remarkable number, quality, and quantity of its old maids, that are reported to be as numerous as the pearls in Jersey river, who are not worth a pint of pigeon's milk on the stage of existence, to comfort and cheer one on in the rugged journey of life. It is all very nice to talk of an old maid's kindness by the sick couch; telling the grumbling patient, by the way of aggravation, of "tall grass, old woods, and wild flowers," through which they have wandered, just to excite the curiosity, when pinned down to the bed by the hand of disease. For my part, I would rather have a sweet little sister, or a patient, loving mother, with her muffled footsteps, in my sick room, to "woo the heart to pleasing thoughts and memories," than a stage-load of your Sallie Marias, Betsey Janes, Laura Matildas, and Peggy Malindas, with their old brown wigs, a wart on their nose, faces drawn out as long as the moral law, as yellow as a saffron flower, as wrinkled as a cow's horn. I should certainly fall into a relapse, to have one of these pictures of ancient antiquity looking at me with her cold gray eyes, and her long front teeth curling down over a downy substance, like the pet mustache of a New York dandy. This quintessence of rusted faculties, and wasted hopes, Sallie, isn't good for nervously constituted persons, like myself, nor worth a tomato seed for raising sponge-cake. Though I can't blame you for taking their part, or espousing the cause of single blessedness, for misery loves company, and will have it, sometimes, if reduced to the necessity of playing with toads and snakes, didn't you know the golden moments, on the stream of life, rush quickly past us, and sometimes leave nothing but the sediments and sand where, once, so much beauty and loveliness lived? I would rather have a fine-looking husband, with handsome eyes and whiskers, under whose strong arm of manly protection I might nestle in safety, when the wild storm of the world howled without, than to be the finest looking old maid in all Christendom. And then to feel the heart-strings softly tremble and vibrate with love—the holiest passion that ever slept in the secret chambers of a woman's soul. The Holy Writ sanctions matrimony, and love begets love, as surely as the clear waters of the gentle, wandering river mingle with that of the briny deep. Did an old maid ever feel the thrilling ecstacies that play around the joyful heart of a young mother, when, for the first time, a pair of little, cherry lips articulate "ma," and, in after years, feel the golden foliage of soft ringlets fall over her maternal face and bosom, from a sweet daughter of eighteen, who is smothering her with dear little kisses? Ah! would ye exchange this heaven-born blessing, for such an arctic winter and frigid love as lives beneath the brown stuff gown of an old maid, where the icicles cluster around her heart like the frost of ages, to sour the milk of human kindness? Did you ever hear of an old maid looking like a Hebe, as beautiful as a Helen, or a Calypso, who lived in a mermaid's grotto, and wove with a golden shuttle? Only think of it. Verily, verily, I say, *no!* Why, only the other day, I asked Ralph Clinton, our next door neighbor, a young man with $50,000, why he did not marry, as he had a good home, a good disposition, and all the requisites for domestic happiness? and his reply was this. "There is no one in the neighborhood, but a young miss of twelve, and Old Maid Saunders, whom I would not marry if she possessed the horded wealth of a Rothschild, or all the hidden treasures of the mountains. I would sooner be hugged by a young grizzly, than to have those long, yellow, fleshless arms thrown around my neck. Why, Mrs. H., I would rather go down to Nicaragua, filibustering, take strychnine, or be pitched head first into an old nest of yellow jackets, than to be driven through life in the same matrimonial yoke with herself. And, for the good of the country, President Buchanan ought to build an underground railroad, and banish the whole posse to Nova Zembla, the Cannibal Islands, or some other 'out of the way place,' as I can't see what on *arth* they are good for." So, Sallie, you see that, even here in California, where women are as scarce as virtue and reason, old maids are at ten per cent discount, and my advice to you is this: Dismantle the mind of all gloom, dry the unbidden tear, don't follow the hearse of Hope any longer; get married, by all means, and love some chap within an inch of his life; love him with that "double distilled devotedness" all the rest of your days; concentrate your affection upon some good fellow that will love you in return as well as flies like honey. Try this antidote for a year, and see if old maidism enlists all the sympathies of the soul then. Your parents cannot always live to take care of you, and, then, if you have not money, you'll go from place to place, from house to house, and, when old age comes creeping on, be fed, at last, by the hand of common charity. 'Tis true you may draw a blank instead of a prize, and the events become as tangled as a skein of eels; because experience is a bitter lore, don't be afraid to try it; each joy in life is brighter, when with another, and enchantment has often woven its spell of strange beauty around many a vine-clad cottage, where gilded ambition sleeps, and soft pity, and meek charity sat as sentinels by the happy doorway. ORDELLE C. HOWK.

Read This! Read It!!

E. B. DAVIDSON,

At His Store, Fourth street, near K, in the Old Dawson House—*SACRAMENTO,*

HAS on hand and offers for sale, at the Lowest Cash Prices, wholesale and retail:

FROM THE ATLANTIC.

SATURDAY, May 15, 1858.

The P. M. S. Co.'s steamer John L. Stephens arrived at this port this morning at 9 o'clock, bringing a very large number of passengers.

DEATH OF COL. BENTON.

Hon. Thomas H. Benton died at Washington, on Saturday, the 10th of April. A Washington dispatch says:

Col. Benton's spirit took its flight gently and tranquilly this morning at about thirty minutes past seven o'clock. He was conscious and calm. He was 76 years and 27 days old when he died.

The supposed time of Mr. Benton's death was 7:35, though he glided off so gently that it may have been a few minutes earlier. Last evening, when Mr. Appleton called, he was too exhausted to converse, and merely signified "to-morrow." At times through the night he was seized with spasmodic pains of great violence, otherwise he rested gently. His last connected words were about 2 this morning, when Jacob, his son-in-law, who was sitting up, asked how he felt, to which he faintly whispered, "Comfortable and content."

His sustenance for three weeks past was hardly sufficient for an infant, and it may be that his life was prolonged by the effort of the will only. His constitution was sound in every respect, and the disease which precipitated his death was strictly local, being cancer of the rectum.

The funeral took place at 2 o'clock on Monday, April 12. The service was simple and imposing. There was no pageant of any sort. The President, members of the Cabinet, Judges of the Supreme Court, the diplomatic corps, a large representation from the Senate and House, distinguished officers of the Army and Navy, and eminent civilians, attended

PACIFIC RAILROAD BILL.

Mr. Benjamin of Louisiana made a motion to postpone the further consideration of the Pacific Railroad bill until December, which motion, after an earnest debate, was carried, 25 to 22. In the House, the greater part of the session was consumed in the consideration of private bills.

TERRITORY OF SIERRA NEVADA.

Judge Crane, the delegate from the proposed new Territory of Sierra Nevada (Carson Valley), has managed to steer clear of the Kansas imbroglio, and his bill may possibly pass. The President sent to Congress a special message, recommending its passage, and the committee is expected to report the bill.

[Letter from our regular New York correspondent B. will appear next week.]

NEWS FROM SALT LAKE.—By the steamer Senator from the Southern coast, important news has come to hand from Salt Lake, to the effect that the Mormons have abandoned the city to the United States Army. The Los Angeles Vineyard, of May 8th, says:

The U. S. Marshal arrived here on the 3d of May. The Mormons have left Salt Lake City. Gov. Cumming, in company with Col. Kane, arrived from Camp Scott about the 4th of April. Brigham Young was at Provo, fifty miles this side of Salt Lake City. A grand Council was to be held at Provo on the 6th of April, that being the anniversary of the commencement of Mormon worship in 1830. Captain Hunt writes that at the Council the future policy and plans of the Saints will be determined. Amasa Lyman, one of the original purchasers of San Bernardino, with about three hundred men, divided into small parties, left about the 1st of April, on a tour of exploration towards and into the Apache country. The Deseret News was suspended; the last number was issued on the 7th of April, on a reduced sheet. It makes no mention whatever of any movement or change. Almost daily, since the 20th ult., Mormons, formerly residents of San Bernardino, arrive at that place, and are desirous of purchasing the places they sold under the excitement of the gathering together of the Saints at their Mount Zion.

The Star, of May 8th, contains extracts from various letters received at Los Angeles from Salt Lake. A letter dated Farmington City, sixteen miles north of Salt Lake City, says: 'We are now ordered to move south of Provo, from the settlements north of Salt Lake City, and that city is to be vacated and burnt down forthwith, in order that Colonel Johnson and his men may come in and fulfill the orders of the Government in establishing a military post there. There is a regular breaking up, and it is going to be rather hard with all. The word generally is, that they intend to locate in San Pete Valley."

Messrs. Fulton and Swichel, two immigrants just arrived from Salt Lake, furnish the Placerville Index with some additional items: Messrs. Fulton and Swichel, together with a company of forty-two men, left Salt Lake Valley on the 13th of April. They fully corroborate the statements which have been already made in relation to the movements of the Mormons. At the time these gentlemen left, the Saints were already rapidly evacuating the city and valley. Their policy was not to destroy the city, but leave the houses for the use of the U. S. troops. The truth is, they are afraid to destroy their towns, or commit any further devilment, lest Uncle Sam may follow them in their southern begira.

Fulton says, that the Mormons are temporarily removing into Iron county, in the extreme southern part of Deseret, but that their ultimate destination will probably be in some part of Sonora.

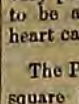
Brigham is constantly in dread of his flock deserting him, and his policy is to get every living soul out of the valley before the arrival of the United States troops.

A LUSCIOUS PRESENT.—While at Marysville the present week, we were called upon by E. A. Thayar, Esq., Esq., from Oroville, who most courteously presented us with a large basket of Peabody's Hautboys. The fruit was large and fine; and we learn that Mr. Thayer has gathered about 100 pounds per day for a length of time. We ate with a keen relish, and we also placed them in the hands of friends, where they are safe, and where they will give much pleasure.

THE people of Tulare Valley, says a correspondent of the Mariposa Democrat, are in a very prosperous condition. The crops promise to be abundant, and in fact, everything the heart can desire is here to be found in plenty.

The Patent for the Rancho del Molino, for four square leagues—17,752 acres—located on the Russian River, in Sonoma County, was received from Washington by the last mail steamer.

MERCHANTS' HOTEL,
MARYSVILLE.



THIS OLD ESTABLISED HOUSE, in order to meet the demand upon its increasing business, has recently been enlarged by the addition of a number of NEW AND ELEGANT FAMILY ROOMS, a new Promenade Gallery of Two Hundred Feet in length, and has been otherwise renovated and improved, making it one of the largest and most commodious, as it always has been the most quiet and orderly Hotels in the country.

The Proprietor, in returning thanks to the Merchants, Business Men and Citizens of Marysville, and to a large portion of the Traveling Public for their generous patronage, assures them that no pains or expense will be spared to make this permanently, in all that constitutes a First-class Hotel, the best in the city.

The Merchants' Hotel employs no runners. It is located on **First street, near the New Bridge,** on the Yuba river, where the Proprietor (always on hand), will attend personally to the wants of his customers, and hopes and expects the same liberal patronage the House has always received from a discriminating public.

J. H. WRIGHT & CO.,
v9 18-3m Plaza, Marysville.

SPECIAL NOTICES.

☞ **HOUSEKEEPER WANTED.**—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings too numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14d

☞ **Wigs! Wigs!! Wigs!!!**—BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.
v8-13 1y 233 Broadway, New York.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not failed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York." E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

THE HAIR! THE HAIR!!

WHAT Lady or Gentleman would be deprived of a beautiful head of Hair, when by the use of LYON'S KATHAIRON such an one can so easily be had? Too much value cannot be placed on a fine head of Hair—not only as an adornment to the person—and no person is well dressed without well-arranged Hair—but, also, as intimately connected with the general health of the body—for this connection is much closer than is generally supposed. The KATHAIRON preserves and beautifies the Hair, making it soft, curly, and glossy; and by its cleansing and invigorating properties, gives tone and elasticity to the whole system. Sold everywhere for 25 cents per bottle.
HEATH, WYNKOOP & CO.,

63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
15 1m *San Francisco, California.*

☞ **Wistar's Balsam of Wild Cherry.**—The following letter from Rev. Henry Wood, of Concord, N. H., editor of the Congregational Journal, speaks volumes in favor of WISTAR'S BALSAM:

CONCORD, N. H., March 2.

Messrs. Seth W. Fowle & Co—Gentlemen: Two years ago, a sudden and violent attack upon my Lungs confined me to my bed for several weeks, and, when I recovered, I was so much oppressed by difficulty in breathing, that I was often unable to sleep or rest upon a bed by night. The suffering was extreme, and, judging from the inefficacy of the remedies used, I supposed the disease incurable. Being persuaded to try a bottle of WISTAR'S BALSAM OF WILD CHERRY, without confidence in its efficacy, I found the difficulty almost entirely removed before one bottle was used up. Sympathy with my fellow-sufferers induces me to make this public statement, and recommend the article to others similarly afflicted.

With respect, yours truly, HENRY WOOD.

None genuine unless signed I. BUITS on the wrapper.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 15-1m

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**
Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

☞ **Farm Stock.**—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds, and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

Thorough-bred Devon Cattle,		French Merino	do
Shorthorns	do	Spanish	do do
Thorough-bred Ayrshire	do	Cotswold	do do
Suffolk and Essex Pigs.		Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention, and we shall be happy to correspond with any and all upon the subject. Address
2 WARREN & CO., Cal. Farmer Office.

☞ **REGISTRY OF STOCK.**—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public, and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a
FIRST-CLASS HOTEL,
in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,
with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprize has been received by a discriminating public, in a constantly increasing patronage of the
FIRST RESPECTABILITY,
showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.
A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

Some of the Patrons of the Hotel International:

SPLENDID BLOOD STOCK.
A RARE OPPORTUNITY
FOR
PURCHASERS OF FINE STOCK.

The undersigned, having determined to return to the Atlantic States, at an early day, proposes to offer at
PUBLIC AUCTION,
the entire lot of
FULL BLOOD STOCK,
which he has imported from the East, within the past two years, together with their progeny.

This collection was selected by himself, personally, from the very best stock-raisers in the Eastern States, and he is prepared to show the pedigrees of all the animals, so as to secure to purchasers the satisfaction of having pure stock.

This collection consists of fourteen head, as follows:

The noble Bull Calf, "SNOW BALL," by imported Bull "Bob Letcher."

"KENTUCKY BELLE," the finest heifer that could be purchased in Kentucky, and which is admitted to be unsurpassed. Sire, imported bull, "Prince Albert."

"LADY JANE," 3 year old heifer, bred and raised upon the farm of the Hon. Henry Clay. "Lady Jane" has a BULL CALF by her side, of rare promise.

☞ In addition to these I shall offer:

One two-year old BULL, two YEARLINGS, and COWS, COWS with CALVES, and other YOUNG STOCK.

This entire lot of animals was selected by the undersigned for the express purpose of improving the Stock of the State, and was driven over the Plains with care. It was the best Stock that could be procured in Kentucky. Full pedigrees will be furnished at the sale to all purchasers.

Every information needed, relative to the Stock, will be cheerfully given by the undersigned, where the Stock can be seen.

The sale will take place at the
Horse Market, Sacramento,
On the 15th of MAY, at 10 o'clock, A. M.
S. W. LONG,
PUTO CREEK, Solano county.

P. S. Information of the Stock, its character, value, and reference, can be had at the CAL. FARMER office.

Austin's Patent Wooden Fan
WINDMILL.
THE undersigned has secured his PATENT for the
NEW WINDMILL
invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSTIN,
PATENTEE,
STOCKTON, Cal.
N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. (14) J. A. A.

State Agricultural Society's PREMIUM LIST

AND

RULES FOR THE

ANNUAL FAIR

AT

MARYSVILLE,

August 23d, 24th, 25th, 25th, 27th and 28th,

1858.

I.
Farms, Orchards, and Vineyards.

Competitors in this department must, in order to insure the attention of the Visiting Committee, give notice of their intention, and make the proper entry, at the Office of the Society, before the first of June. This being done, the Committee will spare no pains to make the *time* of their examination accord with the wishes of those competing.

Grain Farms will be arranged in three classes, according to the number of acres each may contain. Circulars, containing full particulars pertaining to entry will be forwarded to all applicants for the same.

Address D. C. WHEELER, Corresponding Secretary, State Agricultural Society, corner of Sixth and J streets, Sacramento.

Discretionary Premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of Premiums.

Each Committee is authorized to *recommend*, but not to award, Special Premiums upon objects which properly belong to the class assigned to it.

The Judges appointed will, in every instance, *withhold Premiums on animals or articles that, in their opinion, are not worthy, though there be no competition*; and no stock of inferior quality will be admitted within the ground.

The Managers of the Society will be present during the Fair, to give all general directions, and forage will be furnished gratis for animals entered for premiums.

Abbreviations used in this Schedule.—GM, Gold Medal; SM, Silver Medal; FD, Framed Diploma; D, Diploma; Pl, Plate; B, Book.

X.
Agricultural Implements.

All manufactured articles and implements must be entered and placed on exhibition before the 22d day of August, and remain until the close of the Fair.

No Premiums will be awarded for manufactured articles not produced in California, yet the Society will be happy to place such articles on exhibition with the names of the importers or exhibitors.

XV.
CATTLE SHOW.

The Cattle Show will be held in the City of Marysville, very near the Fair Grounds.

Competitors are required to forward to the Office a list of the animals intended to be exhibited, on or before the 10th day of August, in order that proper stalls may be provided.

Stock must be on the ground before 10 A.M. of August 23d, when proper places will be assigned them; and no animal will be permitted to leave the stall between 10 A.M. and 4 P.M. on any day of exhibition. A want of compliance with any part of this rule, will forfeit all claim to a premium.

The Regulations to be made by the Judges.

The Executive Committee have availed themselves of the experience of their predecessors, and of the best information within their reach, and yet the foregoing Schedule is, perhaps, imperfect. It has been found impracticable to maintain what many will regard as a just *proportion* in the arrangement of the Premiums. In explanation of what otherwise might seem an absurdity, it should be understood that there are to be three sizes of Medals—both of the Gold and of the Silver. The Gold Medals will be rated at $50, $30 and $20: the Silver at $15, $10 and $5.

Suggestions from persons of experience, especially in the department of *Mining*, will be thankfully received, and may still be adopted.

RULES,

For the Government of the California State Agricultural Society's Annual Fair at Marysville, 1858.

Rule I.—Each member of the California State Agricultural Society will be furnished with a badge of membership, upon payment of the membership fee of ten dollars, and will be expected to wear the same during the Fair, and which shall not be transferable. This badge will admit the ladies of his family, and children under fifteen years of age.

Rule II.—Price of single admission, to the Fair or Cattle Show, fifty cents. Single admission to both, one dollar. Season tickets, admitting a gentleman and lady to all the exercises at the Hall, and at the Show Ground, five dollars. Season tickets, admitting one person, as above, three dollars. Clergymen, editors, and delegates from Agricultural Societies, will be presented with a complimentary card of admission, on application at the Secretary's office.

Rule III.—Any person desiring to send articles or animals for exhibition at the State Fair, on producing a certificate of membership of the State Agricultural Society, for the present year, will receive a free pass for said articles or animals on any steamer belonging to the California Steam Navigation Company. Any such pass, having been countersigned by the President or Secretary of the Society, will entitle the bearer to return the articles or animals, enumerated therein, on the boats of the Steam Navigation Company, free of charge.

Rule IV.—All exhibitors, who intend to compete for the premiums of the Society, should become members of the same, and have their articles entered at the office in Marysville, at or before 10 o'clock A.M. on Monday, August 23d, without fail, so that they may be arranged in their respective departments, and in readiness for examination, by the Judges, on Tuesday, at 10 A.M.

Rule V.—The Society will not be responsible for the omission to exhibit any article or animal not entered strictly in accordance with its rules.

Rule VI.—No article or animal, entered for a premium, can be removed or taken away, without special permission, before the close of the exhibition. No premium will be paid on articles or animals removed in violation of this rule.

Rule VII.—All articles and animals, entered for exhibition, must have cards attached, with the number, as entered at the Secretary's desk; and exhibitors, in all cases, must obtain their cards previous to placing their articles or animals on the Fair grounds.

Rule VIII.—Those who wish to offer animals or articles for sale, during the Fair, must notify the Secretary of such intention at the time of entering.

Rule IX.—The Executive Committee will use every precaution in their power for the safe preservation of all articles and stock on exhibition. Exhibitors must give their attention to their articles or animals during the Fair, and at the close of the exhibition attend to their removal.

Rule X.—Judges will be selected with reference solely to the highest order of fitness, provided always that no person will be permitted to act as Judge in a department where he is a competitor.

Rule XI.—In no case can the Judges award special or discretionary premiums, but will recommend to the Executive Committee any articles in their class which they may deem worthy of special notice, and for which a premium has not been offered.

Rule XII.—The Judges on Animals will have regard to the symmetry, early maturing, thorough breeding, and characteristics of the breeds which they judge. They will make proper allowances for the age, feeding and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

Rule XIII.—No stock of inferior quality will be admitted within the grounds. A committee will be appointed to rule out all below a medium grade.

Rule XIV.—Animals, to which premiums have been awarded, must be paraded around the track, under the direction of the Marshal, that visitors may see the prize animals.

Rule XV.—No person will be allowed to interfere with the Judges during their adjudications.

Rule XVI.—The several Superintending Committees will give particular direction to all articles in their department, and see that all are arranged in the best order possible, to lessen and facilitate the labors of the Judges in their examinations.

Rule XVII.—The Superintendents will attend each set of Judges, in their respective departments, and point out the different articles or animals to be examined; will attach prize cards to the articles, or flags to the successful animals, after the reports of the Judges have been made up and delivered to the Chairman of the Executive Committee.

Rule XVIII.—The Judges will withhold pre ums n animals or articles which, in their opinion, are not worthy.

Rule XIX.—The Chief Marshal, with efficient aids, will be in attendance during the hours of exhibition, to keep proper order.

Rule XX.—Animals, when duly entered, will be well provided for by the Society, without charge to the owner, and cannot be removed except by permission of the Executive Committee.

Rule XXI.—All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignees, to or for whom only premiums of such articles will be awarded.

Rule XXII.—Every machine or implement offered for a premium must be so designated or described as to identify it to future purchasers, and also the selling price of the article must be stated and marked on the labels and in the published report of premium articles.

Rule XXIII.—Efficiency, cheapness and durability will be regarded as chief excellencies in every machine or implement.

Rule XXIV.—All articles under the head of Mining Implements must be accompanied by a full description of the same; and all specimens under the head of Minerals, or Mineral Products, must be accompanied by a statement showing where and when procured, together with such other information as will tend to aid the Judges in making judicious awards.

Rule XXV.—The Chief Marshal will call the Judges at 10 o'clock on Tuesday morning, assemble them at the Secretary's rooms, furnish them with blank books, in which to register their awards, and have the Judges conducted, by the Assistant Marshals, to their respective departments of the Exhibition.

Rule XXVI.—The Marshal and his Aids will give daily and constant attention to the several departments, and see that each of the above rules is strictly enforced.

Rule XXVII.—All *regular* premiums will be announced and delivered to their respective claimants, with appropriate exercises, before the close of the Fair.

Rule XXVIII.—A suitable person will be chosen in each department to superintend the carrying out of the arrangements of the Executive Committee.

Rule XXIX.—Parties to whom premiums in money have been awarded, shall have the choice to receive the same in money, silver plate, or diplomas.

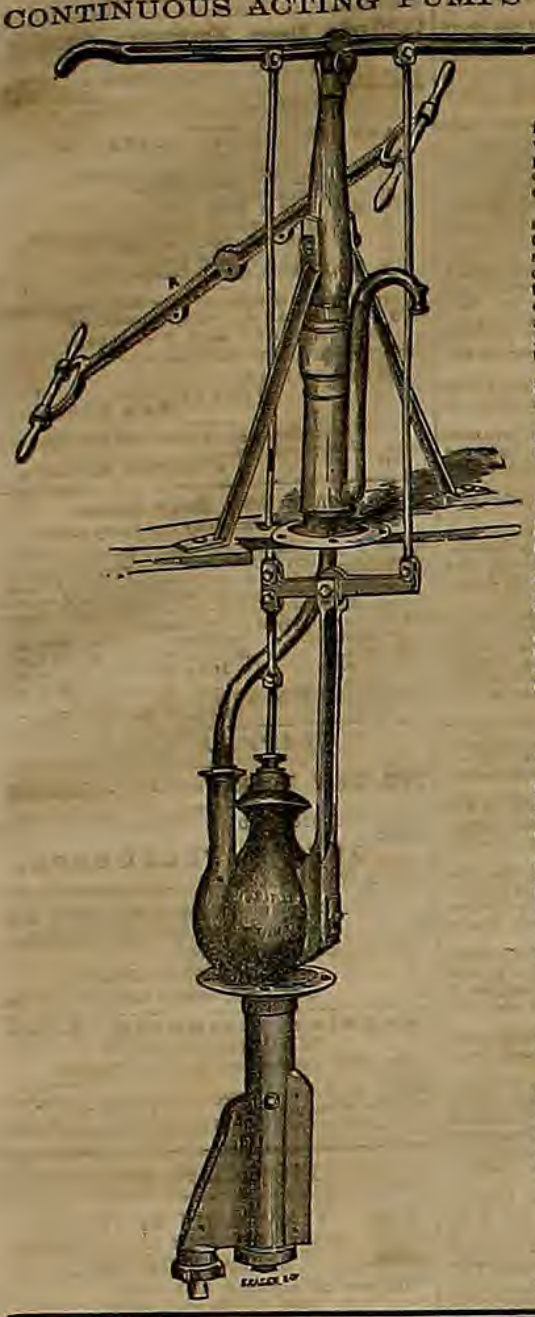
The undersigned believe that all who visit the ANTELOPE will find it what it should be, a Genteel

CONTINUOUS ACTING PUMPS FOR DEEP WELLS.



The annexed cut represents an arrangement of Pumps for drawing and forcing water from deep Wells, which may be used with either a single or double lever. The standard or upper part is placed upon the platform at the top of the Well; the cylinder, with the air-chamber attached, is bolted to a plank, and placed in the Well, within fifteen or twenty feet of the water (the nearer, the easier will the Pump work).

The air-chamber is connected with the standard by lead pipe, as represented, and the water is discharged at the surface by the spout. By attaching a hose, by means of a coupling, to the spout, the water may be thrown in every direction, seventy-five or eighty feet; serving to irrigate gardens, etc., as well as to protect buildings from Fire. Discharge, at each stroke up or down, forty-two cubic inches.

By lengthening the lead pipe and connecting-rods, these Pumps may be used in Wells of any depth.

Read the following, from among many certificates given voluntarily by those who have had them in use:

NAPA, October 14, 1857.

J. S. PAXSON—*Dear Sir:* The Deep Well Force Pump, Number 10, which you sent me a month ago, works admirably, doing all that you said it would. It raises water from a well fifty-three feet deep, discharging in a steady stream. It is the easiest working pump I ever saw. My little son, seven years old, can pump one hundred gallons at a time, without feeling tired or stopping to rest.

Good as this pump is I would much rather have had the Double Pump, Number 16, but my well, being too deep, would not allow me to use it. I shall take much pleasure in recommending your pumps, which I can do with much confidence.

Very truly yours,
(Signed) BOON FLY.

FORT VANCOUVER, Jan. 20, 1858.

JOS. S. PAXSON, 48 Cal. street, San Francisco:

Dear Sir: The Patent Double Acting Lift and Force Pumps, furnished this post, through Messrs. Allen & Lewis, your Agents in Portland, give entire satisfaction, and they are, in my estimation, superior to any Pumps I ever used.

The Deep Well Pump, Number 10, raises water from a well one hundred and ten feet, and works so easily that two men readily pump a barrel full in a minute and a half, and, by attaching the hose, they throw the water, in all directions, fifty or sixty feet.

It gives me much pleasure to add my testimony in favor of your improved Pumps.

Yours, &c.,
(Signed) RUFUS INGALLS,
Capt. U. S. Army.

The above are for sale, together with many other patterns of my Improved Double Acting Force Pumps, by

J. L. POLHEMUS
DRUGGIST

J. [illegible] St.

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Principal Office and Manufactory, No. 96 ARCH STREET Philadelphia, Pa.

For sale by all Druggists in California and elsewhere.

State Agricultural Society's PREMIUM LIST

..AND..

RULES FOR THE

ANNUAL FAIR

..AT..

MARYSVILLE,

August 23d, 24th, 25th, 25th, 27th and 28th,

1858.

I.
Farms, Orchards, and Vineyards.

Competitors in this department must, in order to insure the attention of the Visiting Committee, give notice of their intention, and make the proper entry, at the Office of the Society, before the first of June. This being done, the Committee will spare no pains to make the time of their examination accord with the wishes of those competing.

Grain Farms will be arranged in three classes, according to the number of acres each may contain. Circulars, containing full particulars pertaining to entry will be forwarded to all applicants for the same.

Address O. C. WHEELER, Corresponding Secretary, State Agricultural Society, corner of Sixth and J streets, Sacramento.

Discretionary Premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of Premiums.

Each Committee is authorized to recommend, but not to award, Special Premiums upon objects which properly belong to the class assigned to it.

The Judges appointed will, in every instance, *withhold Premiums on animals or articles that, in their opinion, are not worthy, though there be no competition*; and no stock of inferior quality will be admitted within the ground.

The Managers of the Society will be present during the Fair, to give all general directions, and forage will be furnished gratis for animals entered for premiums.

Abbreviations used in this Schedule.—GM, Gold Medal; SM, Silver Medal; FD, Framed Diploma; D, Diploma; Pl, Plate; B, Book.

XV.
CATTLE SHOW.

The Cattle Show will be held in the City of Marysville, very near the Fair Grounds.

Competitors are required to forward to the Office a list of the animals intended to be exhibited, on or before the 10th day of August, in order that proper stalls may be provided.

Stock must be on the ground before 10 A.M. of August 23d, when proper places will be assigned them; and no animal will be permitted to leave the stall between 10 A.M. and 4 P.M. on any day of exhibition. A want of compliance with any part of this rule, will forfeit all claim to a premium.

For the best Pacing Horse		$100
2d best do do	framed diploma	

The Regulations to be made by the Judges.

The Executive Committee have availed themselves of the experience of their predecessors, and of the best information within their reach, and yet the foregoing Schedule is, perhaps, imperfect. It has been found impracticable to maintain what many will regard as a just *proportion* in the arrangement of the Premiums. In explanation of what otherwise might seem an absurdity, it should be understood that there are to be three sizes of Medals—both of the Gold and of the Silver. The Gold Medals will be rated at $50, $30 and $20: the Silver at $15, $10 and $5.

Suggestions from persons of experience, especially in the department of *Mining*, will be thankfully received, and may still be adopted.

RULES,
For the Government of the California State Agricultural Society's Annual Fair at Marysville, 1858.

Rule I.—Each member of the California State Agricultural Society will be furnished with a badge of membership, upon payment of the membership fee of ten dollars, and will be expected to wear the same during the Fair; and which shall not be transferable. This badge will admit the ladies of his family, and children under fifteen years of age.

Rule II.—Price of single admission, to the Fair or Cattle Show, fifty cents. Single admission to both, one dollar. Season tickets, admitting a gentleman and lady to all the exercises at the Hall, and at the Show Ground, five dollars. Season tickets, admitting one person, as above, three dollars. Clergymen, editors, and delegates from Agricultural Societies, will be presented with a complimentary card of admission, on application at the Secretary's office.

Rule III.—Any person desiring to send articles or animals for exhibition at the State Fair, on producing a certificate of membership of the State Agricultural Society, for the present year, will receive a free pass for said articles or animals on any steamer belonging to the California Steam Navigation Company. Any such pass, having been countersigned by the President or Secretary of the Society, will entitle the bearer to return the articles or animals, enumerated therein, on the boats of the Steam Navigation Company, free of charge.

Rule IV.—All exhibitors, who intend to compete for the premiums of the Society, should become members of the same, and have their articles entered at the office in Marysville, at or before 10 o'clock A.M. on Monday, August 23d, without fail, so that they may be arranged in their respective departments, and in readiness for examination, by the Judges, on Tuesday, at 10 A.M.

Rule V.—The Society will not be responsible for the omission to exhibit any article or animal not entered strictly in accordance with its rules.

Rule VI.—No article or animal, entered for a premium, can be removed or taken away, without special permission, before the close of the exhibition. No premium will be paid on articles or animals removed in violation of this rule.

Rule VII.—All articles and animals, entered for exhibition, must have cards attached, with the number, as entered at the Secretary's desk; and exhibitors, in all cases, must obtain their cards previous to placing their articles or animals on the Fair grounds.

Rule VIII.—Those who wish to offer animals or articles for sale, during the Fair, must notify the Secretary of such intention at the time of entering.

Rule IX.—The Executive Committee will use every precaution in their power for the safe preservation of all articles and stock on exhibition. Exhibitors must give their attention to their articles or animals during the Fair, and at the close of the exhibition attend to their removal.

Rule X.—Judges will be selected with reference solely to the highest order of fitness, provided always that no person will be permitted to act as Judge in a department where he is a competitor.

Rule XI.—In no case can the Judges award special or discretionary premiums, but will recommend to the Executive Committee any articles in their class which they may deem worthy of special notice, and for which a premium has not been offered.

Rule XII.—The Judges on Animals will have regard to the symmetry, early maturing, thorough breeding, and characteristics of the breeds which they judge. They will make proper allowances for the age, feeding and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

Rule XIII.—No stock of inferior quality will be admitted within the grounds. A committee will be appointed to rule out all below a medium grade.

Rule XIV.—Animals, to which premiums have been awarded, must be paraded around the track, under the direction of the Marshal, that visitors may see the prize animals.

Rule XV.—No person will be allowed to interfere with the Judges during their adjudications.

Rule XVI.—The several Superintending Committees will give particular direction to all articles in their department, and see that all are arranged in the best order possible, to lessen and facilitate the labors of the Judges in their examinations.

Rule XVII.—The Superintendents will attend each set of Judges, in their respective departments, and point out the different articles or animals to be examined; will attach prize cards to the articles, or flags to the successful animals, after the reports of the Judges have been made up and delivered to the Chairman of the Executive Committee.

Rule XVIII.—The Judges will withhold pre ums n animals or articles which, in their opinion, are not worthy.

Rule XIX.—The Chief Marshal, with efficient aids, will be in attendance during the hours of exhibition, to keep proper order.

Rule XX.—Animals, when duly entered, will be well provided for by the Society, without charge to the owner, and cannot be removed except by permission of the Executive Committee.

Rule XXI.—All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignees, to or for whom only premiums of such articles will be awarded.

Rule XXII.—Every machine or implement offered for a premium must be so designated or described as to identify it to future purchasers, and also the selling price of the article must be stated and marked on the labels and in the published report of premium articles.

Rule XXIII.—Efficiency, cheapness and durability will be regarded as chief excellencies in every machine or implement.

Rule XXIV.—All articles under the head of Mining Implements must be accompanied by a full description of the same; and all specimens under the head of Minerals, or Mineral Products, must be accompanied by a statement showing where and when procured, together with such other information as will tend to aid the Judges in making judicious awards.

Rule XXV.—The Chief Marshal will call the Judges at 10 o'clock on Tuesday morning, assemble them at the Secretary's rooms, furnish them with blank books, in which to register their awards, and have the Judges conducted, by the Assistant Marshals, to their respective departments of the Exhibition.

Rule XXVI.—The Marshal and his Aids will give daily and constant attention to the several departments, and see that each of the above rules is strictly enforced.

Rule XXVII.—All *regular* premiums will be announced and delivered to their respective claimants, with appropriate exercises, before the close of the Fair.

Rule XXVIII.—A suitable person will be chosen in each department to superintend the carrying out of the arrangements of the Executive Committee.

Rule XXIX.—Parties to whom premiums in money have been awarded, shall have the choice to receive the same in money, silver plate, or diplomas.

[For the California Farmer.]

The Flour Monopoly.

EDITORS FARMER: I am not a monopolist of anything at present; and whatever blame may attach to me for former misdoings, I am not censurable in any way for having produced in the most remote degree, the present high price of flour. But at one time I was a flour merchant, and to a certain extent a monopolist, in the sense in which you and one of your fair correspondents appear to me to construe the term—having been a Corn-Factor of Mark Lane, in the city of London, for about two years. By the charter of the company the number of the factors is limited, and they enjoy the exclusive right of selling all grain and grain-stuffs brought to the public market of London. The merchants who are so employed form a very respectable body of men; and no one can be admitted to that position who cannot produce satisfactory testimonials of different kinds.

On each of us, taken collectively, there were probably, so far depending for a regular supply of daily bread, as many individuals as are supplied by the whole obnoxious half dozen whom you feel so much disposed to drag into public notice—and many of us had well-carpeted rooms too, and sundry comforts and conveniences of different kinds. We had a monopoly, and no mistake. Let no one, therefore, set down the flour-merchants of San Francisco and Sacramento as being wicked above all others who have followed the same business in former times, or in other places.

To enable me to place the subject in a more philosophical manner before the public, allow me to walk out of the straight road for a little. I shall return to it soon, I assure you; and I trust that you will perceive the reason of my apparent deviation, from the useful testimony which I may thus be enabled to bring along with me.

In early days, the wise heads of the time used to puzzle themselves about how it happened that there was a perpetual ocean current running from the Atlantic into the Mediterranean. How happened it that the one sea was higher than the other? How happened it that with such a ceaseless flow in its favor the Mediterranean did not get filled up? Modern science solves the enigma in a few words: Wherever there is exposed to the sun a body of water, whether large or little, whether the great Atlantic ocean, or a mere bucketful, evaporation is constantly taking place; and if the supply is not continued from some source, the water in time must get dried up. The plan which nature takes to prevent her seas and oceans from getting evaporated to nothing, is to bring down again, in the shape of rain and snow, the misty exhalations which have been temporarily carried away. The quantities of rain (and snow) in different places are not equal; and consequently, where two seas are connected by a narrow channel, it follows, almost to a certainty, that there must be a steady current, at certain seasons at least, from the one to the other. The fact is apparent. It is equally apparent that if the channel between them had not been narrow, no such effect could have been produced; the flow from one portion of the ocean to another being so gradual as to be scarcely perceptible.

The evil about which you make such a loud complaint, the offence of which you accuse the poor flour-merchants, appears to be, that where there was no natural narrow channel they have contrived to make one, by means of which they have been enabled to set their own mills a-going at the public expense.

They must be acute fellows to be able to do so. But grant that they could; the cause of the evil is evidently deeper. Let us apply the case of the two seas thus connected. We, in California, resemble the comparatively small Mediterranean; the old States beyond the mountains, taken collectively, the great Atlantic Ocean. When we have a scanty crop here, we have to be supplied from the other side; when we have more than we want, to send the surplus there, or to those places which they or somebody else would otherwise supply. If those States lay right alongside of us, the price of flour here (or of any other article of trade), would approximate the price there to a mere fraction. But such is not the case. Before we can get supplies to eke out any deficiency, a period of three or four months may be supposed to elapse. To the width of the interval between us is to be attributed the real cause of such inconveniences as result from a short supply.

That merchants, whose business is to make money by purchasing articles at as low a price as they can, and selling them for as much as they can get, should trade in flour as well as in other articles, is not be wondered at. But the charge against them on the present occasion is, that they are the direct cause of an extravagant price which would not have existed, if they had not conspired together to rob the public. I have not been at the trouble to investigate the charge, nor do I intend to do it. It is probably more an idle clamor than anything else. Suppose those merchants had not made any purchases of flour at the time they did, and that the price had been as much higher in Australia as would have justified its shipment thither—would the magnified sufferings of the helpless have been less to-day than they are, or rather than they were two months ago? Might not a real scarcity, with much higher prices, have prevailed? Does it not occur to the cool and dispassionate reader, that we may owe in some measure the blessing of having enough and to spare to the detested monopolists? I do not mean to advocate the cause of oppression, or monopoly of any kind by which the good of the many is sacrificed to promote the interests of a few. But I think an evil like that complained of soon works its own cure. Such is my experience; and I do not see that it can be otherwise. If those men have made unusual profits from their transactions in flour, other merchants will be induced to turn their eyes in the same direction. At certain seasons, when flour would otherwise be below par, an ordinary price would thus be obtainable by the grain-grower for his raw commodities, and the miller for the manufactured article. Others, awake to what had happened on a previous occasion, and aware of the disposition of the holders of any article of which there is a short supply, will be careful to have accessions to their stock on hand, brought in future at an earlier date to our market from other places; not from any particular virtue on their part, but on account of the certain profit which they could so easily procure. Prudent families, also, will be careful to lay in a little stock when the market is naturally low, and keep up the supply by making additions when they can do so at a reasonable rate; so as to put it out of the power of any monopolist, or confederacy of monopolists, to take them at a disadvantage; just as the governors of forts and garrisons do, to prevent their being starved into terms by an insidious enemy.

The public remedy against such evils evidently lies in shortening the distance between us and the other States. If we had a Railway and a Telegraph across the mountains which intervene between us, we would not suffer from such casual evils as we do. Instead of the commercial distance from here and back being three or four months, it would be reduced to as many weeks. The price of commodities here and there would be brought to a comparative level; and the just complaints of intelligent citizens, and the clamor of the crowd, be removed and obviated. AGRICOLA.

MILLERTON, May 18th, 1858.

Crops in Shasta.

FROM the letter of a correspondent, dated Horsetown, Shasta county, May 5, we make the following extract:

As regards the grain and hay crops in this section, I am afraid they will be very short. We have had no rain here for about six weeks, to do any good; it is now, and has been one of the dryest winters and springs that I have ever known in the country, and I have been here since the year 1849. Late planted crops of grain will hardly pay for harvesting; but early sown crops, where the ground was broken up in the spring, and lay fallow, will turn out very well. I have come to the conclusion that it is the best and most profitable time to plow for grain here in the spring, especially on high and dry land. I am mostly engaged this season in raising vegetables, which pay me much better than raising grain.

I hope to write to you again, soon, giving an account of the crops, etc. Yours, D. H.

The above note shows most conclusively the importance of the *summer fallow* system; by this means Grain can be sowed early, and thus conform to nature.

FRUIT BASKETS FOR ORCHARDISTS.—As the season of fruits has arrived, our fruit-growers should take pains to have their various fruits brought to market in the very best order. To this end the manner in which the fruit is packed is very essential. Where baskets are wanted, we invite their attention to the new basket warehouse just opened on Battery street, opposite Sather & Church's bank, where can be found the finest assortment of fruit baskets in the country; baskets for peaches, strawberries, cherries, etc., together with every variety of baskets known. We can assure our readers they will find in Mr. Thurnauer, the proprietor, a gentleman who will not only take pleasure in showing them his extensive stock now opening, but he will deal with them in the most liberal and honorable manner.

MOUNTAIN SEEDLING GOOSEBERRY.

This is a new variety, which originated in New Lebanon, N. Y. The New England Farmer speaks of it thus: "Fruit of medium size, roundish oval, red; flesh fine, tender, and when fully ripe, sweet, and fully equal to the best. Skin not as thick as many of the English sorts. Great grower and bearer; fruit on long stems, on drooping branches; few thorns; fruit very easily gathered. Perfectly hardy in bush and fruit, as it never mildews. One of the very best, if not the best, for general cultivation, as it is free from all the objections brought against the English sorts in regard to mildew, while it is much larger than the Houghton's seedling, a well known and fine American sort." We hope this variety of fruit will be introduced here, as by all experience this is a great country for the gooseberry.

Letter from Michigan.

WE are always glad to hear from the great States of our Union, and to present to our readers the contrast between the condition and prospects of those East and of our own. The letter of our excellent friend shows that however great may be their crops, they have "hard times" to supply the *needful*, and their attention is continually turned to this land of promise.

It would be well for our grain-growers to notice the promised harvest East, and the low price that now rules, and must rule for grain and flour in the Old States; and that if California growers hold for too high prices, this year, they will bring the Eastern crops here. We shall have to feel the effects of *their* great crops, in the ruling price of breadstuffs here and the world over. But, if we are wise, we can do well here. We hope that the advice of our correspondent will be noticed. He says:

"I know of no other way to procure the *little* we want of the needful to meet our obligations, than to plant a *large crop* this spring, give it a *thorough culture* through the summer, and *sell it for what it will bring*."

That is the true doctrine: sell the crop for what it is worth, and raise the needful and pay off. The whole letter of our friend is full of interest.

TALLMADGE, MICH., April 11th, 1858.

EDITORS FARMER: Another month is gone; spring has come with merry little birds; and the early flowers are opening their tiny little eyes, to catch the smiling sunbeams and April showers. Spring, how it charms me! It gives new life and vigor to soul and body. How *can* we be idle, when nature breaks forth with such resplendent scenes? The beautiful birds and flowers are entreating us to "be up and doing," before the blighting Winter of Time blossoms our heads for the grave. Yes; "be up and doing," do good to ourselves and those around us; teach the body to be *healthy*, and the mind to be *strong*, that we may *fully* enjoy the blessings which nature has strewn in the path of life.

Spring is much earlier with us, than usual. It commenced about the 14th of March, with a heavy rain, which continued nearly four days, the temperature being very high for the time of year, ranging from 40° to 65°. The frost left the ground in a hurry; and I think we could compete with any place or State for mud, it being deep as the ground had been frozen, and, in many places deeper. We have had warm and dry weather until within a few days it has rained some again; and, today, the wind blows cold, mercury standing four degrees above freezing point. The ground has been in good condition for the plow, and the farmers have fairly commenced their spring's work.

Wheat looks promising. I never saw it look better. Grass begins to grow finely; and, with favorable weather, stock will soon be grazing in the green fields. Fruit trees give us a fine show of swelling buds: and, if Jack Frost don't interfere, they will yield a luscious harvest. Sugar-making turned a short corner with not one-fourth as much made as last year. Money is very tight with us yet; and markets appear to be *duller* than ever, which I deem to be unnecessary. Those that are out debt and have enough to eat have little to fear. While those that have large demands against them have *small* prospects of paying: as it takes a *large* heap of produce to make a *small* pile of money, and *one hundred* cents only make a dollar at that. I know of no other way to procure the little we want of the needful to meet our obligations, than to plant a large crop this spring, and give it a thorough culture through summer, and sell it for what it will bring.

The religious revivals continue to spread and the influence is felt by many people, and covers a large territory. May the lessons given have a salutary effect, and many turn from the darkness of sin, to the light of knowledge and truth. Let us investigate *all* other truths *with* religion, sift out the tares of ignorance, and treasure up the gems of knowledge. Why remain ignorant? while the ways and means of storing up knowledge are so abundant? Build up the physical, moral, and mental man, far as possible. Enjoy life here, and lay up a treasure that will not be taken from us, when we exchange this for another state of existence. Respectfully,

O. N. CADWELL.

Reply to Agricola.

EDITORS FARMER: Your industrious correspondent Agricola, in your paper of the 31st ult., alludes to my article "upon the effects of trees" &c., in such a manner as to provoke a reply. In that communication, you will recollect, I endeavored to show, by the application of well known laws, that scattering trees contribute in no way to the moisture of the soil; that their presence deducted from the yield of the farmer's crops, &c. You able contributor, shocked at this apparent "heartless" conclusion, commences an enthusiastic defence of trees, as though we had began a war for their indiscriminate destruction. The poetical tone of that, with other of his late communications, inclines us to the belief that he might lately have dined on oat-meal porridge with the muses, and been blessed with a little of their inspiration. Nevertheless, the patronizing review of our article by Agricola must be received with grateful emotions, and the paternal manner in which he says: "Yet he has spoken the truth. I do not think he has said anything which is not correct," is so flattering a commendation, that we should be willing to congratulate ourself. But after having thus subscribed to the truth of our ideas on the matter, he, with ridiculous inconsistency, by means of a quotation from Hovey's Magazine, denies the whole gist of our article. Liebig has said:

"In order to give validity to a theoretic view, it is indispensible that its truth be guaranteed by a series of practical illustrations, on the part of the writer. If this be wanting, the theory should meet with but little or no attention."

When Agricola asserts that trees moisten the soil, and introduces a writer from Hovey's Magazine to corroborate the statement, we have the presumption to deny the bare assertions of the two high authorities; although, acting by the advice of Liebig, we should remain silent in the matter.

If, as the writer in Hovey's Magazine says, "trees condense the vapor of the atmosphere and conduct it to the soil," would it not be a useful suggestion, that they be cultivated in this dry climate, that moisture may be obtained by the "drippings." But this is a proposition which Agricola, or others who believe the statement, should be allowed to originate. Agricola says, in alluding to our article, "He tells us, &c., &c., which we knew before." We should have been surprised indeed to have communicated anything which your learned contributor did not know before, and we are of course not astonished at his remark; but we regret that he had not before chosen to instruct us in the matter. W. S.

ON THE CALAVERAS, May 17, 1858.

We give our columns to W. S. for the above, not for the purpose of mere discussion, but with the confidence that such a reply will come from our valued correspondent Agricola as is worthy of him, and that all future communications upon the subject will serve to elicit truth.

PATENT OFFICE REPORTS.—We desire to mention to those who have written to us for Patent Office Reports and not received them, that we sent them out as long as they lasted, and as soon as we receive more we will fill all orders not supplied.

Preparation for the Fair.

The annexed communication respecting the preparation for the Fair, we received from one who is fully conversant with what is going on in and around Marysville; and, as we have been there, we can indorse his statements as to the very general interest felt for every thing that appertains to the next State Fair.:

EDITORS FARMER: As the materials and machinery are being put in motion preparatory for the next great State Fair to be held at Marysville, one becomes interested in watching the progress of things and the prospects ahead. Although I felt but little interest in the matter prior to the last Fair, and did not enter fully into the spirit of the work of the present Fair to come, until of late, when, seeing the real labor performed almost daily of the Board of Directors preparatory to the coming event, in August, and the very great interest felt by the community not only in the city here, but throughout the surrounding country, it kindles a fire in the cause even with those not immediately interested, as the burning log heats and sets on fire those in its immediate proximity.

One hardly knows his own neighbors or their resources, until circumstances bring them out. By various means we become acquainted with Mr. Jones, Mr. Smith, Mr. Rogers, &c. &c., gentlemen living in the country, and that has been all we have known of them, perhaps, until the agitation of the subject of the State Fair. Well, we now begin to find out these persons one after another. There is not a day passes that we are not asked to go to some stable or cattle yard, and take a look at a fine yearling colt, a two-year old, or a three-year old, or a fine young Derham, or other choice breed young bull or heifer, colts two-year old, which cannot be purchased for $700, $800 or $1,000. We also come daily in contact with persons who know of very choice stock on this farm and that farm, all of which is to be showed up at the next Fair. One man, in the American Valley, 80 miles north of us, offers to bet largely, he will take the first premium on his three-year old bull; another, at Shasta, will bet largely, he will take the first premium on two and three-year old stallions; and one, in the immediate vicinity of the city, that he has the finest Durham cow in the State; another, that he will exhibit the greatest increase from one cow, in six years, ever heard of; and the figures on the amount of grain to the acre is almost incredible. Melons, squashes, &c., are expected to be sold by the yard instead of by the pound. It is not very improbable, that, as it is cheaper to raise these mammoth melons and squashes than to haul lumber from the mountains, that they will be let out for sleeping apartments. By the by, speaking of sleeping arrangements, there seems to be a very commendable spirit among the people here, in the matter of arrangements for the accomodation of the mass which will pour into the city, and a great mass there will be. Probably the gathering will far exceed any yet witnessed in the State; and, if the expectations are at all realized, of which there can be little or no doubt, the exhibition of this year will far exceed that of any previous one. And the elements are in the Valley of the Sacramento, and mountain valleys about us; and we shall hope to see large additions from the more southern sections, to help swell the monster; and show to the Eastern world what annual strides we are taking in this once supposed barren State. We say, God speed the Committee, the Society, and the cause generally, for it is the basis of all the superstructions of the world. G. L.

The Miners at the State Fair.

A very great interest is being made manifest among the Miners of all the upper Northern sections of the State, in the coming State Fair. It will be noticed that quite a number of premiums are offered for machinery and tools for working the mines, and for all departments of mining; this has created quite a furor among the miners, and we have been informed by several persons that almost the entire mass of the miners are preparing to come down to Marysville and spend one or two weeks, and have a good time.

The miners are a hard working and most industrious class of men, and as August is a season they can best be spared, the water being scarce, they have become interested in this Fair, and are coming *en masse*, and they intend to bring all their choice specimens. They will bring their gems—the rich-veined quartz—their scale gold, their fine dust, and their big lumps.

We hope some of our successful miners will take pains to make a collection of the different kinds of gold dust, coarse and fine, and arrange them in small vials, as they would make a handsome display. We should have a grand show of the product of the mines at this Fair, as Marysville is so near the rich diggings; and we know our mining friends only need be reminded of this to take right hold of the work and make it successful.

LIVE STOCK.—Cattle from Oregon, in great numbers, are being driven to the lower country.

Shall we Use Horses or Oxen?

The question is often asked, which of the two, horses or oxen, is most profitable for farm work? We do not propose attempting to settle the point, but simply to state some of the pros and cons, leaving our readers to strike the balance.

The advocates of oxen say that the first cost of a yoke of oxen is not more than half that of a span of good working horses. And then, the wagons, harness and other rigging necessary for horses is twice as expensive as the outfit needful for oxen. The expense of keeping oxen is much less than of horses; less by one-third, say some. One can hardly enumerate the accidents to which horses are subject; the diseases which which prey upon them are about as numerous as those which afflict the human family, and have to be continually provided against and treated with medicine. If they are young or spirited, none but a trusty teamster can manage them. The owner must be constantly on the watch, or they will be taxed beyond their strength or driven beyond their natural speed. And then the wear and tear of harness, wagons, shoes and other rigging, is considerably greater with horses than with oxen. As to the work done by oxen, there is hardly anything which they cannot do as well as horses; and some kinds they will do better. Heavy work, such as hauling out manure, logs and rocks, and plowing stony lands, and breaking up stiff fallows, all work which requires a strong and steady pull, they do better than horses. Some persons complain of their slowness in work, and their lack of endurance; but it is claimed that such farmers stint their cattle in good fodder, and in other respects treat them with neglect. Give them warm, clean and well aired stables, and plenty of generous feed, so as to keep them in good flesh, and it is believed that they will do as much work, annually, as horses.

In this enumeration, it should not be forgotten that the manure of oxen is more valuable than horse dung; that oxen increase, in value until they are twelve years old, and after that may be fattened for the butcher. When horses are twelve years old, they depreciate in value rapidly, and soon become a burden.

The advocates of the horse claim, on the the other hand, that while the first cost of an ox-team is considerably less, the expense of keeping is about the same, if both are well fed; and, that the horse will do more work, and on the whole, more satisfactorily, than oxen. A good pair of working oxen will weigh 3,000 pounds, and a good span of working horses, 2,000 pounds; is it, then, reasonable to suppose that it will cost any more to support the 2,000 pounds of flesh than the 3,000?

As to drawing heavy loads, there are, indeed, cases in which ox-strength is the most serviceable; but ordinarily, a span of heavy, well-trained horses will do everything required on a farm. It is generally conceded that in very warm weather, the horse has greatest power of endurance. A yoke of oxen cannot be divided in working, but a span of horses can. One can work, while the other is resting; one can be rode or driven away on errands, while the other is plowing out the corn; or two teams can be made of one span, for raking hay, etc. It cannot be denied that horses will plow a field quicker than oxen. It is also proved by experience that a yoke of oxen cannot be worked hard and fed high for more than two years in succession. The third summer, they will lose their appetite and strength, and must be turned out to pasture.

Every farmer, too, wishes often to ride with his family to town, to church on the Sabbath, and throughout all the neighborhood on business or pleasure; but Buck and Bright would hardly answer his purpose. A good span of horses is one of the greatest delights of the farmer's son's; without this source of enjoyment there would be far fewer attractions in a life of agriculture than there are at present.—[Am. Ag.

Pot and Medicinal Herbs.

Every garden should be stocked with pot and medicinal herbs. We look upon the pot herbs, says the Cotton Planter, as medicinal. Who can doubt that sage, thyme, savory, marjoram and parsley, are medicinals, when combined with our oily meats. They are, certainly palatable, and make many dishes relish that would be insipid without them. And then the various truly medicinal herbs that will flourish, but for the culture, sage, mint, bene, catnip, tansy, rue balm, boneset, and a hundred others that are potent in disease, that all the minerals which should abound in the smallest gardens.

Most of these are easily raised from seed, some are perennial, and may be propagated by dividing their roots. Many of these are so tenacious of life, that they will flourish in the waste places of the garden, where an edible plant will not grow. The annual plants should be gathered just before they flower, as they are then in their fullest flavor. The leaves of marjoram, savory, thyme, mint, tarvagon, sage, chervil, burnet, parsley, fennel, bene, plant and the flowers of the elder should be plucked in clear dry weather, dried in the shade, rubbed and pulverized through the hands and packed in clean bottles for future use. If the bottles are corked tight, the flavor of the herb will be preserved as fresh and genuine as when just plucked.

The Plan of a Corn Crib.

A writer in the Cotton Planter gives an account of a corn crib, which he saw some years ago, in Virginia, and which the owner assured him was *rat-proof*, and if he mistake not was built of logs, and as nearly as he can now recollect in the following manner: In the first place; sink as many blocks or pillars as you wish to rest the crib on deep enough in the ground to prevent danger of sinking or settling from the weight of the corn, have the tops of these blocks or pillars perfectly square and just even with the ground. On this foundation rest as many blocks, smoothly turned in the shape of a cone, the apex down and sawed off square, just broad enough to stand firmly on the supporting blocks or pillars; let these cones be at least two and a-half feet high, and take care to have all perfectly perpendicular. On these inverted cones build your crib. I would advise that these conical blocks be tinned, as it would not cost a great deal, and would afford additional security.

Pumpkin Pies Without Eggs.—As I have never seen the following recipe in print, says a correspondent of the Prairie Farmer, and thinking it may be of interest to some of your lady readers, I send it to you, and you may do as you see fit about publishing it:

Prepare the pumpkin in the same manner as when you used eggs; take a table-spoonful of flour to a pie—mix it with some milk—stir it in the prepared pumpkin, and when baked you will not be able to tell any difference in the pies made with eggs and those made with flour.

State Agricultural Society's Reports.

[CONCLUDED.]

PIANO FORTES.

The committee have performed the duties assigned them, as far as there was occasion. As there was but one piano on exhibition, they are not able to institute any comparison, and can only speak in general terms of the instrument entered.

The piano entered is a first-class instrument, of the style called "semi-grand." Its compass of the style called "semi-grand." Its compass is seven and three-quarters octaves. The bass strings are very heavy and long, and have a remarkably strong and rich tone. The upper strings run under those of the lower part of the scale, possessing two layers. This arrangement gives more room for the proper vibration of the strings, and for free movement of the action. The strain is thus also better distributed, and the liability to get out of tune diminished. This is the most modern construction of the scale, and is being adopted in all the best factories. The upper half of the scale is treble-stringed, and the tone is very full and brilliant. The iron frame is so braced in all directions as to give the greatest strength, and to be entirely above any liability to rupture. The case is of medium style, neither highly ornamented nor very plain. It presents an appearance in keeping with the character of the action and tone, being beyond criticism.

The committee would say, in conclusion, that this piano is fully equal to any that they have seen in the State, of foreign importation, and they believe, if there had been a dozen on exhibition, they would have been compelled to award the premium to this piano. It was exhibited by Mr. Zech, of San Francisco.

H. B. Underhill, Ch. Committee.

BILLIARD TABLES.

We, the undersigned committee, appointed to report on billiard tables, respectfully beg leave to report as follows:

We find that Martin Bach, of San Francisco, has entered the only billiard table on exhibition. This table was designed by Mr. Bach, and made with his own hands, from native wood, in San Francisco. After examining this beautiful piece of home industry, the standing portion of which is on an entire new principle, having only five legs, one at each corner, and one in the center, for the purpose of regulating it, we agree in recommending the award of the premium offered, to Mr. Bach, notwithstanding the fact that he has no competitor, deeming the work and finish highly meritorious. The cushions on this table are the celebrated patent cushions invented by Michael Phelan, of New York.

J. C. Reid, Chairman Committee.

GRANITE WORK.

Your committee, to whom was referred the duty of examining granite work, beg leave to report, that we regret that there is but one exhibitor in this department; yet this material exists in abundance in many parts of the State, so much so, that whenever granite is required, it is always supplied from our own native quarries.

The specimens before us are from the California Granite Company, on the American river, near Folsom, Sacramento county. There are three samples offered, all of which are plain wrought, without ornaments or moldings; but nevertheless, the fine and even surface cut upon them shows that the stone compares favorably with the celebrated Quincy granite, and, in our opinion, is in all respects suitable for any purpose for which the Quincy granite can be used.

The specimens are for building purposes, and are as follows: one window lintel, one plain piece of ashler, and one piece of rustic ashler; all of which are cut in workmanlike manner.

We therefore award them a diploma.

P. J. Devine, Ch. Committee.

DOMESTIC ROPE.

Your committee on rope have made their examination, and award the premium to No. 19, the only specimen on exhibition. The manufacturers deserve much credit for the superior quality of their manufacture. We cannot refrain from calling attention to this one fact, that the manufacturers have already checked almost the entire importation of this article, and are enabled to furnish it at a much less price than the imported rope can be sold for. The raw material can be furnished in our maket at as cheap a rate as in any of the eastern cities, thereby saving a heavy expense in freight, and giving to the laborer of our own State the profit.

The premium is awarded to No. 19, exhibited by Tubbs & Co., of San Francisco, it being a very fine article. J. C. Fall, Ch. Committee.

DOMESTIC POTTERY.

The undersigned have examined the different lots of pottery exhibited, and award the premium to lot No. 76. exhibited by Marcus Williams of San José. The samples consisted of several pieces of fancy pottery, designed for flower pots and pillar ornaments. The texture was fine, remarkably free from coarse particles, with a firmess of adhesion well adapted to the manufacture of the larger articles of pottery in general use. E. E. Kenny, Ch. Committee.

FURNITURE.

The undersigned committee, appointed to examine samples of furniture manufactured in this State, report that they have made an examination of one entire set of parlor and chamber furniture, consisting of two tete-a-tetes, two arm chairs, eight parlor chairs, two ottomans, one attache, one bedstead, one bureau, one washstand, one sommo, and one wardrobe. The furniture was all made in San Francisco, of rosewood obtained on the Pacific coast. The style is elegant and chaste, and the workmanship of the first order. These samples of furniture, in quality of materials, workmanship and style, will do ample credit to the resources of the State, as well as to the enterprise and mechanical skill of the manufacturers, Messrs. J. G. Clark & Co.

C. I. Hutchinson, Ch. Committee.

CURED MEATS, PRESERVES, ETC.

The committee would respectfully make the following report upon the articles assigned them for examination:

No. 82. Smoked hams; best fifty pounds would be entitled to twenty dollars, but, as only one ham is on exhibition, we recommend a framed diploma. The ham was very fine, well and properly cured, and demonstrates, conclusively, that meats can be put up and cured in our climate, and be equal to any in the world.

No. 7. One jar dried apples, very fine; diploma. One jar dried peaches, equal to any we ever saw; diploma.

No. 40. Two cases preserved peaches, in tin; diploma. No. 33. One dozen fresh peaches, in tin; diploma.

In closing our report, we regret that those interested in the two essential and leading articles of our State's wealth and commerce, should have neglected them, and trust it may never occur again. These articles enter largely into our consumption, and it has required an immense amount of capital to pay for their importation from abroad. The time has arrived when this, in a great measure can be avoided. It is a fact, beyond controversy, that beef and pork can be cured in the climate of California, and compare favorably with that of any other portion of the world. We urge this matter, particularly, upon the attention of the public at large.

B. W. Owens, V. M. Peyton, Committee.

The committee to examine Blacksmith work, respectfully submit the following report:

They decide that William Peaslee is entitled to the premium of ten dollars, for the best work, consisting of four mining picks. They also recommend a diploma to Mr. La Bresh, for a superior sample of picks. Also recommend a a diploma to G. Dahl, for a fine sample of breast chains. T. J. Keys, Ch. Committee.

The committee to whom was assigned the duty of examining and reporting on "best Cabinets of California Natural History," beg leave to report that we have examined two cabinets, and would recommend that the premium be awarded to that belonging to the California Society of Natural History.

W. M. Ryer, M. D., Ch. Committee.

Your committee on Windmills would here report in favor of No. 26, exhibited by Messrs. Hart & Derrick, of Stockton, as entitled to the first premium.

We would further recommend Dr. F. G. Johnson's Windmill, for all uses, where a windmill is required. C. Grattan, Ch. Committee.

The committee appointed to examine specimen of Hats, etc., would here report that they award the first premium for the manufacture of the best silk hats to Collins & Tiffany, San Francisco. Framed diploma and five dollars.

They award the first premium for the manufacture of the best caps to M. Harris, San Francisco. Framed diploma and five dollars.

For a very superior dress hat, the committee award a framed diploma to A. Lammot, of Sacramento. O. H. Boyd, Committee.

The undersigned committee, to examine Upholstery, would here report, that they have examined a specimen of hair matress, exhibited by Jacob Schreiber, and would recommend for the same, as the best hair matress, a diploma.

J. G. Jenkins, Committee.

The committee on Daguerreotypes, etc., who examined some beautiful specimens of art, award to R. H. Vance, of San Francisco, the first premium for the best samples of ambrotypes, photographs and daguerreotypes.

J. S. Lock, G. Ambrose, Committee.

The undersigned committee would here report that they have, with pleasure, made an examination of a sample of Artificial Flowers on exhibition, and consider them a very superior article. The samples were exhibited by Mrs. C. A. Mead; and we would recommend, for the same, a premium of five dollars.

C. W. Cook, S. Miller, Committee.

Suggestions to Young Men.—In the course of my travels, I have seen many a promising and fine young man gradually led to dissipation, gambling, and ruin, merely by the want of means to make a solitary evening pass pleasantly. I earnestly advise any youth who quits that abode of purity, peace and delight, his paternal home, to acquire a taste for reading and writing. At every place where he may reside long, let him study to make his apartments as attractive and comfortable as possible; for he will find a little extraordinary expense, so bestowed at the beginning, to be economy at the end; let him read the books in the language of the place in which he lives; and, above all, let him never retire without writing at least a page of original comments on what he has seen read and heard in the day. This habit will teach him to observe and discriminate; for a man ceases to read with a desultory and wandering mind, which is utter waste of time, when he knows that an account of all the information which he has gained must be written at night.—[Clayton's Sketches on Biography.

Personal Influence.—Blessed influence of one true loving human soul on another! Not calculable by algebra, nor deductable by logic, but mysterious, effectual, mighty as the hidden process by which the many seed is quickened, and bursts forth into tall stem and broad leaf, and glowing, tasseled flower. Ideas are often poor ghosts; our sun-filled eyes cannot discern them; they pass athwart us in thin vapor, and cannot make themselves felt. But sometimes they are made of flesh; they breathe upon us with warm breath, they touch us with soft responsive hands, they look at us with sad, sincere eyes, and speak to us in appealing tones; they are clothed in a living human soul, with all its conflicts, its faith, and its love. Then their presence is a power, then they shake us like a passion, and we are drawn after them with gentle compulsion, as flame is drawn to flame.—[Blackwood's Magazine.

The Biters Bit.—The over-speculation in the flour trade has brought on the usual reaction, and we are beginning to hear of failures, superinduced by the headlong recklessness with which so many entered into a compact that could have—as was evident to the shrewdest operators among them—only a very brief duration. But this is the history of all speculations. The few who originate them may possibly realize handsome profits, but the many who take up the chances at the last possible moment are invariably the sufferers. We sympathize with the losers, but at the same time, considering ourselves personally interested in the price of bread, we are very much rejoiced that the necessary article has been once more reduced to a price within the compass of ordinary pockets. Once give unbridled rein to speculation, and there is no telling where it may end. Potatoes and "punkins" will be elevated in the vegetable scale; roast beef will be sold at so many dollars the pennyweight, and cabbage and cauliflowers will be within the reach of millionaires only.

The above "hit" at speculation, we clip from the Golden Era.

Rust on Gun Barrels.—The following recipe is valuable for preventing rust on gun barrels: Three ounces of black lead with half a pound of hogs-lard, a quarter of an ounce of camphor, boiled on a slow fire; the gun barrel to be rubbed with this, and after thirty-six hours, rubbed off with a linen cloth. Twice in the winter will be sufficient. After washing, a little neat's-foot oil, occasionally applied with a hare's foot, is useful.

Miscellany.

HOPE.

[From the German of Schiller.]

BY ELLA FARMAN.

How much the man doth speak and dream
About the coming Better Times;
Toward a goal that golden seems
He looks, he hastens, and he climbs.
The world grows old and groweth young again,
But still he hopes a Better Time will reign.

Hope leads him all his life, forsooth;
She flatters round the gleeful boy;
Her magic light allures the youth;
With Age she will not buried be.
If in the grave man ends his weary race,
Hope doth remove him from that resting-place.

She is no wheedling, vain Conceit,
Begot in brains of fools forlorn;
Within the heart she loudly cries,
To something better we are born.
And that which inner voices do foretell,
Doth not deceive the soul that trusts so well.

Farmers' Daughters.

BY JEREMY LOUD.

God bless them! is our most natural exclamation. The fresh, rosy, fair complexioned creatures, wearing their souls in their eyes and their hearts in their hands, robust and bouncing, vigorous and hearty, full of activity, and life, and health, and real beauty. You can stop to call them "coarse," and all that, but the charge is more than half conventional. There is *one* thing about them we like: they are simple, and timid, and natural. Better a thousand times for the hopes of the world that the mothers of unborn generations be too awkward than too infirm, affected, sentimental and dawdling. The boys and girls who have not yet opened their bright eyes to the day, will live to thank the country girl for their blessed inheritance of physical health and activity. The giant projects of the coming years will owe their final success to the stout constitutions and the high spirits that the maidens of our day are capable of handing down to them at their birth.

You can find them back from the towns and cities now; a mile away from one another; on great farms, supervising the dairy, the poultry, or the kitchen department; girls not exactly put out to a term of hard service, nor yet *kept in* for a similar purpose; but quietly and happily attending to domestic duties in a domestic way; contented, because contentment brings bliss; trustful with their affections; inclined to look at the bright side of things, full of singing from morning to night; with red cheeks both in summer and in winter; attracted with a feeling of devotion to home and all its endearing associations; and just the brightest beauties, all considered, that illuminate the pathway of parents and the neighborhood. Such are our farmers' daughters, the best specimens of them. They are not all after this picture; but then, the exceptions are few. Those that we have studied, as you can find them all along through our Northern States, and in New England especially, are the models of their sex. To be sure, they are a trifle too timid; they may not yet feel exactly at their ease in all sorts of society; nor may they be fully aware of the decided beauty—for nature alone offers the enviable endowment—that breathes from their forms, their faces and their free graces, but still, as this city is driven to make regular drafts on the country for its men, just so is it obliged, and always will be obliged, to go to the same green fields and grassy lanes, and old brown houses, for its women and mothers for the coming generations. We are heartily glad, too, it is so.

A farmer's girl in these times is not what she ought to be by any means. Once they were tied down to paring and coring apples, to spinning wool and flax, to doing general scullery labor, and to various avocations that we now consider a trifle beneath the province of our women—that is, for a regular occupation. Now the spinning is not done in the farmer's kitchen, the apples are pared and cored by machinery, the hard work is performed by the "woman," and a general spirit of refinement is slowly working its way in. One can readily detect it in the changed looks of our door-yards. It confesses itself in the beautiful parterres of flowers that are tended with so much care during the summer season. It appears in the disposition to read more, to be less timid and shy, to establish something like a truly social state and neighborhood, and to court those graces that always and everywhere imply a hightened culture on the part of those who give them their attention and thought.

And just in this place, it is impossible to keep out of mind the influence which one graceful, beautiful and pure-minded woman exerts in a house in the country. A home without her presence would be no home. Desert land could not be more barren. She throws around the dwelling all the charms that belong to her individual character. From her person itself radiates an atmosphere that seems to make all things of heaven. By her look, by her smile alone, she is able to light up any spot and diffuse cheerfulness where man by himself would be a melancholy hermit. Where she lives, roses blow in the early summer and grass rambles up to the very door. The buttercups and dandelions inframe her dwelling with gold, as if the world around her were a mine of wealth. Children's feet patter wherever she goes, and little merry voices you can hear on every side. Life accompanies her. Beauty walks in her path. Happiness hovers in her presence—and there is hope, and rest, and peace only where she is.

A good farmer of to-day is ambitious to give his daughters all the advantages he can; so he consults friends and the passing catalogues, and resolves on sending them to as good schools as are to be had. But they, every one of them, know how to bake bread before they go. That's a consolation. And the moment they are through with their schooling, and have taken a little time to recruit their strength by a reasonable respite on the old homestead, they are competent to take charge of the household to which they are generally called.

But not all have the luck, good or bad, to go away to school. They learn what they can near home, and perhaps set up as teachers of the District School, during the summer months, under the auspices of the School Committee. They go through the old sing-song routine of teaching the children how to read and spell, perhaps the girls how to execute plain sowing, and then fall back on their reserved rights as assistants in their respective households. Sometimes they are indispensable at home, in which case they are held fast by the button of affection, and sundry other inducements of their parents. They are soon installed mistresses of their own homes, and occupy the position in spite even of the most determined and persevering efforts of lovers and admirers to entice them away. We know very many such, who have with a sacred devotion to father and mother, consented to forego all their hopes and ambition world-wise and consecrated their whole lives to the support of the hearts of their parents. But such instances are not to be found except for the looking.

But not all the farmers' girls get the advantages they so much deserve. Some of them stay at home in the quiet old brown houses, and look out over the green grass or white snow-drifts, longing eagerly to see that great world which something tells them lies beyond. They do their daily work in the kitchen; they wash, and iron, and sew, and help in the dairy; they make beds, wash floors, set things to rights, run to the windows whenever strangers pass on the road, and make up, more or less, the life and light of the household. When you take your summer excursion to the country, you will see them standing in the doors staring at you while you pass, feeding the poultry in the back yard, perhaps hanging out the washing on the line, with sprawling white hoods on out of doors, and always robust, rosy, bright and charming. Their faces speak only health, and their figures are generally the perfection of the female form.

Just let us call in at this nice old farm-house that is nestled here under the hill-side, and see how the old man's girls live—what they look like—what they busy themselves about—and chat a moment with them on matters in which their guiltless hearts feel the deepest interest.

There, for example, are three lively young creatures under the same roof. The farmer himself welcomes you warmly, and then with a knowing nod tells you that the woman on the other side of the table, with a long checked apron on, is his wife. And a farmer's wife is somebody that no home in the country knows how to do without. Then in come, first Jane, next Lucy, and lastly Betsey. They adhere to the plain old names, see. The girls drop a very timid courtesy, fall to fussing over their wristbands or collars, and run about the room in quest of something to do that shall make the visitor more comfortable, even when he is well enough already.

You sit in the chimney corner, if it is winter, and wait till the girls get supper. In that interval you have a grand opportunity for seeing how the domestic arrangements are conducted. You can observe the nice and exact family discipline, study the ways of the household generally and find out for yourself what farmers' daughters are. Jane "draws" the tea—Lucy finds the mince-pies, cuts the bread, keeps the cat out of mischief, and keeps a corner of her eye to the guest—while Betsey takes care of the children, sees that the bread doesn't toast too brown before the fire, runs hither and yon in response to the calls of her mother, and keeps an eye on the stranger likewise.

These three buxom girls form one of the prettiest household pictures. The Graces are nothing to them. Father sits back in his chair in the corner and regards them with pride and delight. Mother bustles about generally, stopping now and then to see if the stranger is a *young* man, and how he might do, in certain fanciful exigencies, for one of these ruddy girls of hers. But they all do their best to make a visitor comfortable, and some understand the simple little trick better than others do. Some fret and fuss enough about it to answer for the reception of the President; but here and there you will find those rare naturally beautiful souls in the country that always have a feast spread for chance guests, and receive them with all the native grace, and ease, and simplicity, of native queens and princesses. Why do not such inhabit the green spots of God's earth altogether, and not chiefly they who would desecrate, in too many instances, the sacred earth in which they claim proprietorship.

The farmers' girls are up betimes in the morning, with a window wide open and a bed early made. In the summer you will see them all about the house; sometimes in the barn-yard milking a favorite cow, or throwing corn to the hens and ducks, or stuffing dough down the throats of young chickens. They are gay creatures then—romping hoydens with rosy cheeks and arms bared to the sun and dew. One would fall in love with them at such a time in spite of himself. If cheese is to be made, they have a hand to dip into it; or if butter, then their white arms are kneading out the buttermilk as far up as their elbows. They know all there is worth knowing about housekeeping, from kindling a fire on a frosty morning to basting a goose and putting it upon the table as it should be. They are up to all the tricks of living. You need not go among them thinking to teach them how to make improved bread; and though it is true that they may not be familiar with the numerous arts of such a caterer as Soyer, yet they can set as many good, hearty, appetizing dishes before you as you can ask for from one year's end to another. Even when they pour the milk from the pitcher, as you set over against them at the table, it looks and sounds as it does not seem to anywhere else. It gurgles, and froths, and foams, and gushes, and your very lips water for a tumblerful before it is set down again; and forever after that you never think of fresh country milk and cream but you think at the same time of country maids, with their fair arms and blooming, healthy faces. The two things will go together of necessity.

The country girl generally finds her husband, however, at the singing-school. These long winters, with their sociable evenings, are what do the mischief. Then it is that Lucy gets a beau home pretty regularly, and her less fortunate sisters affect to laugh at her. And then, if the young fellow is inclined to make a serious matter of it at all, he commences a regular course of visits. And these visits vary, in length and frequency, from once in two weeks to oftener. In many localities that we might mention in the rural districts, they occur exactly once in two weeks, and then only on Sunday evenings. We have seen many and many a light burning on Sunday night, at an hour when none but those who were either traveling or courting ought to have been up. The best room in the farmer's house is open then, even if they insist on shutting out the sunshine all the rest of the week. One who took pains to pass slowly by might discover the shadow of a head, primly set up on a pair of shoulders, across the paper window-curtain, which he would know at a glance to belong to some likely farmer fellow not over a mile or two off. Besides, there is a horse standing shivering in the lee of the house, perhaps with a blanket stretched over him, his nose dropping down between his knees in drowsy meditation.

In time, courtship comes to marriage—and this is the great crowning event of all. The house is turned topsy-turvy for it—there is no end to the fuss and fun; and if the design is to make the affair just as secret as possible, it is remarkable how much pains are taken to make it just as public as possible. Any goose could guess in a minute that something was going on very like a wedding, which generally winds up the whole arrangement. And to go to a country wedding—let us tell you: a real honest, no make-believe country wedding, is to go where you will always wish you could have stayed a great deal longer.

The business is entered upon so heartily and with so much zest. All hands are in earnest—not more about the real ceremony than the frolics that make the time such a time as it is. There is actually more kissing done at those gatherings than during the rest of the year all put together. And many a timid pair naturally shy of making each other acquainted with their mutual feelings, spruce up their courage when they come to take a part in these festivals, and pop the all-important question right there upon the spot, before they stop to think what has hurt them.

Then the newly-married couple settle down for themselves. If they do not go "out west" the first year, the husband either settles on the old place under his father, or else buys or hires a farm himself, and enters upon this calling as naturally as a newly-hatched duckling takes to water. This beginning life as some of the farmers' girls begin it, is really poetic and refreshing—it has such a flavor of good sense in it, too. These are the girls that rear the MEN for us—the men who build our steamships and railways, who are to raise the character of their own calling, on whom our cities make regular drafts for the bone and sinew by whose power they are held together, and who carry in their hearts and hands the hopes of the coming ages.

Blessed are the men whose mothers were country girls. At least they inherit vigorous health, and in these days of decadence that is something. They have heard something in their youth, if they have not themselves seen it, about fresh country scenes, about the trees, and grass, and the dew, and the sunsets; and these things enter further into the nature than worldly people with poor souls are apt to suppose. If we were to marry ever again, "no money" would tempt us to hunt for any but a ruddy, fresh, free-hearted, buxom country beauty. And we know where such are to be had, too!

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS,

Daguerreotypes and Melainotypes.

VANCE & CO.,

Corner of Third and J streets,

(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,

9-3m Sacramento.

Read This! Read It!!

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN

AND

NURSERY,

On the American River, 3½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,

SHADE AND ORNAMENTAL TREES,

GREENHOUSE PLANTS,

SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE

SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE,

embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being

CORRECT AS TO NAMES AND VARIETIES,

are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

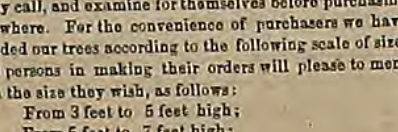
We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.



The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

v8-18-6m A. P. SMITH.

GRAIN SACKS AND SHIP CHANDLERY,

Thrashing, Mowing and Reaping MACHINES.

And every article usually kept for the Farmer's or Miner's use.

Corner Main and Hunter streets,

14 STOCKTON.

Austin's Patent Wooden Fan

WINDMILL.

THE undersigned has secured his PATENT for the

NEW WINDMILL

invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSTIN,

PATENTEE,

STOCKTON, Cal.

N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. [14] J. A. A.

MISCELLANEOUS.

WHEELER & WILSON

MANUFACTURING COMPANY'S

SEWING MACHINES.

343 Broadway, New York.

Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.

Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H. C. HAYDEN, AGENT,

157 Sacramento street

9v-7 3m (between Montgomery and Kearny)

JOHN D. ARTHUR,

IMPORTER AND JOBBER OF

Agricultural Implements,

Washington street, near Davis,

HAS just received, by late arrivals from the East, and will continue to receive, a large and varied assortment of AGRICULTURAL GOODS, among which are the following, which will be sold *at the Lowest Market Rates*:

Ox Yokes, assorted sizes (complete);
Ox Bows, best Vermont make, in cases of five dozen pair;
Grind stones, assorted sizes, a large assortment;
Ox Yokes, plain; ox bow-pins; ox chains;
Churns, thermometer and cylinder, assorted sizes;
Steel Garden Rakes, assorted sizes; Potato Hooks and Spades;
Steel Spades, Ames', square; long and short handle Shovels;
Hoes, Tuttle No 1, assorted sizes; California and Planters' Hoes;
Steel Grain and Coal Scoops; Hay Knives;
Crowbars; Sledges; Screw Wrenches; Brushes;
Hay Cutters, assorted sizes; Horse and Wool Cards;
Axes, Hunt's and Collins'; Store Trucks, assorted sizes;
Hay Forks, 2, 3, and 4-tine, Tuttle's and other kinds;
Barley Forks, large; Manure and straw Forks;
Hay Rakes; Barley Rakes, best quality;
Seed-sowers; Cultivators, with steel and cast iron teeth;
Horse Rakes, revolving and steel teeth;
Farm Wagons, light and heavy; Harness;
Carts and Cart Harness; hames; horse collars;
Canal Barows, best quality, in cases of twelve each;
Winches, for the Mines; Double-trees, three-horse do;
Plows, steel and cast iron, of all sizes and prices;
Plow Points, all kinds; Trace Chains; Post Augers;
Cheese Presses; Cheese Hoops; Well Buckets;
Grain Cradles (Grape-vine and Grant's), extra fingers;
Ax, Pick, Sledge, Fork and Rake Handles;
Corn Mills; Grain Mills; sickles; scythe stones;
Fanning mills, assorted sizes; extra knives; boxes;
Sections, &c, for Reapers; Extra Arms for Thrashers;
Reapers; Mowers; Thrashers; &c., &c.

The subscriber, having purchased and made arrangements for a full supply of Agricultural Implements, in New York and Boston (from whence he has but recently returned), he will be

IN CONSTANT RECEIPT OF

Fresh Goods well adapted to this Market,

By Clipper ships arriving during the season,

Which he can afford and *will sell on as favorable terms* as any other similar establishment on the Pacific coast. Farmers and Dealers will find it for their interest to call and see the subscriber, as his Agricultural warerooms.

JOHN D. ARTHUR,

7-3m 3 and 4 Washington street, near Davis.

A. L. EDWARDS & CO.,

NEW STOCK OF CHOICE

GROCERIES,

At 81 Clay street, above Front,

A. L. EDWARDS & CO. HAVE JUST OPENED a fine assortment of

Choice Family Groceries,

which they offer at the lowest rates:

FLOUR—Superior brands of domestic.
CORN-MEAL—Fresh, in 10, 25 and 50-lb sacks.
BUCKWHEAT-MEAL—Hominy, coarse and fine, Corn-starch.
COFFEE—Old Government and Green Java, and superior Rio.
TEAS—Superior fresh Green and Black, in 6, 12, and 30-lb boxes.
CANDLES—Chemical, Sperm, Wax, and best quality Adamantine.
SUGAR—Crushed, Powdered and Brown.
CHEESE—California and Durham Farm.
PICKLES—English and California Pickles, in pints and quarts.
PIE-FRUITS—English and American Pie-Fruits, in glass and tins.
OIL—China Nut-Oil, in tins and jars.
YEAST POWDERS—Preston & Merrill's, Hope Mills and California.
MUSTARD—California, English and French.
OYSTERS—The most desirable brands.
COCOA—Paste, Shells, and cracked Cocoa, Broma, Chocolate, &c.
STARCH—Glenfield Patent.
Mince Meat—in quarts and half-gallon jars.
Cream Tartar and Soda.
Preserves—all kinds Jams, Jellies, Sauces, &c., in glass and tin.

Our customers may rely upon every article sold by us.

The Prices, in every respect, Low.

Goods delivered free of charge to any part of the city.

A. L. EDWARDS & CO.,

10-3m No. 81 Clay street, above Front.

The California Farmer.

SAN FRANCISCO, FRIDAY, MAY 21, 1858.

Visiting Committee
OF
California State Agricultural Society.

THE VISITING COMMITTEE of the State Agricultural Society give notice that they intend to proceed on their Visiting Tour of the different portions of the State, for the purpose of examining Farms, Orchards, Nurseries, Vineyards, Gardens, Mining Operations, Quartz Mining and Machinery, and the various other Industrial operations of the State: That they will visit every section and locality that time and convenience will admit; and that as a matter of economy and saving to the Society they will hope to find all the facilities of passing from one farm to another offered them that is possible.

The Committee will endeavor to keep the public informed through the columns of the CALIFORNIA FARMER and the Marysville papers, of the routes to be taken in rotation, and the time of visiting the different localities.

About the 20th to 24th of this month, a portion of the Committee will leave Marysville *en route* northward—passing through the vicinity of San Juan, Forest City, Downieville, Monte Christo, and La Porte;

And will leave La Porte about 1st June, for Gibsonville, St. Louis, American Valley, Indian Valley; returning via Spanish Ranch, the Meadows, Buck's Ranch, Bidwell's Bar, and Oroville.

G. H. BEACH, Rec. Sec.

MARYSVILLE, May 7th, 1858. * 18

The Wool of California.

LOOK to the amount of wool sent East by the Ocean Telegraph. Five years since a bale now and then was shipped; now it is being quoted as one of the great staples; in a few years it will count by the *millions of pounds* annually. We spent an hour or two the present week in the wool-packing house of D. Haskell, Esq., on Davis street, and we confess we found a pleasure and a satisfaction in so doing; for in addition to the fact of seeing our own staples going East, instead of gold, we noticed the *manner* in which it was prepared.

Until Mr. Haskell opened his warehouse, or until the business assumed a systematic shape, under the care of a skillful wool-sorter and packer, the wool was shipped in various coarse, common bags as it came from the country; now, as in Europe and elsewhere, the various wools are assorted, making some ten or twelve grades, and then neatly and very properly packed in new bags and branded with the shipper's brand, so that their very appearance indicates that wool and wool-packing is now an established business in California.

Mr. Haskell's establishment may be looked upon as the great head quarters, where those who have wool, hides, &c., can always find a market at fair valuation for their products. We were much interested in the prompt manner in which Mr. McLennan handled wool and gave directions to the men in their several duties. Mr. McLennan has charge of Mr. Haskell's wool department, as a wool-sorter, he having been thoroughly educated to that business, and long engaged in it among the large wool establishments connected with the Lowell factories; and we think Mr. Haskell most fortunate and wise in securing the services of a person so admirably qualified for this important branch of business; for we cannot but feel that the *wool trade of California*, in future years, will become celebrated everywhere, and become second to no other place in the world.

We desire to do all we can to aid in the dissemination of information that will benefit *breeders* of sheep and wool-growers, and we would now ask of them to send us samples of their shearings of each of their kinds of wool, the weight of their fleeces, and all the facts of their flocks and crop of wool, and we will have their wool numbered, graded, and placed on cards and registered, so that by the coming State Fair we can show them the grade of their wool, how it can be improved in value, and the purposes to which each kind of wool is designed. We hope this request will be regarded, as it will greatly benefit wool-raisers and sheep-breeders.

The Late Rains.

THE weather for the last few days has indicated rain, and on Wednesday, Thursday, and to-day, we have regular showers alternately with sunshine. These showers must be very refreshing and beneficial to our gardens, and to all green vegetation. How far it will affect the grain crops, whether favorably or otherwise, remains to be seen. We would esteem it a great kindness if our friends would give us all the information they can relative to the effect of the rain upon grain, where these showers extend. We would be glad also to know its effect upon orchards, the peaches, also upon the strawberry grounds; its effect upon the fruit, and its ripening. These are essential points.

We ask them to observe the increased size of the berries, and the quantity by reason of these showers, as it will aid in future experiments. If our cultivators will spare a few moments to notice facts, and send them to us, we can do them good. Our opinion has always been that with every year in California as we increase the area of our cultivated land, as we plant orchards, build cities and villages, our climate will change, the atmosphere becomes more humid by reason of these results, and we shall enjoy seasonable showers of rain each month in the year.

FRUIT IN MARYSVILLE.—When in the city of Marysville, last week, we were surprised at the abundance of strawberries and cherries that were offered thus early, from the gardens of G. H. Beach, and Messrs. Briggs, and also from Oroville. The Strawberries were selling at 37½ cents per pound at wholesale, and 50 cents at retail. Segui, near the Post Office, is ready to furnish fresh fruit every day, at very low prices, and is most obliging to his customers.

Good Times Coming.

Convention of Agricultural Editors at the East.

THE annexed Circular was received by the last steamer, and we lay it before our readers, to show that the *right spirit is abroad*. We rejoice to see this manifestation of progress. Discussion is what is needed, and a gathering of those who stand at the helm of the Agricultural ship, a meeting of the many, a commingling and fraternizing one with the other, an exchange of thought and opinion in social union, must result in great good; and we shall look for the results with great anxiety.

We wish we could be there and sit at the feet of these Gamaliels of our cause; it would cheer us on. Would that we could but induce such a Convention upon the shores of the Pacific. We ask the members of this Convention to remember California, and be sure and send us a goodly delegation of their number to attend our "Great State Fair," in August. We should be most happy to welcome them, and show them our progress. We send them our best wishes and greetings, and offer them the following for their consideration:

Resolved, That we recommend to the members of all State and County Agricultural Societies throughout the Union, the great importance of having a series of meetings held during their Annual Fairs, for the purpose of an interchange of the practical knowledge acquired during the past year, and for the discussion of those important subjects that require immediate action, in order to advance the cause of Progressive Agriculture. —

[The following was first put in type for the May Agriculturist, but to save time a copy is sent in advance to the Editors of Agricultural Journals.]

We have recently conversed with several of our brethren of the Agricultural Press, all of whom concur in the opinion that very much good would result could the Editors of the several Agricultural journals meet together, and spend a week or so in a discussion of some of the more important questions connected with *Soil Culture*. There is at present a wide diversity of views upon the subject of Chemistry as applied to Agriculture; of the value and mode of applying several of the leading fertilizers before the community; of the comparative merits of prominent agricultural implements, books, etc. It is believed that these and other topics might well be canvassed by those to whom the community are looking for the most reliable information. Perhaps a majority of the news and political journals are now devoting more or less space to giving agricultural intelligence and instruction, and the Editors would gladly embrace an opportunity to consult with those who make a speciality of this topic.

We speak in behalf of, and at the request of several others, in proposing that during the present season, there be held at some convenient point a general Convention of all members of the press who are interested in the subjects of Agriculture and Horticulture.

Those we have conversed with, have indicated about the middle of June, as the most convenient season, on several accounts. At that time a number of those residing at the South will be visiting the North, and it is a season of general traveling. Our several readers will be then so much occupied that a little less attention to our reading columns will not be so much regarded as at other times.

We have, personally, no partiality for any particular time or place. New York city has been indicated as a central point, but we, for one, will gladly go to any place in the Union which will be the most convenient to the greatest number of those interested. If this city is selected, we will undertake to secure a suitable Hall for the Convention, without expense to those attending, and further to provide as far as possible, for the entertainment of the visitors, and we doubt not similar provisions would be made elsewhere.

It is proposed to bring this matter to a focus in the following manner: Let each editor of the agricultural or semi-agricultural press, in his next issue, express his views upon the proposition, and if favorable to it, name his preference for the time and place of holding such a Convention, and at the same time nominate several gentlemen to act as a committee of correspondence and to make arrangements for a first meeting.

At an informal meeting of gentlemen, accidentally brought together in this city recently, the following persons were named as such committee, the nomination to be subject to ratification or alteration, by the general expression of the Press.

Simon Brown, Ed. New-England Farmer.
Luther Tucker, Ed. Country Gentleman.
D. D. T. Moore, Ed. Rural New-Yorker.
Thomas Brown, Ed. Ohio Farmer.
Jas. C. Medill, Ed. Prairie Farmer.
H. P. Byram, Ed. Valley Farmer.
J. Jay Smith, Ed. Horticulturist.
Samuel Sands, Ed. American Farmer.
Frank G. Ruffin, Ed. Southern Planter.
Daniel Lee, Ed. Southern Cultivator.

If this arrangement appears to meet with general favor, these gentlemen will doubtless at once open a correspondence with each other.

To save time and correspondence, it is proposed that the above named gentlemen, and others, forward at the earliest convenience their views on the subject to the editor of the Agriculturist, New York, who will act as temporary secretary, and embody in a circular the substance of the letters and editorials received, and send an early copy to all interested.

ORANGE JUDD,
Office of American Agriculturist.
April 8, 1856. New York City.

THE LITTLE PILGRIM.—The May number of this invaluable paper comes to us full of beautiful teachings for the young. Edited so ably by Grace Greenwood, it is winning fame and friends everywhere. The cost is only *fifty cents* per year, and should be in every family. Subscriptions received at this office.

FIRE AND POWDER-PROOF SAFES.—Those who would preserve their books, accounts, and gold from the destructive flames and from thieves and robbers, can do so very easily by calling on Messrs. Egg, who manufacture safes of all sizes and of the very best kinds. It is interesting to visit their manufactory and see their ingenious locks, which defy both the lockpicker and the power of powder.

STOCKTON BUSINESS HOUSES.—Our farmers, merchants, and ranchers of the San Joaquin district will please look to the cards from their city in our columns.

The New Picket.

BENICIA, May 4, 1858.

COL. WARREN: You being *the* CALIFORNIA FARMER, have doubtless occasion to use a picket to fasten your horse to, in your perambulations about your estate, collecting the tithes due you; or perhaps you have grass fields that you wish your mares to graze upon, and also wish to cut for hay, and therefore do not wish it tramped all over, and therefore picket them until they have eaten a clear circle, then remove them to another sweep by the removal of the stake. Or mayhap you are making much butter and cheese, and tether your calves near the dairy that the cows may be taught to come home and give you a first chance at the milk. If you are in any or all of these occupations, you have doubtless felt the trouble it is to drive stakes in the ground and knock them out again whenever you changed the animal's grazing-ground. To obviate all this inconvenience, I send you one of my Screw Pickets, the utility and convenience of which you will see at a glance. The swivel to which you attach the rope turns freely round on the stake, so that the rope does not get wound up; and by lifting it on to its key, it becomes the lever to turn the screw into and out of the ground. Every person who has had one pronounces it to be just the handiest article ever invented. A patent has been applied for and is now pending. In the mean time I am introducing them to the public. Please accept and try the article. It will screw readily into any ground where the grass is such as you would desire to picket an animal.

In enumerating the different occupations where you would find it useful, I forgot to mention your vaquero department, where it is so convenient that I hope to see one as an attachment to every vaquero's outfit; as indispensable as the reata.

Very respectfully yours. OLIVER HYDE.

Well! the above letter, though a private one, has so much of *public good* in it that we give it entire. The description accompanying the very acceptable gift is so "O. K." that we present it to our readers, remarking that they can see the very Screw Picket at our office, and then they can judge so much better than we can of its value to them. We feel assured it is most excellent where the sod is strong to hold the screw. We will promise to purchase a dozen, if our friend will only show us where our estates are, and our flocks and dairy herds. Faith, we had forgotten we were so rich, but now we will mount our "Pet Kate" and visit our large ranch, count our thousands of flocks and herds, look into the dairy house, see to the packing of our butter and cheese, and order it to market, and then count our gains. But, as everything is so changeable in California, we fear our flocks will be like "Wash's" black cow, when we look for them they will not be "thar," for our correspondent will *Hyde* them from our view.

SHAW'S AGRICULTURAL WORKS.—We paid another visit to these famous works the past week, and were exceedingly gratified to find so many workmen engaged, a constant increase in numbers, and a still higher improvement and greater skill manifested by this indefatigable mechanic. Shaw is bound to win the goal, although he has to contend with a host of obstacles: all the varied kinds of imported machinery, and all the old stocks here; yet just go and look at the *home-made implements* of Shaw. We examined his mowers and reapers. *Improvement* is his watchword; and in the mowers and reapers he has given great working strength, beauty of form, ease in the running gear to the axle, and additional strength when it is attached to the wood-work. The wood-work is heavier and better, and more adapted to California use. Instead of the common sheet-iron for the aprons, fine Russian iron is used, making a more perfect implement.

We learned that of forty-five reapers sold the past year, two-thirds broke at the axle. This danger is now remedied. All the castings are made at these works, and the wook-works of all implements. Mr. Shaw is rapidly gaining fame for his excellent work, and we trust home-made work will take the preference everywhere. We invite our readers to visit this workshop as worthy their particular attention. Mr. Shaw deserves the highest commendation for his great enterprise. We shall speak further of this establishment hereafter.

FAVORS RECEIVED.—Our kind friend Mons. Prevost, of the Gardens at San José (where every lover of roses should go), made our office fragrant with the odor of roses, this week, by sending us a box of his choicest kinds. May he always prosper.

That box of strawberries from Wolf & Latham, from their famous grounds at Oakland, was enough to please the palate of any epicure. *Such* strawberries, would you like to see them of equal size and quality? just go to Whitman's Butter stand in the Washington market (Whitman is a famous man you know), and Mr. Wolf will show you the big ones; also go to his stand in the French market.

That new "horse-picket" was excellent—(see special letter)—and the giver has our thanks.

To Messrs. Broderick, Gwin, and McKibben, for valuable Congressional documents.

A manual, "The Garden Horticulture," we received from Messrs. Fowler & Wells, New York, shall be noticed in our next.

OUR MARYSVILLE PATRONS.—We invite the especial attention of our readers to the new advertisements of several heavy business houses there. We are happy to present so many cards of the large business men of that city, and we invite others. As our circulation is largely increasing there, and will be during the Fair, we can do them good.

OUR SACRAMENTO CARDS.—The Capital-city merchants also send us their patronage, and we can invite the great Sacramento district to the business cards in our columns.

A Monstrosity.

CAULIFLOWER* VERSUS MONGREL CABBAGE.

California is famous for vegetable *monstrosities*. In 1852 at the first State Fair of this State, a singular specimen was brought for exhibiton, and the exhibitor called it a *cauliflower;* all who are curious, if they will call at the office of the FARMER, we will *point out* that specimen. We preserved it by *hanging* it up to *dry*. It is of the *Flat*-head species, a hybrid; a cross of the cabbage, broccoli and cauliflower, and being an *unnatural* production, the *head* imperfect, and the *heart* gone. Being a monstrosity, the head *flattened* out, having nothing *inside*, it is really a curious *thing*, worth *looking* at, and it won't *hurt* anybody if it is *ugly!* We had never heard of a similar specimen since until to-day, when we learned a specimen of the same mongrel species was to be seen at the Bulletin office.

We hope to have time to see this *new* specimen before it *decays*, for we would like to examine it with a *microscope;* for if there was the *least* particle of *heart* in its formation, it would certainly make a good *head*. A *good* cauliflower is worth having, but a mongrel cabbage, a monstrosity of this sort, though *called cauliflower*, is only fit for *swine*.

* Cauliflower belongs to the *Brass*-ica tribe. Paxton says of this tribe: It is wonderful to observe the exceeding great difference in appearance and quality, particularly when we compare the *original* types as found on our shores, with the wavy sea-green *leaves tending to no head*, and flowering like *wild mustard*, or *charlock* with the *cauliflower* or *red* cabbage.

HIVE OF INDUSTRY—CHASE'S MILL.—We visited this great laboratory of human labor, skill, and industry, the past week. Chase's Mill is on Market street, and is one of those hives of industry that are building up our State. This is one of the largest saw-mills in our city, and about fifty men are employed in the different departments. Sawing and planing, tonguing and grooving, morticing and finishing, forms the first department. A cooper's shop is connected, where from the rough plank finished kegs and barrels are furnished for the dairy, for the sugar refinery, and for sirups, etc., of handsome finish and best quality. A door, blind and sash factory, with all the materials for the highest finished work. A box factory, where every kind of a box for every kind of manufactures on our coast. A turner's shop, where the best work upon bedsteads, etc., is *turned* out. A wheelbarrow manufactory, also, making even better ones than those imported. In this department we met an old '49 friend, Mr. Van Court, as industrious as ever, going ahead. We noticed in the sash factory, Mr. Metcalf; in the turners, Mr. Robb, and many others, all whose names we intend to procure as evidence of industrious men.

We found also a *bung* factory for making the *stoppers* to casks and barrels. We were wishing they would make a stopper for the gold that is carried away, but upon a little reflection we saw that this very place was one of the *stoppers* truly, for here was home industry; and our State is indebted to Messrs. B. T. Chase & Co., and all their workmen, for thus doing what they can to put a stopper upon the gold going abroad, and thus keeping it here.

CALIFORNIA PRODUCTS.—The clipper ship Ocean Telegraph, just loaded with the products of our growing State and cleared for New York, by Messrs. Moore & Folger, whose energy and enterprise in behalf of California products have already awakened a new interest, carries a cargo valued at about $150,000, consisting of the following articles, many of which until very recently remained worthless here, but now they represent so much gold, and save just so much from being sent from our shores. Surely our business men should notice these facts; it affects our State and their interests:

Quicksilver, 1000 flasks; barley, 3134 bags; tallow, 120 casks, 40 cases; horns, 19,500; rags, 127 bales; mustard seed, 49 bags; furs, 6 cases; type, 7 do; books, 4 do; hardware, 2 pkgs; mdse, 118 cases, 47 trunks, 8 boxes, 11 chests, 9 pkgs; hide cuttings, 12 bales; California wine, 1 keg, 5 cases; champagne, 100 cases; asphaltum, 1 cask; burnt canvas, 1 lot; old sails, 1 do; zinc in blocks, 1 do; scrap iron, 1 do; old iron, 40 tons; broken glass, 16 bbls; old copper, 10 casks, 6 cases, 2 bundles; composition, 2 casks; yellow metal, 17 casks, 5 bdls; rudder braces, 12; zinc, 72 plates, 3 casks, 13 bales; skins—seal, 1 bale, goat, 4 do, coon, 1 deer, 20 do, calf, 7 do, sheep, 89 do; not in bales, calfskins, 62, deerskins, 629, kipskins, 383; wool, 885 bales; hides, 18,287.

FLOUR AND GRAIN MARKET.—The gold fever has excited a lively trade in our city and many other places where miners can get supplies for the new Frazer diggings; the consequence is a lively demand for Flour, and all miners' goods, and this has caused those who are interested in Flour to secure a firmness with an increased demand, although there are large quantities of Flour nearing this port, and a new crop rapidly maturing. Flour will soon find its level, and had it not been for the unnatural rise, wheat would have been worth double what it will now bring at the opening of harvest the present year. Very little variation has taken place in our quotations the past week.

THE GREAT LEVIATHAN.—This mighty ocean palace, within whose walls more than ten thousand souls can congregate, and pass from continent to continent, will soon commence her first great mission. By the last news from Europe we learn that about 1800 workmen are now employed, that rapid progress is making, and that, in all probability, she will leave England the last of July.

We verily believe the news of *new* gold discoveries here may change her destination, and bring her to San Francisco. It would be a wise move in her owners. San Francisco should be the grand *port of entry* for this mighty moving city. We believe, too, this is her *destiny*, between Europe and San Francisco.

SHIPMENT of treasure, yesterday, by the steamer John L. Stephens, $1,879,672 32.

TO OUR READERS AND CORRESPONDENTS. We are most happy to present our readers this week a goodly amount of original matter, from our many able and prompt correspondents, who speak in their own language, thoughts that reflect goodness, truth and beauty.

We regret we are obliged to defer so much that we have received.

Two valuable communications from our esteemed correspondent N. B. H., "The Two Flowers," and "The Education of Woman," we gladly accept to appear.

The "Golden Guinea and the Marble Heart," a very beautiful sketch from Mary Glen, will appear next week.

We acknowledge with much pleasure the Sketch from our new correspondent F. A. C. Her contributions are valuable—will always be acceptable.

A Trip on the Steamer East, a medley, by Hydraulic, containing many jottings down, accepted.

The Frailty of Friendship in California, by Kathleen, received.

SEWING MACHINES.—As we travel over the State we notice almost everywhere that pretty piece of furniture, the sewing machines of Wheeler & Wilson's make. This pattern seems to be the favorite. H. C. Hayden's, on Sacramento street, San Francisco, is the head quarters. He has agencies over the State, and all we have known to be tried have given perfect satisfaction.

TO ADVERTISERS.—Persons wishing to make known their business widely are reminded that we are now sending out large editions of our journal and many extras beyond our own list, to make known the Premiums and other matters relating to the State Fair, and therefore we can scatter widely, notices of their inventions, implements &c.

Nature's Safety-Valves.

BEWARE OF IGNORANT ENGINEERS.—Infinite mischief has been done, is done daily, by a class of practitioners who may, with truth, be called medical tinkers. These gentlemen are content to patch up the diseased frame, instead of renovating the system. Their aim is to suppress rather than to eradicate. Professor Holloway belongs to a different school. His cures are not superficial and temporary, but complete and permanent. His theory of external disease is founded on reason and analogy. Abscesses, ulcers, and running sores, he looks upon as safety-valves, opened by nature, to permit the escape of morbid matter. To suppress the discharge, without removing the cause, he would consider about as rational as to tie down the valve of a steam-boiler while steam was rapidly generating within. As the careful engineer puts out the fire in the furnace, when he would stop the production of steam, so Holloway quenches the inflammatory principle which induces suppuration, before he attempts to close the orifice through which the discharge takes place. Hence the extraordinary cures of sore legs, open wounds, abscesses, sore breasts, and ulcers of all kinds, accomplished by his Ointment and Pills. These exterior afflictions are the indices of internal corruption, and the effect of the pills is to disinfect and purify the animal fluids in which that corruption exists. The poison carried by the blood vessels to the surface is met and neutralized by the Ointment, and thus the disease is quenched at its sources, and at the points where it is developed, at one and the same time. The result is, that no relapse occurs, for the poisonous elements being annihilated, there is nothing left, either in the recesses of the system, or in the outward integuments, which can rekindle inflammation. The disease is dead, past all resurrection. To film over a virulent ulcer, without destroying its cause, is to throw back inflammation upon the vital organs. The only name that can be given to such treatment is professional homicide. Holloway utterly ignores all SKIN-DEEP practice, the cures wrought by his remedies are thorough and fundamental.—(N. Y. Sunday Mercury.

HO FOR YOSEMITE.—The citizens of Coulterville, one of the great stopping places on the Yosemite route, are preparing for the visiting season. A flag-staff 175 feet high has just been erected by Cushman & Sullivan, upon which they have placed a pennant ninty feet long, and immediately below it a fine flag twenty-five by eight feet. Visitor should go by the way of Coulterville and back through Mariposa, or *vice versa*. We are collecting data for a descriptive route for our next issue. In about two to four weeks it will be fine traveling. We clip the following from the Mariposa Gazette, which tells about matters in that vicinity:

Mr. Mann arrived in town on Friday last from Yosemite Valley, whether he had been with some gentlemen from Sacramento. He states that the trail is in fine condition, and but little snow was encountered upon the route. The falls are very high—the snows are melting unusually early. Four grizzlies were encountered at the head of Alder Creek by Mr. Mann and party, but no serious consequences resulted therefrom. Grass is in abundance both upon the route and in the valley. A store is soon to be opened. A few Indians were in the valley. Trout fishing, excellent. Deer were seen and many grouse.

A new and large billiard saloon is about to be opened by Chamberlain & Co., on Main street.

Quartz of extraordinary richness is being taken from the Sanders vein, by McKenzie & Co.

Business of every description is good.

Many strangers from San Francisco and Sacramento are about town, examining into quartz matters, and many are *en route* for Yosemite Valley.

HOLLOWAY'S PILLS AND OINTMENT.—Myriads of men have been engaged, for more than one-quarter of this present century, in testing the efficaciousness of *Holloway's Pills and Ointment*, as remedies, either separately or conjointly, for all internal and external ailments. Their unanimous and enthusiastic verdict in favor of these remedies is now before us, and should convince the most incredulous.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

WILD CHERRY AND TAR, by an ingenious combination with a few other simples, afford us the surest antidote known for consumption of the lungs. Dr. Wistar, in his Balsam of Wild Cherry, has produced a remedy of untold value. None genuine unless signed I. Butts on the wrapper.

Auction and Commission.

O. H. PIERSON,
AUCTIONEER.

LEGALLY LICENSED
Real Estate Agent,
Office on D street, between 3d and 4th,
MARYSVILLE.

WM. THURNAUER,
Importer of French and German
FANCY BASKETS,
English and American Willow-ware,
Cane and Willow Chairs, Ladies' Work-stands,
TOYS, ETC.
No. 92 Battery street, between Commercial and Clay,
19 3m San Francisco.

THESE Seeds have been well known in the Atlantic States for nearly three quarters of a century, a period of time almost reaching back to the days of the Revolution. From a small beginning the business has been gradually enlarged, to meet the growing wants of the country, until it has become an immense establishment, exceeding, in extent, any similar concern in Europe.

The demand near home, and orders of old customers abroad, have absorbed all the Seeds which it has been in the power of the proprietors to produce, and they are not *now* prepared to offer them to the *Trade* on the Pacific. The present card is, therefore, simply to announce the fact of increased effort on the part of the proprietors to grow greater quantities than heretofore, and THEIR EXPECTED ABILITY TO FILL ALL ORDERS FOR SEEDS OF CROP 1858.

The undersigned will be happy to open correspondence on the subject with Seed Merchants in California, &c., and will forward a copy of their Rural Register, *free of charge*, to all persons, whether dealers in, or consumers of seed, who may send their address by mail or otherwise.

GREAT ATTRACTION!
..AT THE..
METROPOLITAN
Hair Cutting and Shaving Saloon,
ON D STREET,
Second door north of the Western House—MARYSVILLE.

THE UNDERSIGNED, wishing to regulate his charges in conformity with the times, has reduced the price of Hair Cutting and Shampooing, to 50 cents each; and would improve the present opportunity of returning his sincere thanks to his kind friends and patrons, for the very liberal patronage extended him, for the past three years and a half, and would solicit a continuance of the same. And to all those who are strangers to the
METROPOLITAN,
The undersigned would respectfully request them to give him a call, where they will find one of the most comfortable and airy Saloons in Northern California.

Gentlemen's Shirts, and Under Clothing, kept constantly on hand. Also, Depot for Duplex's justly celebrated Eau Lustrale Hair Restorative.

N. B.—Kraft's Patent Fans will be introduced in this establishment this month.
E. P. DUPLEX, Proprietor,
v9 19-3m Marysville.

☞ *This Beautiful Work has been published at great expense, and surpasses anything of the kind ever issued in Europe.*

For sale by HOVEY & CO.,
Orders received for the above work at the FARMER office, where copies can be seen. 9v-2 3m

SPECIAL NOTICES.

☞ **HOUSEKEEPER WANTED.**—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings too numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ **Wigs! Wigs!! Wigs!!!** — BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.
v8-13 1y 233 Broadway, New York.

☞ **A. W. FABER'S LEAD PENCILS.**—Lead Points, Propelling Pencils, Colored Pencils, White Crayons, Black Crayons, Slate Pencils, Red Chalk, etc.

These popular Pencils can be had of Stationers, Fancy Goods Dealers, and others in the various cities of California.

Extract of a letter from the eminent artist, Chevalier P. von Cornelius, Director of the Royal Academy in Berlin, 27th Oct., 1842: "It is scarcely necessary to say that I find Faber's Polygrades Lead Pencils in every respect most excellent. They are of all degrees of hardness and shade, and adapted as well for fine and firm outline as for finished drawing. The wood which incloses them has the necessary strength, but yields easily to the knife, and the lead never breaks away."

Extract from the Official Report of the Industrial Exhibition of the German Federal States, 1844, 3d Vol.: "Especially have the Pencils of Mr. A. W. Faber set at defiance all competition, and supplied every desideratum that the Artist can expect or desire in this particular."

Extract from the Report of the Great London Exhibition, 1851:

On referring to the Report, page 450, it will be seen that the Jurors have considered A. W. Faber's Pencils deserving of a more extended notice than has been accorded to any other Pencil Manufacturer. The Report further states as follows: "A. W. Faber's Pencils are of the best description, and the prices extremely low. They are exported throughout the whole civilized world, the demand being created by their good quality and cheapness."

Beware of Counterfeits!

The reputation of A. W. Faber's Lead Pencils has not ailed to attract the attention of certain individuals, who have either attempted an imitation of the same, or have undertaken the sale of a counterfeit article, which, though of a totally different manufacture and very inferior quality, are marked, some with the name of the genuine, some with the names, *W. A. Faber, A. W. Fabre, A. K. Faber, C. W. Faber*, etc., and are disposed of as genuine Faber's Polygrade Lead Pencils.

Every person will please to examine carefully the stamps on each Pencil—"A. W. FABER"—and observe that each dozen bears on the label a fac-simile of A. W. Faber's signature; and and further, that every genuine Pencil sold in the United States, has impressed in the wood itself, "E. FABER, 133 William street New York."
E. FABER, Sole Agent
v9-1 6m 133 William street, New York.

☞ **Oxygenated Bitters.**—
WORCESTER, June 27, 1854.

Gentlemen: After suffering much, for two years past, from Dyspepsia, I was induced to purchase of your Agent in Worcester, a bottle of your *Oxygenated Bitters*, and after a trial of less than two bottles, I find myself radically cured.

I have not the least hesitation in recommending them to all who are afflicted with this distressing complaint. You are at liberty to use this as you think best, to further the sale of this excellent medicine. Yours truly, JOHN GRAY.

Any individual suffering from weakness and derangement of the stomach, nervousness, or debility in any form, can be *cured* by this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 19-1m

☞ **COUNTERFEITS! COUNTERFEITS!**—HAVING been informed by our friends in some sections of the country, of the great injury done to their Hair, by the use of what purported to be the genuine **LYON'S KATHAIRON**, but proved to be **worthless counterfeits and imitations**; we caution the public against such imposition. Avoid all dealers who attempt to sell the spurious articles, for they are not to be depended upon in any matter. The great excellence and universal popularity of the **genuine LYON'S KATHAIRON** is attested by its immense sale—nearly 1,000,000 bottles per year; all pronounce it the most excellent preparation for the Hair ever made. Sold by all respectable dealers, everywhere, for 25 cents per bottle.
HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
19 1m *San Francisco, California.*

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**
Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

☞ **Farm Stock.**—Having completed our arrangements for the importation of choice stock, we are now prepared to receive orders for any of the following breeds and would call the attention of those in want, to our unsurpassed facilities for the importation and improvement of the choicest stock:

Thorough-bred Devon Cattle,		Webb Southdown Sheep.	
Shorthorns	do	Spanish	do do
Thorough-bred Ayrshire	do	Cotswold	do do
Suffolk and Essex Pigs.		Chester White Hogs.	

Fancy Fowls—all the best varieties.

All communications addressed to us will receive immediate attention and we shall be happy to correspond with any and all upon the subject. Address
WARREN & CO., Cal. Farmer Office.

☞ REGISTRY OF STOCK.—All who are interested in the purchase and sale of Stock, of every description, will find a Register kept at our Office, for the entry of all Stock for sale, and their full and correct pedigrees; so that persons who have Stock for sale, or wish to purchase, can gain important information. Those in want of choice Stock will find this opportunity a valuable one, as we are in correspondence with the principal Stock Breeders in the States, and are fully prepared at all times to make sales of Stock of any quality.

☞ **THORBURN'S Preliminary Wholesale** CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.
J. M. THORBURN & CO.,
19-tf 15 John street, New York.

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a
FIRST-CLASS HOTEL,
in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,
with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the
FIRST RESPECTABILITY,
showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.
A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

J. H. WRIGHT & CO.,
MARYSVILLE,
IMPORTERS AND DEALERS IN
Hardware, Leather and Findings,
GLASS, WHITE LEAD, HAYING IMPLEMENTS,
Miners' and Mechanics' Tools, Etc., Etc.

WE have just received per recent arrivals from the Atlantic States, a large stock of Goods in our line, purchased at the lowest rates, by our partner in New York, and shipped from San Francisco to Marysville, at the unusually low price of $3 per ton, thereby enabling us to sell them at ☞ San Francisco Prices.

Mountain Merchants who have been in the habit of buying at San Francisco, have found of late, since the rise of Goods in that market and the low price of freight to Marysville, that it is decidedly to their interest to buy here; and to convince others of that fact, we only ask them to give us a call and examine our stock and prices before going below. ROSA TO HER HUSBAND.

[The following heartfelt tribute of affection is an evidence that Rosa understands well the way to keep the "smiles of affection bright." If all wives would cherish every gift of their husbands, and testify their appreciation of their love and remembrance, we should not read, in the journals of the day such sad records of deserted homes and ruined hopes:]

On being Presented with a Floral Gift on my Birthday, April 4th, 1858.

A bunch of flowers, sweet gift, and rare,
Culled with fondest love and care;
I cannot now my thanks express
To husband, for his tenderness,
For this rare gift of early bloom,
Sweet type of love beyond the tomb.

As early as my natal day,
In childhome's home, far, far away;*
Among the rugged rocks I roved,
And culled spring mosses, which I loved;
While ne'er a flower had raised its head,
Or peeped from 'neath its snowy bed.

They told me of the far-off west,
Where plants were early "up, and dressed,"
And thitherward my steps were bent,
And here six Aprils have I spent;
Yet ne'er, on April fourth, have seen
Bright flowers spring up, with tints of green.

This simple gift shall cherished be,
A type of husband's constancy;
A two-fold joy it doth declare,
A husband's love—Jehovah's care;
He sends bright flowers our path to strew,
And gives us friends to love us, too.

ROSA.

*Vermont.

Letter from Grace Greenwood.

[The annexed letter from this highly accomplished writer, upon the subject of Revivals, will be read, at this time, with a deep interest. No reader will, for a moment, suppose Grace Greenwood can be actuated by any other than the highest religious motives, however severe some portions of her letter may be, for every careful observer, who will examine, must deplore the course pursued by some revivalists, in all parts of the country.

We feel confident this letter will do good; it is directly to the point, and bears such marks of sincere truth, and christian good will, that it *must* do good:]

Philadelphia, April 20, 1858.

Editors Farmer: In my late letters I have said nothing of the Revival, which, starting, no one knows where, has overrun the entire country; as a spark of fire falling from some woodman's pipe, in the windy autumn days, has set on fire vast forest tracts, and whelmed mighty prairies in a flood of flame. Let us hope that it may have burned up some miserable rubbish of sin and worldliness, and prepared the ground for thorough moral and religious cultivation.

This universal and, apparently, spontaneous religious movement is one of the most remarkable effects, and significant signs, of the financial revulsions and convulsions of the day. When the idols, which they have set up, are taken from them, men remember the God on whom they were taught to call, at their mother's knees. When the merchant-ships go down, and they find themselves alone on the wild sea of ruin, clinging to a miserable plank of their lost fortunes, they are glad to hail "the good ship Zion," and take passage for the heavenly port.

I sincerely wish to look on the brightest, most hopeful side; but I have seen so many seasons of this kind—the revivals of Finney, Burchard, Knapp, Maffitt, and other powerful and popular preachers; have seen how flat and doleful a reaction is sure to follow such a high state of religious excitement, that a moral epidemic of the kind, a spasmodic zeal, conversions of fear, or desperation, have a sadly doubtful character to me.

The divine spirit of our Lord, descending upon men, may awaken, impress, awe, entrance, transfigure; but it can never fill our souls with the blackness of despair, or fire us with frenzy, or throw us into convulsions. It is "the enlightener, the consoler, the peace of God which passeth all understanding."

At this time, I can but fear that there are many who flock after the gracious Lord, and bow before the altar of the spotless Lamb, because Mammon has hidden his countenance from them, and the "golden calf," they have long worshiped, has been proved but a bogus divinity; and that such, with a change of worldly circumstances, will return to the old fealty, and the old idolatry, all too speedily. I cannot but fear that those who start on the steep, heavenly ascent, in a panic, or on a run, will quickly lose breath and zeal, and backslide to a lower plane than that from which they started. Within my observation, sudden conversions, under the pressure of strong, outward excitement, have not been (with a few noble exceptions) productive of genuine piety, of the simple Christ-like type—fervent, yet practical, zealous, yet constant, the perfect union of faith and good works. The young convert is usually hurried into the bosom of the Church, in the eager glow of his first love, before he has had time to test the genuineness of his own convictions, or the strength of his own resolutions. Church-members, even the richest and greatest, with their hearts erst world-hardened, softened by Christian sympathy, and their chill veins touched with the contagion of zeal, extend to him the hand of brotherly fellowship. He yearns toward them reverently, regarding them all, in the simplicity of his young discipleship, as saints, and patriarchs, far advanced in godliness, the latchets of whose shoes he is not worthy to loose. He regards the Church as a holy Ark of salvation, containing the elect family of God, equal, loving, united; as propelled by no human machinery, but wafted safely over the angriest floods of time, by the breath of Heaven, towards the Ararat of rest, the new world of peace and righteousness. He goes on board this Ark, admitted, though most unworthy, by special grace, at the eleventh hour; and he, presently, finds it very like an ordinary packet-ship, filled with human beings, very like himself, of like passions, weaknesses, and errors, divided into cabin and steerage passengers, officers and crew. He finds it worked by human machinery, and subject to the terrestrial influences of wind and tide.

To drop metaphor; the usual consequence which follows disappointing experience is that the convert, not finding the church the perfect representative of Heaven, he had believed it, thinks it worse than it is, and its supporters all hypocrites, or dupes, and he either flings himself recklessly back into the world, or sinks into utter apathy, and passive hypocrisy, or "comes out," and is a church and "a law unto himself."

A great mistake seems to me to have been that our churches have always been more anxious to make converts than to keep them. They do not half feed and care for the flocks they have now, and while calling strange lambs into the fold, the old sheep, starved and discontented, are escaping over the crumbling walls behind. The shepherds do not seem to miss the runaways, but continue to count them as of the flock, for some time after they are scattered abroad.

It is an undeniable fact that the orthodox protestant church does not grow with the growth of the world. This, I am convinced, is because it is wanting in the true, protective, fostering, nursing, maternal spirit, which considers none too lofty to need her care; none too lowly to claim it. It was this spirit which, for so many centuries, made Roman Catholicism the mother-bird of all religions—brooding over the Christian world, and gathering all nations and tongues under her wing.

As the mother-eagle rears her young on some sublime mountain summit, faithfully ministering to their needs, and patiently watching the growth of the strong wings, destined to beat their way upward through darkness and tempest, and to winnow the pure upper air of Heaven, so should the church rear her neophytes, in the eyrie of a lofty faith, above the world; so foster and develop their immortal powers. But is she not, rather, too often like the ostrich, merely depositing eggs in the heated sand of a religious excitement, such as this, and, then, walking away with a comfortable consciousness of having fully discharged her maternal duty?

Well, happily, the universal sun of God's love is over all, and there are souls whom that alone will draw forth from the shell of ignorance, or superstition; who need no incubation, no brooding; callow birds, whom Heaven shelters and feeds, to whom the providence of the Lord is as father-care and mother-love. Such are safe, either in or out of a church organization.

In our city, the present revival seems to have been marked by greater depth of feeling, solemnity and quiet than elsewhere. It has been conducted, principally, by the Rev. Dudley Tyng, a sincere, devoted, and noble man, whose calm and Christ-like spirit has repressed all fanatical excitement, and exemplified the beauty and holiness of the truths he declared. His is a thoughtful and liberal mind, and the christianity he preaches is thorough and progressive; but, elsewhere, I believe, the movement has been conducted in much the old way, and the leading ideas inculcated have been, that to "get religion" means to go through certain experiences of alarm, conviction, penitence, anguish, despair, hope, assurance, exaltation, and ecstatic joy; and, to become a Christian, means, to be baptized, assent to a creed, and join a church. Surely, this is making the first feeble step toward, the first effort after, a christian life, the end and attainment. A profession of religion is, too often, looked upon, by young converts, as a peaceful and triumphant close to the struggles and doubts of the soul; as romantic youths and maidens regard marriage as ending the trials and tragedies of the heart, when it is, often, but the beginning.

In a revival of religion, it seems to me clear that it depends upon the kind of religion which is to be revived, whether we may hope good, or must fear harm from it. If the terrors of the old Jewish Law are preached, rather than the glorious attractiveness of Christ's Gospel, the exhaustless mercy and love of the all-Father; if the selfish fears of men are appealed to, rather than the highest instincts and divinest sympathies of the soul; if a spirit of Pharisaism, bigotry, and intolerance, is drawn in, with the first breath of the new life, there can be little doubt as to the result. The ranks of the sects may be recruited, but the real church militant, the great army of reform, will receive few accessions. Most assuredly, that only is a true conversion which is a thorough exaltation and purification of life and purpose; a practical, social, moral, and religious *reformation*. True religion begins in love to man, and culminates in love to God. Christ so declares; but this is a point whereon Christ, and many able divines, differ. Man must be fully reconciled to his brother before he can bring an acceptable offering, even that of his own soul, to the altar.

In Boston, there seems to have been the most remarkable revival of all—a revival of the spirit of the good old times, when the Puritan fathers persecuted all heretics, and hung Quakers, in the name of our blessed religion. At a large prayer-meeting in Park Street Church, the following prayers were put up, or rather, I should say, put forth, for the Rev. Theodore Parker, an honest and a brave man, whatever may be thought of his peculiar theological opinions:

"O Lord, *if* this man (Parker) *is* a subject of grace, convert him and bring him into the kingdom of thy dear Son; but, if he is beyond the reach of the saving influence of the gospel, *remove* him out of the way, and let his influence *die with him!*"

Another said:

"O Lord, if this man will still persist in speaking in public, induce the people to leave him, and come and fill this house instead of that."

Another besought the Lord to attack him in his study:

"O Lord, send *confusion* and *distraction* into his study *this afternoon*, and *prevent* his finishing his preparation for his labors to-morrow, or, if he shall attempt to desecrate Thy holy day by attempting to speak to the people, meet him there, O Lord, and confound him so that he shall not be able to speak."

Another prayed thus:

"Lord, we know we cannot argue him down, and the more we say against him, the more the people flock after him, the more they love and revere him. O Lord, what shall be done for Boston, if Thou dost not take some of these matters in hand!"

This is worse than fanaticism; it is profanity and cowardly malice; and if these prayers represent the spirit of the revival, in this particular church, it woul seem that they were having less a "Pentecostal season," than what Cotton Mather, in the old witchcraft times, called "a prodigious descent of devils."

But I cannot believe that such foolish and blasphemous petitions, uttered in the holy, merciful, and august name of Christ, voiced the sentiment of any but the most ignorant and bigoted of that congregation. They must have been revolting to the moral sense of all true Christian men and women, who heard them.

But the rash zealots roused a Numidian lion, in stirring up Theodore Parker. He has replied by two terribly powerful and scathing discourses, and "the people flock after him more and more."

The remarkable prayers above quoted, remind me of a series of absurd resolutions, which we found in an exchange last summer. I saved the slip, and will venture to give it here; though I have some scruples about perpetuating such a piece of solemn irreverence:

"A Sabbath School attached to a church at Syracuse, N. Y., recently made an excursion to Little Sodus Bay. While enjoying the sail, the following preamble and resolutions were unanimously adopted:

"Whereas, Divine Providence, in his wisdom and goodness, having favored the Sabbath School of the Second Baptist church of Syracuse, and the many citizens accompanying them, with a lovely day on this excursion, rendering the occasion agreeable and delightful to all, affording us the enjoyment of a healthy and refreshing ride over the blue waters of Lake Ontario, with its varied charming scenery; and whereas, we have been vouchsafed a prosperous ride, free from accident and danger; be it, therefore,

"*Resolved*, That we humbly acknowledge our indebtedness to the Almighty for the enjoyments received on this occasion; and that we commit ourselves to His care, returning to our respective homes in the hope of receiving similar blessings of his Divine will.

"*Resolved*, That we heartily return our thanks to Stone's Sax Horn Band."

The religious excitement seems now to be slowly dying away, as all excitements must, sooner or later. If it has aroused any soul from the cold torpor of materialism; if it has lifted any soul from the slough of sensuality; if it has arrested any soul in the mad pursuit of gain, it has been blest of God, who will overrule the temporary evils and errors which may have accompanied it, for the lasting good of the world. Let us rest in hope.

I have given you quite a long sermon; I did not intend it; but "what is writ is writ." I leave you to add, the "would it were worthier."

Adieu. Grace Greenwood.

A Letter from "Florence Percy."

A Song for Spring-Time—Contrast between "Down East" and our Golden State—the Season of Early Flowers—Song of Robin Red-Breast—the Pine Forests of Maine—Blossoms of the Adder's Tongue and May Flowers—Blossoms of the Maple—the Farmer and his Plow—the Sports of Children among the Flocks and Herds of Young Animals—the Little Milk Maid—the Voices and Memories of Home—the Season of Fruits and the Glories of Harvest—a Tributary Wish for our State—with a Generous Wish for Friends.

Portland, Maine, April—1858.

Editors Farmer: We have this morning been looking over the pleasant pages of our last instalment of Farmers, reading aloud now and then some sunny item in which allusion is made to fruits, flowers, and gardens, as things which are even now present with you, until our office-corner has acquired a summeriness quite in advance of the season; and in return for the touch of June which you have given us, we are minded to inclose to you in our letter a breath of this fresh northern air. A cool return for kindness: is it not? But this breeze is not cold, though fresh from the mountains; tempered by the loving sunshine, and scented with sweet and woodsy odors, it would come gratefully even to your nostrils, oh! dweller among the warmer airs of a more favored climate: and sweetlier still, because it fanned your cheeks and tossed your hair in "the days that are no more."

April—May! What magic in the words! They are full of the very soul of spring-time, even in our chilly New-England; fragrant with sprouting ferns and freshening mosses, and musical with the voices of children newly emancipated from close rooms to bound again after hoops, or grow rosy at ball-play. True, April is sometimes a trifle coquettish, and occasionally, downright uncivil; but she does many good offices, and brings many pleasant things. She puts a little touch of spring-blue in the sky; she sprinkles the trees with bashful brown buds. She shows us a few half-frightened wild flowers; and, best of all, she brings tenderly in her bosom the first robin, his wings all a-tremble with delight, and his ruddy throat brim-full of song, the welcome spring-reveille of New England.

Open the window. Do you hear him? Dear red-breasted warbler! his is the only voice which keeps the sound it had in our childhood. Other voices, though ever so much beloved, grow deep with maturity, cold with change, harsh with unkindness, or querulous with age: but the first robin's—never; round, full, and joyous, its gladsome prophecy is the same as in years agone; only now it brings a little homesick ache to our heart that was not always there. But that is no fault of the robin's. Where is he? All this while we have been searching with our eyes all through our neighbor's garden, where the evergreen trees and budding shrubbery would afford him a sheltered concert-room: but we cannot see a gleam of his ruddy breast among the leafless branches. Dear little minstrel! his song bubbles up from his heart so fast that he cannot stop to form it into regular strains and measures, and so only opens his mouth and lets it come, gush after gush, like water from an inexhaustible fountain. Ah, there he is, on the veriest tip of that tall elm; how the light branch throbs to his music! So sometimes fall on our delighted sense the "voices of the singers," and we, in our blindness, never see them, because we do not look for them in the right place; because, forsooth, when the voice is falling from the very gate of heaven, we will persist in searching for its source in a frog-marsh!

You have many Maine men in California: we wonder if any of them are just now longing for an April smell of our pine woods? If they are thinking of the yellow blossoms of the adder's-tongue, of May-flowers and violets? You in California may have fairer flowers, but you have none so dear to the heart of a New Englander; and if there be one among you whose heart is not yet so crusted with gold but that it yearns for the waking woods and the freshening brook-sides, we should like to give him this fragrant spray of *a-butus* which some kind friends has left on our desk. Wouldn't it bring him a breath of home-air, a thought of home friends, a gush of home love, and a host of home memories?

And here are we, sympathizing with the poor home-sick souls who are exiled from the spring sights and sounds of Maine: when verily, although we are in the very midst of them, and in sight of those same dark woods, we have not yet taken our first forest ramble; the sweetness of piny smells, the charm of barky odors, is not yet upon our garments; and we are as innocent of any spring love making with nature, as the veriest exile among you. But it is scarcely our fault; "the cares of this world, and the deceitfulness of (other people's) riches," have conspired against our Maying propensities, and put them down. But though through great power of self-denial, we do daily resist the spirit which calls us forestward; though we sit here, day after day, writing industriously, hemmed in from all the sweet influences of the out-of-town world, by dull manuscripts, day-books, cash accounts and ledgers, we are free to confess that our heart's "in the highlands."

In proof: only this morning as we were passing along one of the busiest streets in this city, our head full of some perplexing worldly problem, befitting the place, and our eyes glancing carelessly on whatever we met or passed, we became suddenly aware that we were standing quite still on the curb-stone. We had in our absent-mindedness, stopped beside a country man's cart, which was quite loaded down and obscured by its burden of young maple trees, brought into the city for sale, to adorn the door-yards of our shade-loving citizens. Now, we were not thinking of trees at all; our *head* was not cognizant of the matter at all; but our *feet*, true to their old instincts, remembered since their gipsying days, led us directly to this little snatch of the woods—poor uprooted trees, dragged from their fragrant home to relieve the close air and tired eyes of the city. You may laugh; but if, as is often said, some people have brain-power, intelligence, in their *hands*, why may we not have *souls* to our feet? But those trees: they were covered with big ruddy buds, wherein lay closely folded the crimson-fringed blossoms, promises of the beauty and fragrancy to be; and, with a sigh, we laid tenderly back the twig we had bent toward us to look at, and moved along, while the proprietor of the cart looked after us, large-eyed and wondering. Perhaps we had been thinking aloud.

But, to return, although we are a denizen of the city, at present, we know very well the country phase of April; we know how the farmers are plowing out on the sunny hill-sides, and how they come in at noon with sweat on their foreheads and mud on their boots, remarking that the frost is not yet quite out of the ground: it will take a little more rain for that. Ah, well for the farmers that the frozen heart of the earth is capable of being melted by tears: there is such a difference between the earth and the *world!*

I know how sweet is the sappy smell of the odorous wood-pile at the door; I know how the children are having jubilees with young calves, which frisk clumsily about, glad of their newly-founded life, shaking their pretty heads with evident disgust if they happen to get a little hay in their mouths, and steadily resisting all attempts at teaching them to drink. Haven't we undertaken the thankless task many times in other years, with no better success than was involved in getting our fingers chewed into paper-rags, and our neat morning wrapper spattered all over with new milk, while our refractory pupil whisked his head from under our restraining arm, and with a sidewise jump away from us, stood licking his milky nose, and looking with malicious triumph at our wet dress and slopped slippers, winking his great bronze eyes so demurely all the time, that we couldn't, for the life of us, harbor any spite against him, and so ended the quarrel by having a romp with him all up and down the barn-floor: haven't we tried it? We know, too, how the little frizzly lambs chase each other, round the knolls in the pasture, or follow their mothers shyly to the bars, where little girls, with sun-bonnets swinging on their arms, to keep the sun from their faces, of course, come coaxing the sheep with a dish of meal: not so much solicitous for the mother-sheep, as anxious to wheedle "the little new lambs" into neighborly nearness; dear little lambs, with their funny three-cornered faces, and industriously restless ears, their bright eyes, and unnecessary length of limb; and the colts and the sitting hens, and the downy egg-shaped chickens, rolling over the ground with their everlasting "peep, peep, peep!" Oh yes, we know by heart the farm-side of April and May!

But, you dwellers in a sunnier land, you will smile at my rhapsodies over a few green leaves, a few swelling buds, a few memories of spring in the country: for the Farmer tells weekly of beautiful flowers and tempting fruits which you are enjoying, while we, in Maine, are living in the memory of last summer's glories, and the hope of the next, which last, oh, joy! is near, even at the doors.

But this will do for April gossip; and so, dear Farmer, we leave you to the pleasant task of chronicling the agricultural and other successes of your flourishing State, for another season; hoping heartily that in so doing you may also gather unto yourself prosperity and much happiness, even as this spring-time world will drape itself with beauty and fragrance and sunshine. And so, farewell. Truly,

Florence Percy.

[For the California Farmer.]

Shut the Door.

We trust this brief, yet comprehensive counsel, from our most earnest and excellent correspondent Rosa, will indeed cause every one that shall peruse her words, to pause and consider, then adopt and practice, and they will ever bless Rosa for her inestimable letter: —

"The wind blows chill across the moor;
Come in my son, and shut the door."

Yes, "shut the door," and put a good armful of wood on the fire, for these howling winds of April sift through every crevice, and chill every nerve in the body. And you fair maiden reclining on a sofa, with that gilded-covered, trishy-trashy novel in your hand, "shut the door" of *that book*, lest it fill your susceptible imagination with the love of light literature, and make you despise the work which your sensible mother gives you in the kitchen, to renovate and strengthen your body, and thus improve your mind. Think not your delicate fingers fit only to work embroidery, and pet a lap-dog, or turn over the leaves of such trash. Shut the door of your heart against all such frivolous amusements, and take up a work on Physiology, and "know thyself." Shut the door against that brainless fop, with a cigar in his mouth and the smell of brandy on his lips; shut the door against him, and beware of him, if you would not repent in sackcloth and ashes.

Young man! Shut the door of thy heart against indulging in that fit of anger. Shut the door of thy lips against that profane word about to be uttered; pause and beware. Shut the door of thy lips against that filthy weed, and its twin brother strong drink, if thou would be *honored* by the *maiden of thy choice*, and be *approved* of God and good men and angels. Shut the door against all vile and sinful practices, lest God Almighty "shut the door" of His Kingdom against thee.

Woodland Cottage, April, 1858. ROSA.

Flowers for Pauline's Grave.

by bessie.

[The following beautiful sketch we found in the Star of the Pacific, published at Sacramento, a handseme little paper, devoted to the brotherhood. It appeared on Mayday, the "birthday of Spring flowers," in most countries, and coming as it does from one so well known and esteemed as the writer is, among our readers, we know they will peruse it with a deep interest, for the soothing strains it bears to weeping hearts:]

'Twine ye a wreath from Spring's earliest flowers,
Moistened by pearl-drops, and evening's soft showers,
The crocus, and lilac, and violet blue,
A bough from the locust, a branch from the yew.

Oh, 'tis meet ye should bring and scatter them there,
For she was a flower of beauty most rare,
Earth could boast of no fairer 'mid the gay throng;
Heaven holds not a sweeter, a lovelier one.

As I was strolling leisurely through my garden, one day last winter, I was a little startled by the unexpected presence of a manly little fellow, son of W. H. Watson, M. W. G. M., who said: "Will you please give me a few flowers for my sister's grave?" I had not many to offer, for the most delicate and beautiful of all the flowery race had resigned their sunny robes, and shrunk into their beds of dusky umbrage. But the affectionate appeal from the tiny voice at my side, awoke in my heart a sad and painful thought. Then was recalled with vividness, the gentle being for whose grave they were designed, and on which the turf has been kept green, seemingly by the tears of affection shed upon it. She was to me a dear friend, and a holy tie—that of Sabbath School teacher and scholar—once joined our hearts. Together we had sat in earthly temples, and held sweet communion; and now, as I write, there is a beautiful memento, with her name upon it, lying before me.

It needed not this "token of friendship," sweet angel, to remind me of the giver; but it will be held sacred, in after years, when thy little life will seem like a far-off pleasant dream, too ethereal and blissful to be reality. Sweet memory; it will outlive the fading flowers that bloom along my pathway, and grow brighter and fresher as life becomes impatient for the invisible.

She left us in the bright May-morning of her existence, ere her pure soul had dreamed of sin, or her guileless lips had pressed the bitterness from out life's realities; just as the golden gate of childhood 'gan to open fair, while the little morning star (Aurora's harbinger) glimmered softly in the matin sky. Too bright it glowed; for beauty such as her's, allures our thoughts from Heaven, and woos us from the homage due to Deity. Too soon it waned; for our poor bankrupt hearts forget the blushing morn that gave such promise of a glorious noon; we only feel the darkness, deep and dreadful, following its decline.

Flowers for Pauline's grave? aye, strew them softly o'er the sacred spot; they will exhale a hallowed incense, for we have wept upon them. Lay them gently there; the kindly dews of Heaven will deign to lend their pearly distillations to keep them fresh and beautiful; and could they speak, they'd bear a message to the golden shore, and say, "how pure the shrine in which thy memory's held."

The graveyard, where they have made her narrow bed, looks beautiful in this sweet spring-time; the lupine, the coral-blossom, and the star-flower, whisper softly of their gentle sister's slumbers.

Sleep on! sleep sweetly, precious dust! and morning's dewy kiss, and evening's whispering breath, and moonlight's mellow ray, and song of blithest bird, alike will fall upon the holy spot, thy resting-place; and loving hands will daily strew it o'er with Flora's richest gifts.

CONTINUOUS ACTING PUMPS FOR DEEP WELLS.

The annexed cut represents an arrangement of Pumps for drawing and forcing water from deep Wells, which may be used with either a single or double lever. The standard or upper part is placed upon the platform at the top of the Well; the cylinder, with the air-chamber attached, is bolted to a plank, and placed in the Well, within fifteen or twenty feet of the water (the nearer, the easier will the Pump work).

The air-chamber is connected with the standard by lead pipe, as represented, and the water is discharged at the surface by the spout. By attaching a hose, by means of a coupling, to the spout, the water may be thrown in every direction, seventy-five or eighty feet; serving to irrigate gardens, etc., as well as to protect buildings from Fire. Discharge, at each stroke up or down, forty-two cubic inches.

By lengthening the lead pipe and connecting-rods, these Pumps may be used in Wells of any depth.

Read the following, from among many certificates given voluntarily by those who have had them in use:

NAPA, October 14, 1857.

J. S. PAXSON—*Dear Sir*: The Deep Well Force Pump, Number 10, which you sent me a month ago, works admirably, doing all that you said it would. It raises water from a well fifty-three feet deep, discharging in a steady stream. It is the easiest working pump I ever saw. My little son, seven years old, can pump one hundred gallons at a time, without feeling tired or stopping to rest.

Good as this pump is I would much rather have had the Double Pump, Number 16, but my well being too deep, would not allow me to use it. I shall take much pleasure in recommending your pumps, which I can do with much confidence.

Very truly yours,
(Signed) BOON FLY.

FORT VANCOUVER, Jan. 20, 1858.

JOS. S. PAXSON, 48 Cal. street, San Francisco:

Dear Sir: The Patent Double Acting Lift and Force Pumps, furnished this post, through Messrs. Allen & Lewis, your Agents in Portland, give entire satisfaction, and they are, in my estimation, superior to any Pumps I ever used.

The Deep Well Pump, Number 10, raises water from a well one hundred and ten feet, and works so easily that two men readily pump a barrel full in a minute and a half, and, by attaching the hose, they throw the water, in all directions, fifty or sixty feet.

It gives me much pleasure to add my testimony in favor of your improved Pumps.

Yours, &c.,
(Signed) RUFUS INGALLS,
Capt. U. S. Army.

The above are for sale, together with many other patterns of my Improved Double Acting Force Pumps, by

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.
Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

J.L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

Letter from our New York Correspondent

NEW YORK, April 20, 1858.

EDITORS FARMER: The 20th of the month reminds me that the steamer for California leaves to-day, and that if I would send a few lines to my old friends, I must be up and doing.

As for news, there is not much of the genuine article in the market. I cannot send you anything startling or very terrible and thrilling, to *comfort and cheer you* away out so *near sundown*. Can't help it, the article is not in market; but they are getting some "*fixed*" in "*Bosting*" or "*thereabouts*," which you shall have when out.

This reminds that Mr. Everett, of Massachusetts, is delivering his great lecture on the Life and Character of Washington, throughout the South, realizing about $1000 per night, for the benefit of the Ladies' Society for the purchase of Mount Vernon. Now that the ladies have engaged in this good work, it will surely be accomplished. God bless the ladies, they seem the first to begin a good work and the last to be discouraged at the greatest difficulties.

COL. BENTON

Is dead. He breathed his last on the 19th inst. Most, or all, of the great men who ruled this great people thirty years ago, have passed from among the living. Clay, Webster, and Calhoun, the brilliant trio; when will earth behold their equals again? Col. Benton, though not their equal, has made his mark in the history of our country. It seems but a few days since the above named gentleman, together with Silas Wright, Southard, and Frelinghuysen of N. J., Benian of Georgia, Grundy of Tenn., Preston of S. C., and Crittenden of Ky., were senators together, in the full vigor of mature age. Crittenden is the last link in that brilliant circle remaining on earth. Many generations may pass away before so many such able men will, at the same time, be members of our national legislature. Peace to their memories.

CONGRESS

Is nursing Kansas yet. One party dandles her one way, while the other rocks and cajoles her into leading strings, which, like a sturdy, saucy, wayward young Miss, she throws to the winds, telling all concerned that she can take care of herself. The President *weeps* just a "*leetle bit*" in homeopathic installments, when he thinks of the pert, saucy, little vixen Kansas. If he had done his duty and been married, he might have learned "a heap" about such matters; but now, in attempting to hold poor Kansas upon his bachelor knee with one hand, and feed her with pure democratic pap with the other, I fear he will do it so awkwardly that his pet will kick out of his lap, and in the fall, knock the stool from under the venerable head nurse, and leave him in an ungraceful fix upon that part of the house *usually covered with the carpet*.

THE WEATHER

Is remarkably fine, and the crops are represented as looking very well for the season. Our peach and other fruit trees are now in full blossom, and the country, I learn, is looking very finely indeed. I have not been out of the city for more than sixteen months; but, judging from our city parks, I am sure the country must be charming, for "God made the country and man made the city."

The ground was broken for the New Croton Reservoir, on the 17th instant. It will cover over one hundred acres of ground, and will extend from 86th to 106th street, just one mile. This will be within the great central park, now being laid out.

The religious and other anniversaries are at hand. Extensive preparations are making for them.

THE YELLOW FEVER

Is at the Quarantine, brought there by the U. S. frigate Susquehana. It is hoped that it will be confined to that locality.

THE PACIFIC RAILROAD.

This great enterprise has been thrown overboard by the Senate for one year, at the end of which time it will probably be kicked out again. It seems to be a bank of political capital, upon which all the bankrupt politicians of our day may draw to any amount, for electioneering purposes. As nothing can be made to bolster up those who cannot stand upon their own merits, until the next election it has been deemed quite orthodox by the party now in power to *gull* the dear people; and the more they can do it genteelly, the better it is, and the heartier laugh they will have over it. I have no hope that they ever intend to build this road. Government *can be a scaly fellow*; hold out many hopes, and dash them to the ground, snap his fingers at the people, smoke the choicest regalias at the white house, hurra for the party, and tell the people to build their own roads, and then if they are not right, or in the best place, they can't find fault with them, *not they indeed*.

The North will have the route through the snowbanks, and the South through malarious swamps and quagmires; the one fears slavery, the other scents abolitionism; the one is perfectly horrified, and the other waxes *exceeding fierce on the subject*. Well, let them go ahead, and we, the people, will build our own roads, and then make the government pay roundly for transporting his mails, armies, stores, and even *himself* over them.

I have no confidence in any movement in the right direction until the whole subject comes before the people somewhat in the form I mentioned in an article published by you two years ago this month, in this manner: that on each vote should be printed, "Pacific Railroad, yes or no." Let every candidate who comes before the people solemnly pledge himself to vote for the road over the central route, and use all their efforts and influence to have this great work done without delay. Then let no man, East or West, put in a vote except there be "yes" on the vote placed in the ballot box, and no doubt there would be almost a unanimous vote in its favor. Let this road be constructed at once. Then, if the increase of travel and business generally require a road on the Southern or Northern route, private enterprise will do the work, without any aid from the public treasury.

Why not have a company formed with a capital of 25,000,000, with, say, two per cent paid in, and with that commence the work on the central rout, and finish a section, and ask government for aid in some way on the road *actually located* and commenced, so that there can be no bickering about the route, that being settled beyond all peradventure. As the whole Union is interested in it, the work could be finished by private capital in ten years. If left to "*Uncle Samuel*" I have no hope that it will be commenced in thirty years, for the South never will consent to any route unless it runs through every plantation and one-horse town south of Mason and Dixon's line, down to the equator; and the North will be equally determined that their venerable uncle shall not make railroads *strictly for plantation* purposes in the South.

So let the people make the road themselves, and make the old uncle shell out when there shall be a muss out West, and he is obliged to send his troops on the road, eh! Then, when he sees the cars thundering along the plain, if he wishes to *put his letters or papers on*, make him pay roundly for it.

FROM EUROPE

There is nothing of any special importance. All is quiet in England. In France there is an apparent calm; but there is a terrible ground swell that rocks the deep foundations of the Empire, and no one can tell when or where the subterranean fires may burst forth and involve that country and Europe in one fearful and sanguinary struggle. The train is laid, and only needs a bold hand to seize the torch and apply it to the fuse, to convulse France and the whole of Europe.

ANOTHER SEVERE BATTLE

Has been fought in India. Many thousands of the rebels were slain. Lucknow was surrounded by 50,000 British troops, who were expected to commence the bombardment early in March.

FROM CHINA AND JAPAN

No additional news has been received of any great importance. Some American citizens have been shamefully treated in China. Uncle Sam will probably have a talk with these disciples of Confucius, and teach them a few lessons of Yankee philosophy, religion, and civilization, and then make them pay for it with tea, until you get to raising *our* teas in California. Who cares whether the leaves are rolled up or not, if they are only good? Adieu. B.

P. S. I forgot to say that the Collins line of steamers has been sold, and are for sale again. Rumor says that the city of Newark, N. J., wishes to buy them to connect with a line of daily stages to run from that city to *Communipaw*, or some *other town somewhere* in New Jersey I believe. Who dares say that New Jersey is not a growing State? B.

EDUCATIONAL.

The Collegiate Institute at Benicia, Cal.

THE School Year at this Institution, is divided into two terms of five months each. The Sessions will open on the 4th of January and the 5th of July; closing on the 4th of June and December.

To the Patrons of the Institute we would say, that the facilities for obtaining a good education have been much increased this year. The range of studies will be ample, embracing the Ancient and Modern Languages, and a thorough course in the Physical Sciences. Neither are the accomplishments overlooked: in Piano and Vocal Music, we have the best Teachers in the State Thoroughness in the Elementary Branches, before advancing into the higher studies, will be a primary requirement. We shall continue to follow, in our government, school arrangements and method of instruction, the Normal School or Prussian system, which has been adopted in the Eastern States with so much success.

Pupils will be fitted for the University, or will be trained with a view to the completion of their education in this School, as may be requested by the parents. Where no special directions are given, the course of the Institution will regard the Modern Languages, Natural Sciences and Practical Avocations of life, as the sine qua non of a good education, and the Ancient Languages as accomplishments.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location of the School is easy of access from all parts of the State; the buildings are excellent; and the quietness and healthfulness of the village are unsurpassed by any place on the Pacific.

TERMS, PAYABLE QUARTERLY IN ADVANCE:

	PER MONTH.
Tuition in the Higher English Studies (including Natural Philosophy, Chemistry, Algebra, Geometry, &c,	$ 8 00

STOCKTON FEMALE SEMINARY.

THE First Session of this Institution will commence on Monday, March 1, 1858, and continue five months, under the charge of Dr. C. Collins and Lady, assisted by competent instructors.

FEMALE INSTITUTE.

THE Female Institute in Santa Clara, under the management of James Rogers, A. M., still enjoys a good degree of prosperity. The Board of Instruction is ample, and the Terms of Tuition as liberal as in any school of equal grade in the State.

LINDSEY'S

Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

HOTELS, &c.

MERCHANTS' HOTEL,

MARYSVILLE.

THIS OLD ESTABLISED HOUSE, in order to meet the demand upon its increasing business, has recently been enlarged by the addition of a number of NEW AND ELEGANT FAMILY ROOMS, a new Promenade Gallery of Two Hundred Feet in length, and has been otherwise renovated and improved, making it one of the largest and most commodious, as it always has been the most quiet and orderly Hotels in the country.

The Proprietor, in returning thanks to the Merchants, Business Men and Citizens of Marysville, and to a large portion of the Traveling Public for their generous patronage, assures them that no pains or expense will be spared to make this permanently, in all that constitutes a First-class Hotel, the best in the city.

The Merchants' Hotel employs no runners. It is located on **First street, near the New Bridge,** on the Yuba river, where the Proprietor (always on hand), will attend personally to the wants of his customers, and hopes and expects the same liberal patronage the House has always received from a discriminating public.

The Gopher—a Remedy.

We present "Alpha" to our readers. He tells of his own *murderous plan*, by which this pest can be cleared from the orchard and garden. Not having heard from this "chap," of late, we had hoped he had been *scared* away. We shall be glad to hear from our readers, and all interested in the gopher. —

BROOKLYN TOWNSHIP, Alameda county, May 5, 1858.

EDITORS FARMER: Permit the writer to offer a few remarks in regard to that most destructive pest to the agriculturist, and others, in this portion of the county, i. e., the gopher. Much has undoubtedly been said and written, in regard to their habits, as well as to the most judicious course to get rid of them. Their appearance is perhaps known to all, being in size as to the rat, with an open countenance, exhibiting four long teeth, sleek coated, and tail drove up; with a pouch on either side of the neck, by which means they are enabled to throw out the dirt; expeditious traveler, but unwelcome guest; having the audacity to help themselves to what green things are before them, providing they are tender and nice, in the way of vegetables, as well as the roots of young trees. It is presumed that they breed monthly, having not more than six, or less than four, at a time. They have underground main avenues, running in every direction, in the making of which they pack the dirt as they progress in their work; from this avenue they emerge to the surface, for food, throwing the dirt behind them, as they make their way out. The last dirt is pushed out upon the surface of the ground, and immediately appears the gopher, ready to haul into his hole whatever green thing may chance to fall into his way. Should you approach too near, he at once retreats, turning in his hole and throwing the dirt behind him with such rapidity that you can never catch them by digging. At other times he retreats, leaving his hole open. Deep plowing breaks up his avenues, and frequently throws them upon the surface, while they grope around, lost without a hole. It is evident that they are short-sighted, from the fact that their holes may be seen where there has been no vegetation, and they continue to travel until they hit upon the right spot.

The best way to get rid of this vermin is to plow deep (they do not like loose soil), and, whenever you see a fresh made hole, take a small piece of cabbage stalk, or potato, make a slit, and put in a small quantity of strychnine; if the hole is open, put it well in, and cover it over; if recently closed, take a spade, drive it down its length, and find the hole. This is a certain as well as an effectual way to overcome them. They die in the ground, leaving no danger to be apprehended, in the use of the poison, to barnyard fowls, or cows. Irrigation, too, has a potent effect, where large quantities of water can be thrown upon your orchard, or garden. Direct the water into their holes, and you will be enabled to drown out a few. Some persons shoot them, which I conceive to be a great waste of time. The poison kills many at a time, as the old and young partake of the choice morsel, and cease their labors. Johnson, Druggist, Washington street, San Francisco, sells a pure article. It kills every time. Suicides will know where to find the right sort.

Dr. Haile of Alameda states that he cleaned them out of his nursery, containing many acres, by the use of this poison, in a short time, and the writer has found it equally efficacious, thousands having succumbed, by the continued use of this same agent. Hoping that your readers may find some advantage from a perusal of this communication, I will leave the subject ALPHA.

Second Growth of the Potato.

SAN FRANCISCO, May 24th, 1858.

MESSRS. EDITORS: Permit me through the FARMER, to make an inquiry of some of your readers or correspondents who may be practical farmers, as to the cause of a phenomenon which has occurred this season to my potato crop.

I have a ten-acre field of potatoes, the tops of which look as well and thrifty as anybody could wish, and they are just now in blossom. Last week I made an inspection of the crop, by digging a dozen or twenty hills in different parts of the field, and to my surprise found in every instance the young half-grown potatoes *all* sprouting, and making a second growth. Each hill contained about a dozen potatoes, varying in size from that of a hazel nut to a goose egg. Some had sent off shoots, and these had young and smaller potatoes attached to them; and in some instances, even a third had grown from the second, like links of sausages. The tubers were not half grown nor half ripe.

The soil is a good sandy loam, on a slope to the southeast. The ground was plowed on the 20th of December last, a foot deep, and cross-plowed and harrowed the 10th of February. It was thus well stirred and thoroughly pulverized. From the 20th to the 27th of February, one-half of the ground was planted with red potatoes, choice selected seed grown in Alameda county. From the 13th to the 17th of March, the remainder of the ground was planted with red Oregon seed. The seed was cut, as is usual, and planted in rows three feet apart, and the pieces dropped fifteen inches apart in the rows. The rows were laid out with a one-horse garden plow, and the seed covered with the same.

On the 17th March, the potatoes planted in February were up, and the rows visible. They were then harrowed across the rows, which leveled the ground, covered up and removed the young weeds and stirred the soil. The same was done in April to those planted in March. By the 1st of May the potatoes had grown to six inches in hight, and the one-horse plow was run between the rows, ridging up the ground against the tops on each side without covering them. This covered up the young weeds and loosened the soil. A man followed the plow with a hoe and cut up the weeds which the plow had not destroyed, and removed the dirt from the tops where the plow had occasionally thrown it too high. Nothing has since been done to the crop. The field is free from weeds. The crop *above* ground looks promising, but underneath it promises to be not worth digging.

Now what is the cause? Both kinds of seed, and planted at two different periods, a month apart, present the same appearance now. Is it because of *plowing* between the rows after the potatoes were up? Yet this plan is often adopted without any similar misfortune. Or, it may be because of too early planting, so that the rains came upon the crop when the tubers were growing and caused them to sprout again? Perhaps "Agricola," or some other intelligent and observing farmer, will do me the favor to explain the mystery. Yours, truly, SAN MATEO.

Splendid Horses.

ON our trip up to Napa Valley, we tarried awhile at Benicia, the depot and terminus of the "Great Railroad now about to connecct Marysville with the Bay City *via* Vallejo, Benicia, etc."

While at Benicia we visited Neville's Stables, to see the famous stallion *John Kerr*, owned by T. J. Bedford, Esq. This animal is of the heavy draught-horse species, Canadian, and of very remarkable qualities; the very animal for procuring a race of real "work-horses." John Kerr is a dark chestnut, of remarkable points, and all excellent. He was brought across the Plains in '52. Those who desire the very best kind of farm-horse should secure this kind of stock. His weight is about 1700 pounds.

Young Argyle—This superb stallion stands at the Solano stables, opposite the Solano House, at Benicia, and for size, action and beauty, we look upon him as one of the finest animals in our State. Young Argyle is owned by James McGee, of Morocco Valley, and he now stands alternate weeks at Benicia and Suisun city. His color is between a light bay and chestnut, inclining to a cream, and it is rarely we find a horse of so graceful carriage. He reminds us of those beautiful "wild Arabian coursers," as his action and the carriage of his head seems so perfectly natural. He has made his three-mile heats in 5:45 and 5:40. His sire Old Argyle; dam, of the Sumpter stock.

Big John—A large and very fine stallion stands at Brown's stables, at Napa, bearing this name. He is very large and finely formed in frame, fine neck and head, good action, and splendid limbs. He is four years old, and weighs about 1300 pounds. Sired by Davidson's Morgan, one of the fine Vermont horses. Big John is owned by G.W. Warden, Esq., of Clear Lake, and is certainly a remarkable animal for his years.

Black Hawk Gen. Scott—This noble horse stands at Shattuck & Co.'s stables, Oakland. This animal was sired by the Vermont Black Hawk, and his size, form and action, mark him as one of the finest breeders on our coast.

California can boast of as fine entire horses as can be found, and there can be no doubt that with our climate, and a proper care on the part of those who control this class of stock, in a few years we shall show some of the finest stock in the world. One thing is very important, those who own and control the first class of breeding stock, should take a stand never to permit their animals to degenerate by a union with stock of an inferior quality; for by such a course the name and fame of sire or dam are reproached by their progeny. The great object should be to make the subsequent stock of as high a character as is possible, and this never can be done when a careful regard is not had to the character of the stock with which the sire unites. We hope owners of blood stock, and all fine stock, will look to this matter, and pay a higher regard to the stock they introduce into our State, than merely to labor for the "almighty dollar."

The Castilian Rose.

EDITORS FARMER: Is it on account of uncongeniality of climate, or the want of skill on the part of the cultivator, that the Castilian Rose does not flourish in this section of country, say San Francisco and vicinity? What is the reason that it does not, as a general thing, thoroughly develop its blossoms? IN COG.

New Pears.

WE present our readers, says the Horticulturist, with outlines of some new French Pears, with high-sounding names, from a valued correspondent in Belgium; but we do so with a caution attached. It may save our friends from imposition.

No. 1, Général de Lourmel.—Large, round; dark green, spotted and *waved* with dull red and brown. Seedling, 1847; produced in 1853—good quality. November. Comice of Angers.

No. 2, Général Bosquet (Flon grolleau).—Light green; slightly spotted with red. End of September. Second quality. Seedling, 1845; production, 1853.

No. 3, Maréchal Pellisier (Flon, Ainé).—Light olive green, with dull red on the sunny side. End of September. Second quality. Sown in 1845; produced in 1853.

No. 4, Lieutenant Poidevin.—Yellowish-green, spotted with red and brown. Seedling of 1845; productive in 1843. Second quality. March to April. (Perhaps the most valuable, being *late.*) (Flon grolleau.) How pears of second, and only *good quality in September*, when we are in the enjoyment of a host of delicious pears, can be admitted in catalogues on the faith of their high-sounding names, and large sizes, seems to us somewhat surprising. They are nearly all very new, and of course will be unsteady till their standard value be settled or *sealed* by some years of cultivation. It is possible that some may improve in quality; but our experience with foreign pears has made us acquainted with a circumstance which leaves us little hope of such a result. Pears of second quality, or deficient in high, juicy, buttery, and sugary characters, in their native transatlantic countries, are uniformly of *third* quality in this climate; while rich and *generous* fruits, as the *Lucrative, Flemish Beauty, Beurré D'Anjou*, etc., etc., are perhaps better, or, at least, as delicate and rich here, as in England or Belgium—as good as in the South of France.

Strawberries.

The best specimens of fruit, the largest, and the most highly colored and flavored, are always from those beds where the plants are kept thinned out to rows or "hills." If the runners cover the whole surface, the fruit is smaller, more shaded, and the flavor is not in the highest degree of perfection. But the cultivated bed has one drawback: the rain dashes the soil upon the fruit. This evil may be easily remedied, by placing the short grass which is obtained by mowing the lawns, between the rows. Tan has been recommended, and it does tolerably well, but it is itself not so clean as is desirable. Straw, chopped short is, used by some, and is cleaner and better than tan. But the soft, clean, fresh grass, only one inch or two in length, obtained from lawns, is much preferred to either, and is easier and frequently renewed. The moisture which it assists in retaining in the soil, promotes the larger growth of the fruit. If irrigation is applied, this covering retains the moisture in the surface soil, and prevents evaporation and crusting. We have known the fruit while ripening to be doubled in size in twenty-four hours, by a plentiful supply of water, dropped on the plants, and the mulching given them is next best to constant watering.

The above capital teaching we clip from one of our Eastern exchanges bearing the name of the Farmer. We endorse these sentiments fully; and although we have no heavy rains in summer to "dash the soil upon the fruit," yet we would recommend the plan of covering the space with grass (new made fine hay) after the fruit is set; but be sure previously to have the ground deeply cultivated and finely prepared and rolled smooth between the rows or hills. After this is done, cover with the hay. And then we again urge the plan of *watering strawberries in summer*, which we presented in the FARMER of May 7th, number 17. With such a plan, a large increase of fruit may surely be had.

One great cause of the deterioration of this fruit, arises from permitting the vines to *run out*; the plant cannot make *vines* and *fruit* too, at the same time, without injury to both, during the bearing season; the *runners* should be clipped off. When young plants are watered, a certain portion of the vines should be reserved for that purpose especially; these should be kept in a high state of cultivation, the ground around them deeply and finely cultivated (no straw or hay around them as above), and in no case should any *stool plant* be permitted to make over a given number of plants; three or four plants are sufficient to draw from the "mother plant" at a time. Another rule should be strictly observed: after the *first* young plant becomes *rooted* in the earth, this runner should be stopped, only allowing each runner to make a single plant; by this means the whole strength of the parent vine is given to nourish three or four plants. This plan will secure strong, well-rooted plants, such as will bear the *first year* if transplanted.

As soon as this young plant becomes rooted, separate it from the mother by cutting the cord, and thus the young vine will draw its support from the *earth* instead of the mother plant, which now can recover from the drain it had to support those young plants. Plants grown in this way are called *shoulder plants*, and it will always be observed that each successive plant upon a runner grows smaller and smaller. This should teach us that none are fit to re-set but the first; consequently, if none but the *first* were permitted to grow, the parent plant would be less injured, while at the same time the *young plant* would be better, stronger, and more likely to produce the best fruit.

We must condemn the practice which exists among sellers of strawberry vines, of permitting their plant-bed to make great masses of young plants; grown thickly together, not one-half of them can ever be good bearing vines. A reflective reader will at once see that our plan is the correct one, and we trust that in all future operations with this delicious fruit, a better practice will be adopted.

AN IMPORTANT CASE.—The Supreme Court at Washington, lately decided the celebrated "Reaper" case against McCormick, and in favor of Manny. It is stated that a million of dollars is involved in the suit.

Home Manufactures.

We take from the Alta the annexed article, and cannot forbear indorsing the sentiment of the writer (who we believe is not unknown to us), with regard to the true interest of California, in cherishing Home Manufactures. We are also pleased to find our opinion, which was first formed from an inspection of the model, merely, of Willard's Sower and Harrower, so well sustained by a practical and scientific farmer, and competent judge, as we know the writer to be. His notices of the *work shops* of California, show a just appreciation of the true basis on which rests our prosperity as a State. Being a resident of Stanislaus, after giving a rather unfavorable account of the crops in that location, he proceeds to make mention of the manufactures of

STOCKTON.

They build here in Stockton the best wagons, or as good as in any other country in the world, and a great many of them, from the size of a wheelbarrow up to those which carry twelve tons weight. At Mattison's Agricultural Depot you can see the home-made grain-reaper, without doubt the best in these United States; and also a large and well selected assortment of good plows and cultivators, of the latest improvement, equal to any in the older States. Windmills are thickly strewn over this beautiful city. We must not omit to notice the foundery of Messrs. Keep & Brigg, recently established here. Their reputation as good mechanics is a guarantee of the success of their enterprise.

AGRICULTURAL IMPLEMENTS IN SAN FRANCISCO.

From this point we took passage with our old friend, Capt. Clark, for the City of the Bay. Our time did not permit us to look into all the workshops of the city; our first impulses, however, were to those more immediately concerning us as farmers. We visited the shop of Messrs. H. Hewitt & Co. This company was formed, and the building erected, expressly for the manufacture of Willard's seed-sower and harrower. Dr. H. Hewitt is the owner of the patent right for these machines for California and Oregon. We had seen notices of its successful trials at Oakland and Napa, and read the certificates attesting its complete adaptation to the wants of the California farmer, from men we had no reason to doubt; and yet an inspection of the machine gave me a still higher impression of its value. It is surely destined to supersede hand broadcast sowing, as well as the old harrow, for both operations are more perfectly performed, and at a vast saving of time and cost. It is the greatest improvement in these primary agricultural processes that has been made for centuries. Let farmers see for themselves; it will pay them for their trouble. We then went to the Pacific Foundery of Goddard & Co. Here one can soon learn that some machinery is used in California, and not a few quartz mills. This is a splendid establishment, where there are some seventy or eighty men employed, and work is done on short notice We also looked over the box manufactory of Hobbs, Gilmore & Co. This concern gives constant employment to twenty-five men, and cuts up over a million feet of lumber per annum. Their machinery and arrangements are perfect for the rapid manufacture of these wares. One more draft on your patience, Mr. Editor, and I have done. Last, but not *least*, we visited the agricultural depot and plow factory of Thomas Ogg Shaw, where the farmer can get the very best plow in the State, in my opinion, and a little better than they are built in the older States. Mr. Shaw lives where his plows are *used*, and knows what the country wants, and is himself a practical mechanic. His plows are best calculated for deep plowing, and his manufacture embraces all sizes from the corn plow to the largest sized breaking-up plow. We are positive they are what we want, for we have used them ourselves; and if any doubt this, let them call at LaGrange, in Stanislaus county, and we will show them the best work they have ever seen in this State, and that with one of these plows. If you want a revolving horse-rake, or a subsoil plow, go to Shaw's; go there if you do not want either; go and see the best shop of the kind in the State, where your reapers and threshing machines can be repaired at a moment's notice. A foundery is connected with the shop, in constant work, and what you want in the agricultural line can be made for you on short time, if not on hand.

I may be thought enthusiastic, but I feel I am not saying too much when I assert that such workshops as Shaw's, and those beside, of which I have given you a feeble description, are the glory of California.

Farmers, let me expostulate with you. Cherish home manufactures. Let your means no longer go to swell the semi-monthly shipment to the East. Let us live within ourselves, and sever the dependence upon foreign States for what we have ample resources to produce ourselves. A home market for our own productions—home manufactures. Our calling and that of the manufacturer are of the same kindred; they are allied in principle; they *create* property by labor. If allied in principle, they have an identity of interest, and should mutually support and assist each other. When this compact or alliance is fully carried out, we shall see better times in California.

I. D. M.

THE GOOD THINGS OF LIFE—We mean eatables, of course, for half the world think only of eating and drinking. Fordham, Jennings & Co., by their large stock of *family and ranch groceries*, can offer all those needed articles of comfort and luxury so requisite for personal and family prosperity. Call on them, and you may be sure of being suited.

CROPS IN THE NORTH.—We learn from a gentleman who has been spending some time in Scott Valley, that the crops never looked more promising in that valley. Farmers are talking of wheat being down to fifty cents a bushel —[Yreka Union.

Breeding Stock.

The following excellent article on the breeding of stock, we clip from an English paper:

A correspondent has inquired what description of horse I should recommend him to breed as being likely to pay the best. It must be quite apparent to every one, that to fulfill his request in anything like the usual space of an answer to correspondents, would be impossible. I am compelled, therefore, to make it the subject of an article.

I cannot have the smallest hesitation in giving my correspondent a categorical answer to his question, as to the kind of stock that will pay the best—*racing stock*.

I have thus answered the query put in straightforward terms; but it must be borne in mind that I have only answered it in general terms, as relates to men having the knowledge, the convenience, and the means to produce that which, I hold (having all these), will best answer their purpose. I have said what I believe to be the fact, that blood stock pays the breeder the best. In breeding, if a certain dam is put with judgment to a certain sire, is then properly fed and sheltered, and so placed that no accident is likely to occur, barring the customary proper attention, she is no further trouble for many months to come; a watchfulness is requisite about the time she is expected to foal, perhaps (but not often) some little assistance also; but the foal born, and a few days old, he and his dam require but the common attention of being supplied with food and water.

Now comes the outlay to procure sires and mares; this I grant, must be somewhat heavy. though it is true there are dozens, nay, scores, of thorough-bred mares to be purchased quite as cheap as common ones; yet who would purchase their progeny? Mares must either have proved themselves runners, or, what is perhaps just as good, be descended from running blood; the sire the same. There are many mares who could never run forward themselves, yet with a proper sire, have produced stock that could comparatively *all* run. Let a mare, though never worth a man's but as a racer herself, if of fashionable blood, produce a colt that it is found can run; from that time she is a comparative fortune, or, at all events, a real good income to her owner.

I have used the term sires in lieu of sire as a very prominent feature in the items as regards outlay; it may be said that a man purchasing (say) a dozen brood-mares, has no occasion for more than one sire, nor would he have if his stock of mares were three times the number, so far as the mere propagation of animals is concerned; but it must strike every one that it is next to an impossibility to collect together a number of mares, all possessing similar attributes; some may have been flyers, others of a sort and breed that, in technical terms "could run all night." Thus it must be quite clear that the same sire would not be a proper one for mares of such different qualities. The flyers must have a strain of such blood as Whalebone (for instance) got into their progeny, while the honest "Stayers" would want some of the Velocipede or such blood, for theirs. Even with the most judicious crosses of this kind, excellence is not always to be arrived at; but without good sires, good mares, and good judgment after they are got, to gain it is quite hopeless.

We will say a man gives a couple of thousand guineas or more for two sires. Now he need not lay the loss of the interest of £2000 to his breeding expenses, his sires may very properly be placed to the profit side of the book, for, independent of their services at home, may be reckoned the mares of other persons sent to them; so that, beyond his services to his owner, a very moderate horse will bring in, say, a hundred or a hundred and fifty in the course of the season.

I hardly know a pleasanter mode of turning his money to good account, and occupying a portion of the time of a country gentleman, than breeding stock of any sort—*what sort* must be determined by the breeder's taste, and, as I have before said, by the different proper appliances and facilities he has for breeding. *All* breeding is profitable, if properly and liberally carried out. I say liberal, for, whether a man breeds thorough-bred or cart stock, oxen or sheep, without a liberal system is adopted, neither will answer.

There is one vast advantage in breeding race-horses—this is, the very early age at which they can be sold. When we consider that from breeding establishments colts are all but invariably bought as yearlings, and those, if in favor with the sporting world, fetching (perhaps) colts, a hundred guineas, fillies seventy, it will be seen no domestic living animal will fetch the like price at so early an age. It is true a cart colt may only cost (so far as relates to his sire) a guinea or two—a racing colt will cost at all events ten or more, unless a sire or sires are kept; but against this we have to keep and feed the cart colt for three years, and then we are fortunate if he turns out worth fifty.

I have said, a few lines back, "if in favor with the sporting world," as allusive to the character of the thorough-bred stock. This favorable estimation is only to be gained by three different modes. First, getting blood, on both sides, that is in favor with the racing public; secondly, it being known that they and their dams are liberally and judiciously fed and managed; and, thirdly, letting it be publicly known that *never, under any circumstances*, is one of them tried, or kept back for the owner's use. If I bred, I would most implicitly keep faith with the public in this respect, and I beg respectfully to recommend all others to do the same. Of course, I mean in cases when a man breeds to *sell*. Breeding race-horses for an owner's use to run is quite a different affair, and one I need not touch upon in merely answering my correspondent's inquiry.

We will suppose that, among a dozen yearlings, a breeder bred, from the opportunities he has of observation, he has one that has every promising attribute a yearling could have, as prognosticating his coming out a race-horse—size, temper, constitution, soundness, and style of going. I grant the temptation is great to keep such a colt back; do this once only, and your *prestige* as a breeder and seller of untried stock is gone. In such a case as the one I have alluded to, it would be quite incompatible with keeping his faith with the public, if, at his annual public sale, he gave a friend the benefit of his opinion as regarded a particular colt among them; they are open to public competition, and if that friend chooses to outbid the public, nothing can be said against his right to do so.

I believe it will be found in most things, as was as breeding blood-stock, if a man keeps his faith with the public, that public will hold their faith in him; and if a man depends on public opinion for the value of anything he has to sell, he must be very weak indeed if he risks losing its confidence for any flattering advantage, which, after all, may turn out a failure. Stick to the breeding *only*, and (in vulgar phrase) its profits will stick to you.

A Curious Freak of Nature.—We have received a letter of interest, says the Scientific American, from Newark, Ohio, which informs that there is a white oak tree of fine healthy growth, standing near Robinson's Coal Oil Works, in Perry county, on which, at fifty-five feet from the ground, is ingrafted a black oak top of lofty and vigorous growth. It is about two feet in diameter at the usual hight of cutting trees, and the body stock is fourteen inches at the grafting portion, and the black oak immediately above it at once enlarges to twenty-two inches. The grafting is represented as being of the most perfect description, and there is no appearance of deterioration in either the white or black oak portions. There are several limbs below the union, and those above are said to be equal to any tree of the same description in that section of the country, and would form a luxuriant and proper superstructure for a stock three feet in diameter. The only reasonable supposition for this curious growth is, that the white oak portion was broken by the falling of a black oak tree near it, and that a branch of the latter must have been so driven into the fracture as to unite and grow in a firm manner to produce the singular phenomenon above related.

To Sportsmen.—S. Sutherland, of Richmond, Va., gives to the Scientific American, the following rule to load a gun properly: Try it repeatedly with charges, consisting of equal bulks of powder and shot, till you come to a quantity with which the gun will not recoil, or but slightly; this will give you the proper quantity of shot. With this load, however, the gun will scatter in all directions. To correct this, reduce the quantity of powder until you find that the shot is carried as close as you desire. A gun loaded thus, will never burst. To make it carry further, use shot of a larger size. No gun should be fired more than twenty times without being wiped out. When in the field, it will be much safer to carry the piece always at half-cock.

Horses' Coats.—Lately going to the country to spend a few weeks with a friend of mine, I drove a very handsome horse, and a good 'un—but was always annoyed about his coat, as it was more like a lot of bristles than a horse's smooth skin, and all the grooming he could get "wouldn't do it no good." My friend, who is a great horse breeder and fancier, made me try giving him a few carrots every day out of my hand, saying that he would have a good smooth coat in three weeks—and he was right, for in that time my horse had a beautiful, sleek, glossy coat, and all from eating a few carrots daily. He tells me it is infallible.—[Porter's Spirit.

Cure for "Yedra," or the Poison Oak.—Be it known to all afflicted with this disagreeable malady, contracted by coming in contact with the poison oak, or as it is commonly called in this country, "Yedra," that sulphate of copper is an infallible remedy for the same. Make a strong solution of the blue-stone, and wash once or twice therewith; the itching ceases almost immediately, and the irruption dries up and disappears.—[Ex.

Starch from Horse-chestnuts.—This fruit contains a great quantity of starch, and as the tree will grow almost anywhere, it would be advisable to apply the hitherto useless fruit to a valuable purpose. The tree is one of the most beautiful, and might well be planted along our streets and roads.

The President is negotiating with Gen. Hiram Wallbridge, for the use of his beautiful villa of Ingleside, about a mile from Washington, during the hot season. The point of difference between the landlord and the President is a singular one: Gen. Wallbridge objects to the receipt of rent, while Mr. Buchanan positively and properly objects to taking the property unless at a fair yearly rent. The correct views of the President will doubtless prevail.

A retired baker, whose dough has nearly run out, and who feels that his practices in this world entitle him to a warm berth in the sulphureous oven in the next, would strive to make amends for his past life, and purposes to do so by telling his brother kneaders of the dough of prosperity, how they can grow rich without reducing their loaves to the size of walnuts, and the puffing them up to the dimensions of cocoa-nuts by means of saleratus and other inflating devices. Make large bread, and let it be of good, sweet flour, and your customers will increase and multiply so rapidly that you will get your merited reward in the smiles of fortune and the *approbation of your fellow-men*. Try the advice of a retired baker, and, his word for it, you will decide that it is "as good as wheat."

A Model Firm.—It is said that Messrs. Gales & Seaton, of the National Intelligencer, Washington, D. C., partners for forty-five years in the publishing business, never had a difference of opinion on political questions, and never a jar or misunderstanding of any sort. They have never known a division of interest; from their common coffers each has always drawn whatever he chose, and for more than thirty years past, there has never been a settlement of accounts between them.

It has been discovered by a Frenchman that immediately after death a murmuring sound is heard in the body, lasting five, ten, and even fifteen minutes, diminishing gradually, and ceasing first in the parts of the body farthest from the heart.

"Why don't you limit yourself?" said a physician to an intemperate person; "set down a stake that you will go so far and no further." "So I do," said the toper, "but I set it so far off that I always get drunk before I get to it."

MY HARP AND I ARE FAITHFUL FRIENDS.

BY SAMUEL CAMERON.

My harp and I are faithful friends: we've loved each other long;
And many a time, in many a wound, we've poured the balm of song;
We've rested by the forest stream, beneath the willow tree,
And told to heaven, in song, those griefs which heaven alone could see.

And when the sun was going down, in gold and purple dressed,
We've journeyed to the topmost hill, to see him in the west;
And 'twas a joyous sight to us, to see him pass away,
And with him bear the glorious light of our congenial day.

Then came the gentle breezes round, like spirits from above,
Their wings were rich with fragrance, their breath was that of love.
They brought us holy memories of friends departed long,
And gave alike to harp and hard those richest themes of song.

And hence we love the evening hour, my mournful harp and I,
When the dews are on the valley leaf, and the stars are in the sky
So sing we on, so sing we on, by stream and shady bower,
The melancholy charm that comes with evening's dewy hour.

A Letter from Steamer—off Acapulco.

BY A PASSENGER.

Courteous Reader: Here we are, you and myself, about to take a trip to the Atlantic States, you in prospective, I in reality; but for association sake I consider you at my side and here we go. Let me see. Yes, that's right—I had almost forgotten, and have to come to a full period as I fix positively upon the starting point. Montgomery street is a very fashionable portion of the Bay City, and of course we are fashionable creatures (though if you are feminine I hope you don't pile on the crinoline *very* much), consequently we make our starting point from that locality, and wend our way on to Stevenson street, to our private boarding-house. Here we find our luggage in readiness, having packed it last night. Taking our blankets in one hand, and running the walking-stick we cut at Lone Mountain through the handle of our valise, we shoulder it and are off for Folsom-street wharf. Arrived here at 8 o'clock A.M. Ship will sail at 9. But little time to talk with any one, and we must stick together, and not stand upon the wharf, for the Golden Age is a fast ship, and waits for no one. Well, here we are aboard. Second cabin passage. Not being blessed with a wife, do not require a stateroom, and find our berth, "eighty-three," to be very comfortable, and, on the *average*, second cabin nearly equal to first. We deposit our valise and blankets on "eighty-three," to give warning against intruders. Being neither a fop or maimed in person, hardly know what to do with walking-stick. Still we must take *good* care of it, for it is intended for one of "the old folks at home," who is old and needs support to his frame. He will cherish it highly as coming from "The Coast Range," but most of all as an evidence that we remembered him with affection when far away. Consequently we keep it in our hands at the risk of being called a fop, or asked if we "have been bodily injured up in the mines?" Now then, up we go, from second cabin to "main saloon" (walking stick helps us) and take our station near the gangway. Some friends of ours are coming from the city, to bless us, and bid us God-speed upon the journey. So we make a *stand* of our position, grasp the stick, put ourself upon the defensive, and are determined not to be moved from this locality. Did you hear that remark? Certainly, and the rejoinder also. A gentleman presumes we belong to the army, and wishes to be introduced; while his companion assures him we know nothing of sword exercise, that the attitude is accidental, though he grants we have possession of a *single stick*, that we exercise it constantly, and presumes we acquired the accomplishment near "the Cove o' Cork." Never mind them now, keep your eye on the gangway. Whew! what a jam. All kinds, colors and sizes crowding, jamming, jumping, and *throwing* themselves aboard. Steady now, here comes a lady; can she *ever* get through the gangway! Think not; for that only measures five feet two inches, and I'll be sworn the diameter of her lower hoop is every inch of six feet four. She is considering the dilemma, and wishes to know "if there is no upper plank?" Ah! here comes her waiting-maid. She appreciates the condition of her mistress, and devises a remedy. See, she stoops, modestly raises the lower hoop (red flannel petticoat) until it takes the hypothenuse, of the gangway, and, glory be to God, the lady's aboard. "Hurrah for hard times." What's that? "Hurrah for hard times. I'm a *miner*, *I* am." Oh yes! there he is; don't you see him, on the plank, with a gray shirt over a white one and a small battery of Colt's invention attached to his belt. Here he comes, happy as a lord—probably took a little otard on the wharf. Never mind, he's all right, and we are proud of him because he acknowledges his brotherhood to us. Ah, here comes our young friend. Aye there! Here we are; I say, come here—oh, Heaven bless us, he's mixed up with the crowd, and we must go after him. Lucky thought: cut right and left, and thrust walking-stick, clears the way. "Good morning. Can't stay but a moment. Came down to say good-by, and here you have it. God bless you and prosper you. Wish I was going with you; but cannot leave my *duty*. Good-by." He's off; our blessing goes with him. Long may he wave, not in doubt or hesitancy, but in righteousness, rectitude, prosperity and advancement. Heigh-ho, what a jam, and *such* a crowd. * * * * But who is this, working his way so rapidly and quietly through all this bustle and confusion. We recognize him instantly. See he has any quantity of literary publications with him, and is making his way to the rooms of the mail agent. There he is opposite us. We must *speak* with him. I say! hold on; come here!

Ah, he sees us; looks as though he had been aware of our position since we came aboard; keeps moving, and is going on without a—oh, no, he answers us now. See, he raises his hand in token of our salutation; simply says, "stand where you are," and is out of sight. How quietly he spoke, yet, with so much firmness, that we dare not move. Wonder if he will forget us? It is nearly nine, and the ship will sail at that hour. He must be quick. Ah! here is. "How are you now? Anything we can do for you this side?" (Generous man, he has cast "bread upon the waters" for us, unhesitatingly, already; he thinks not of what he *has* done, but of the good he *may* do.) "No? well here are some Farmers for you, and here's [as friendly a hand, and as *true*, as ever we grasped] good bye, and God bless you." He's gone. See, there he goes, away on the wharf already; how *does* he get along so fast? and, bless the man, he makes no noise whatever. There, he takes a cab, makes a motion, and is off like the wind. Heaven send prosperity to him, and grant that (we quote from his contributor Edith) "power shall be to him like a river, and righteousness as waves of the sea." Well, now let us go down and see about our valise! how is this? Steward explains it all, by proclaiming, "Gentlemen will please remain as they are, for a few moments," and we find all passages of escape from our present position guarded. Hallo, we have left the wharf. Wonder who this is coming toward us? Seems to be acquainted with us. Good morn—"Tickets, sir, let me see your tickets." (Walking-stick comes down with a crash. Man looks a little frightened, but still says, "Tickets, *if you please*".) "Second cabin, berth 83; all right, sir." "Yours if you please, sir." (Man is after the miner now.) "Steerage; all right, but you must go forward. You are in the right church, but the wrong pew." "Oh yes, I see how it is. I am in the wrong lead. Struck a pocket, but can't work it, unless I pay more for water than the claim is worth. Like to stay here; *surface looks* well; but I go more on deep diggings than shallow. So, show us your steerage, and hurrah, for hard times." Hark, what's that? bang, bang; oh, that's a salute from the Revenue Cutter. We are moving past her. Whew! that was an awful one. Must be heavy metal from the report. Oh, ho, do you hear the miner? "Go it again, old fellow. Wake 'em up. You've got Uncle Sam's handkerchief hitched to you, and when he *wants* a man to fire his guns, let me know, and I'll be there." "Hurrah, there, all you that are going ashore in the pilot-boat; all aboard! all ashore!" "Draw up the ladder." "Close the gangway." There goes the ship's gun. We are off. Let us go out on deck. Here we are, on the larboard quarter. Look! see the crowds upon the wharves. What a waving of handkerchiefs and tossing of hats! Listen! they are shouting, they cheer us. God bless them! "Hurrah!" "May the voyage be propitious!" We have passed Jackson street wharf. The shout of the multitude grows fainter. There goes our second gun. Here's North Beach; yonder's The Gate—ha, ha, we're off * * * * And now we stand uncovered (walking-stick serves us to lean upon) as we remember Bessie, and her parting words. We *act* upon their import, and pray God's blessing to rest with us; that we may leave all that is evil in its tendency behind us and carry nothing with us but the purest and best of motives. We render Him thanks for His many mercies, and intreat Him to watch over those we leave behind us, whom we have cause to love so dearly. We realize that we are but passing creatures, from this world to eternity (walking-stick slips, and reminds us we are passing out of the Gate. Unsophisticated youth asks, if we are "on big pond yet?") and must take heed to our future welfare (and many times to other people's importunities). Well, here we are at sea, and, from the association of ideas, find ourselves singing,

"The sea! the sea! the open sea!"

while we gaze landward. And now we observe the outlines of the coast growing fainter, and less discernible, as we are borne away upon the bosom of this endless sea. We may never see this goodly land again, and even now it grows dim to vision. Farewell, ye noble hills, and verdant fields. We tarried with you long, and leave you with reluctance. Farewell, the country we came to in its youth, and leave in its manhood. May thy future be as bright as thy destiny is to be great. Thy experience is youthful; still thy advancement has been rapid. Excelsior, to thee, in coming time. California, fare thee well * * * Hallo, here—what's all this about. Oh, yes, exactly. We are at sea with a fresh wind. Ship pitches, and all, who do not settle, *cast up* their accounts. Seems to be many of the *casting* denomination. Hold on; here's fun. Here comes unsophisticated youth: "I say—oh, dear—mister—ugh—hold—oh Lord—my hat while I—b-a-h w-o-o-ph—oh, I wish I was—a-u-p—oh, my—oh Lord (walking-stick soliloquizes):

"Go in little one, go in and win. *That's* the talk, go it again, king and another one, got you in the door *this* time, and you can't *bar* the port no how." Hark! yes that's the dinner gong, and as we feel "the demands of appetite," we will dine. (Walking-stick presents hat to unsophisticated and desires to know if he is not inclined to dine.) "Eh! what, dinner? ugh, oh don't, *don't* say dinner to me, waugh." Ah walking-stick, thou hast committed an unpardonable error; thou hast made a positive blunder, and met with rebuke in thy young existence; but come, we will dine, and then thou shalt be properly spanked and put to bed. We find ourselves at dinner beside an "enterprising individual," who "pitches in" without regard to courses; asks us to pass "that are dish, that are plate," and "shove along the tall thing with the fixings in." We do not comprehend *quite* all the request, and hesitate. (Walking-stick suggests he wants the mustard, and we profit by the hint.) "That's it; that's the very truck I want; *you sabie*." Ah walking-stick, thou art redeeming thyself; thou shalt go to bed for thou mayest be weary, but whipped thou shalt never be.

Dinner over, we descend stairs to "eighty-three," find valise and blankets all right, and as promised, put walking-stick to bed. Looking about us we find that many of our fellow passengers are sick, and altogether this is not a pleasant place at present; so we go up and out on deck, to gaze upon the mighty waters. The wind has freshened, all sails are set, and we are rapidly leaving the golden El Dorado behind us. And now we look seaward, and gaze with reverence and awe upon the endless billows of the wide Pacific. How the "white-caps" roll. Ha! ha! they go laughing and sporting in their strength, lashing, twisting, rising and sinking, foaming, never ceasing. Look! see—away in the horizon—do you see; it goes heavenwards, and belongs—ah no; the billow returns to its mates, and though the crest sprang through the clouds and went laughing to kiss the heavens beyond, yet all has returned to its ancient bed, to revisit the clouds and go sporting with the winds. Heigh ho! what's all this—hold hard—there it's over now. We have shipped a sea, and ha! ha! ho! ho! *do* you see unsophisticated youth. Oh, ho! look at him; aye look at him *now*. The sea struck him and washed him into the tub. There, he has gone below, poor fellow, wet to the skin, and we laughing. Well, we *must* laugh, if we die for it. Here comes another! see, it's after us—it chases us—it's over us—hold fast. See the crest, how it foams; ha! ha! it rises *high* upon the billow, breaks, dashes, and now it mingles with its parent fountain. As we gaze upon these never-ending waters, we realize that "the sea is His and He made it," though we are possessed with but a glimmering of the greatness, glory, and power of "Him who holdeth them in His hand." And so we pass the time, holding beautiful thoughts and sacred meditations, resolving upon living to some purpose, and reflecting how little we appreciate the loving kindness and tender mercy of "Him who sitteth eternal in the heavens."

There goes the gong, and our reverie is ended. We take supper, then our quarters beside walking-stick, and sleep soundly. Rise in the morning, find it cool and pleasant, though the sea is still running high, and the ship rolls heavily. We are not sea-sick—never were so. We take breakfast with a relish at half past six, dinner comes on at one, and supper at a quarter past six. First-cabin passengers breakfast at nine, dine at half past three, and lunch at nine in the evening. Steerage passengers have three meals a day, and eat alternately, according to number. We have about eight hundred passengers; four hundred and seventy-five in the steerage, the balance in the cabins. Find all of them in better spirits and more conversable than they were yesterday, though many are still seasick (unsophisticated youth among the number).

At twelve o'clock an observation is taken, and we find we have been making something over twelve knots an hour since leaving the Bay City, having run a distance of two hundred and ninety-one miles. Wind still holds fresh and sea runs high. Hark! what's that bell for? "Second-cabin passengers, please step to the Purser's room and get the table tickets." Well, here we are, number thirty-two. Now let us go and find it. Here we have it, at the forward end of the starboard table; just out of the way of everything; caster, salt-cellar, &c., entirely out of reach. Wonder who will have thirty-four, and if they will be accommodating. Will know presently, for here goes the gong.

We are seated and have finished "*a hasty plate of soup*," when somebody touches us upon the shoulder, and says, "please rise for a moment, sir, to oblige a lady." "A *thousand* times my christian friend," and God be merciful to us if there is not a lady come, and has seated herself at thirty-four. * * * * * Dinner's over; hazel eyes, chestnut curls, ain't over twenty-five, pearly teeth; goes to Maine, and is a widow. Hurrah for pine timber and the Kennebec river. * * It is evening; wind has gone down and the sea is becoming calm. We are walking the quarter-deck, and have since supper, in the faint hope of being joined by *some one* who might possibly give us some light and knowledge relative to one of the States "away down East." But it is "past ten o'clock," and we must retire, for our anxieties have this day increased. We have "bounded" the State of Maine many times, have ascertained it to be "eight hours' run from Boston;" have examined its statistical reports and studied its geographical outline until we "have more *matter* than the brain can digest." So we roll in to "eighty-three," with the reflection that "this ends our second day at sea;" and as we yield to the solicitations of morpheus, find our thoughts to be about breakfast, and wondering if "thirty-four" will be up.

"I say, you man what carries the big stick, get up." Oh dear, *oh* dear, won't nobody do it?" Hallo, hallo, what's the matter? Ah! (Unsophisticated youth is shaking us.) "Matter! *You* ask *me* what's the matter; get up, I tell you, and go after the doctor. Oh I'm nearly dead; oh dear, I shall go blind, I'm sure; and I'm poisoned, I *know* I'm poisoned." Oh no, I guess not; tell us what the matter is, and we'll cure you. "Somebody's poisoned the water; I tell you they want to kill us all. I tried it, I washed my hands in it; 'twas nasty, greasy, sticky. Then I went to another barrel and drank some; tasted like it came off a barrel of pork. Then I washed my face in it, and it a'most put my eyes out." Oh ho, is that all? "*That all!* that's *enough!* You're a *fool!*!" Well, never mind, little one, you'll be all right directly. I must go to breakfast now, and if you ain't better then, why—— "Stop your noise; don't you *speak* to *me*. You ain't got no human *feeling*, nohow; you are a heathenish good-for-nothing dog-on—" "Good morning, little one, there goes the gong, and"— Here we are, breakfast over, and "thirty-four" has not yet appeared. We must watch the children's table, perhaps she is interested that way. Meantime we will take a walk over the ship. Let us look into the steerage; how large, roomy and comfortable it is, and how cleanly it is kept; everything scrubbed up "ship-shape and Bristol fashion." Well this is nothing strange, for the ship is daily washed, and cleaned from "truck to keel." At eleven o'clock comes "inspection." The officers visit every portion of the ship at this hour, and whatever is wrong must be immediately rectified. The best of discipline exists throughout the vessel, and all goes on smoothly and well. The officers are very quiet, gentlemanly men, and are apparently perfectly competent to fill the various responsible situations which they hold; at all events they have our perfect confidence in their abilities, which we apprehend is very essential to passengers on a voyage at sea. Find the steerage passengers well satisfied with the accommodations aboard, and in both cabin and steerage but a small portion of the *growling* we anticipated. However, we are by no means *entirely* destitute of that class of individuals, for we find in every community a certain few, who, if they could not *growl* and find fault, would come to a premature death. We have beautiful weather; the wind has gone down, and the sea is like a mirror. This day's "observation" shows us we have made the distance of two hundred and seventy miles during the past twenty-four hours. A great variety of amusements are prevalent among the passengers. Many are playing at cards, and we notice a variety of games; some are engaged at euchre, whist, and crib; while others indulge in "seven-up" and forty-fives. Many are reading, and we observe more of those "yellow-covered abominations" than we care to see. Still we find many valuable works aboard, among them a book called "California and its Resources," which we advise you to purchase the first opportunity. It is but just issued, and the author is Mr. Ernest Seyd. Our variety of life is limited; we have the same routine of eating, sleeping, etc., daily. The excitement attendant upon getting started on our journey is over, and life at sea in this calm weather is becoming monotonous.

So we bring the third day's adventure to a focus, and find on the fourth, we have made Lower California, having run two hundred and sixty miles since our previous "observation." Passengers all well; weather cool, and delightfully pleasant. On the fifth day out, met the steamer Sonora, in latitude 23° 40' north. Saw whales seaward. Distance run two hundred and sixty-one miles. Passed Cape St. Lucas and entered the Gulf of California, at eight o'clock, P.M. On Sunday attended Divine Service, which was held on the upper deck; had an able discourse, and some very fine singing. Observed "the day" was religiously kept by all; no card playing allowed. Found our latitude to be 21° 5 north, longitude 107° 31 west; distance run, two hundred and fifty-one miles.

Monday, 26th inst., "made land" at seven o'clock, and entered the port of Manzanillo at eleven. Took aboard seven boxes of specie, and immediately "put to sea." This day's latitude 18° 59, longitude 104° 27; distance made two hundred and sixteen miles. And now my "courteous reader," we are on the eighth day, and are near Acapulco. Our voyage so far has been all that we could wish, and perfectly satisfactory to all. There has not been as much evidence as a "warm argument" towards a rupture or disagreement between any of the passengers since our departure; but the utmost urbanity and good feeling prevails throughout the ship. We are very much pleased at this state of things, for it speaks well for Californians. If you have any idea of visiting the Eastern States, and wish for a "happy time," by all means make your arrangements consistent with the departure of the Golden Age. A more gentlemanly set of officers cannot be found than those who have charge of this vessel, and whatever may be said of the P. M. S. S. Company as a monopoly, we must say their agents upon this ship are all that travelers can desire.

* * We have watched the "children's table" with much anxiety; suffice it to say that "thereby hangs a tale," and accounts for our not keeping the "courteous reader" beside us more constantly.

In our next we will give you an account of "progress made" more particularly, though we propose to drop the present tense and plural number, and in all probability you will receive nothing but my simple *narrative* (walking-stick hopes you are not feminine). So for the present, *Adios*,

Hydraulic.

State Agricultural Society's PREMIUM LIST

AND

RULES FOR THE

ANNUAL FAIR

AT

MARYSVILLE,

August 23d, 24th, 25th, 26th, 27th and 28th, 1858.

I.
Farms, Orchards, and Vineyards.

COMPETITORS in this department must, in order to insure the attention of the Visiting Committee, give notice of their intention, and make the proper entry, at the Office of the Society, before the first of June. This being done, the Committee will spare no pains to make the *time* of their examination accord with the wishes of those competing.

Grain Farms will be arranged in three classes, according to the number of acres each may contain. Circulars, containing full particulars pertaining to entry will be forwarded to all applicants for the same.

Address O. C. WHEELER, Corresponding Secretary, State Agricultural Society, corner of Sixth and J streets, Sacramento.

Discretionary Premiums will be awarded by the Society on articles or animals which they shall deem highly meritorious, although they may not be named in the list of Premiums.

Each Committee is authorized to *recommend*, but not to award, Special Premiums upon objects which properly belong to the class assigned to it.

The Judges appointed will, in every instance, *withhold Premiums on animals or articles that, in their opinion, are not worthy, though there be no competition*; and no stock of inferior quality will be admitted within the ground.

The Managers of the Society will be present during the Fair, to give all general directions, and forage will be furnished gratis for animals entered for premiums.

Abbreviations used in this Schedule.—GM, Gold Medal; SM, Silver Medal; FD, Framed Diploma; D, Diploma; Pl, Plate; B, Book.

BEST IMPROVED, CULTIVATED AND FURNISHED GRAIN FARM.

X.
Agricultural Implements.

All manufactured articles and implements must be entered and placed on exhibition before the 22d day of August, and remain until the close of the Fair.

No Premiums will be awarded for manufactured articles not produced in California, yet the Society will be happy to place such articles on exhibition with the names of the importers or exhibitors.

CATTLE SHOW.

The Cattle Show will be held in the City of Marysville, very near the Fair Grounds.

Competitors are required to forward to the Office a list of the animals intended to be exhibited, on or before the 10th day of August, in order that proper stalls may be provided.

Stock must be on the ground before 10 A.M. of August 23d, when proper places will be assigned them; and no animal will be permitted to leave the stall between 10 A.M. and 4 P.M. on any day of exhibition. A want of compliance with any part of this rule, will forfeit all claim to a premium.

The Regulations to be made by the Judges.

The Executive Committee have availed themselves of the experience of their predecessors, and of the best information within their reach, and yet the foregoing Schedule is, perhaps, imperfect. It has been found impracticable to maintain what many will regard as a just *proportion* in the arrangement of the Premiums. In explanation of what otherwise might seem an absurdity, it should be understood that there are to be three sizes of Medals—both of the Gold and of the Silver. The Gold Medals will be rated at $50, $30 and $20: the Silver at $15, $10 and $5.

Suggestions from persons of experience, especially in the department of *Mining*, will be thankfully received, and may still be adopted.

RULES,

For the Government of the California State Agricultural Society's Annual Fair at Marysville, 1858.

RULE I.—Each member of the California State Agricultural Society will be furnished with a badge of membership, upon payment of the membership fee of ten dollars, and will be expected to wear the same during the Fair, and which shall not be transferable. This badge will admit the ladies of his family, and children under fifteen years of age.

RULE II.—Price of single admission, to the Fair or Cattle Show, fifty cents. Single admission to both, one dollar. Season tickets, admitting a gentleman and lady to all the exercises at the Hall, and at the Show Ground, five dollars. Season tickets, admitting one person, as above, three dollars. Clergymen, editors, and delegates from Agricultural Societies, will be presented with a complimentary card of admission, on application at the Secretary's office.

RULE III.—Any person desiring to send articles or animals for exhibition at the State Fair, on producing a certificate of membership of the State Agricultural Society, for the present year, will receive a free pass for said articles or animals on any steamer belonging to the California Steam Navigation Company. Any such pass, having been countersigned by the President or Secretary of the Society, will entitle the bearer to return the articles or animals, enumerated therein, on the boats of the Steam Navigation Company, free of charge.

RULE IV.—All exhibitors, who intend to compete for the premiums of the Society, should become members of the same, and have their articles entered at the office in Marysville, at or before 10 o'clock A. M. on Monday, August 23d, without fail, so that they may be arranged in their respective departments, and in readiness for examination, by the Judges, on Tuesday, at 10 A. M.

RULE V.—The Society will not be responsible for the omission to exhibit any article or animal not entered strictly in accordance with its rules.

RULE VI.—No article or animal, entered for a premium, can be removed or taken away, without special permission, before the close of the exhibition. No premium will be paid on articles or animals removed in violation of this rule.

RULE VII.—All articles and animals, entered for exhibition, must have cards attached, with the number, as entered at the Secretary's desk; and exhibitors, in all cases, must obtain their cards previous to placing their articles or animals on the Fair grounds.

RULE VIII.—Those who wish to offer animals or articles for sale, during the Fair, must notify the Secretary of such intention at the time of entering.

RULE IX.—The Executive Committee will use every precaution in their power for the safe preservation of all articles and stock on exhibition. Exhibitors must give their attention to their articles or animals during the Fair, and at the close of the exhibition attend to their removal.

RULE X.—Judges will be selected with reference solely to the highest order of fitness, provided always that no person will be permitted to act as Judge in a department where he is a competitor.

RULE XI.—In no case can the Judges award special or discretionary premiums, but will recommend to the Executive Committee any articles in their class which they may deem worthy of special notice, and for which a premium has not been offered.

RULE XII.—The Judges on Animals will have regard to the symmetry, early maturing, thorough breeding, and characteristics of the breeds which they judge. They will make proper allowances for the age, feeding and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

RULE XIII.—No stock of inferior quality will be admitted within the grounds. A committee will be appointed to rule out all below a medium grade.

RULE XIV.—Animals, to which premiums have been awarded, must be paraded around the track, under the direction of the Marshal, that visitors may see the prize animals.

RULE XV.—No person will be allowed to interfere with the Judges during their adjudications.

RULE XVI.—The several Superintending Committees will give particular direction to all articles in their department, and see that all are arranged in the best order possible, to lessen and facilitate the labors of the Judges in their examinations.

RULE XVII.—The Superintendents will attend each set of Judges, in their respective departments, and point out the different articles or animals to be examined; will attach prize cards to the articles, or flags to the successful animals, after the reports of the Judges have been made up and delivered to the Chairman of the Executive Committee.

RULE XVIII.—The Judges will withhold premiums on animals or articles which, in their opinion, are not worthy.

RULE XIX.—The Chief Marshal, with efficient aids, will be in attendance during the hours of exhibition, to keep proper order.

RULE XX.—Animals, when duly entered, will be well provided for by the Society, without charge to the owner, and cannot be removed except by permission of the Executive Committee.

RULE XXI.—All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignees, to or for whom only premiums of such articles will be awarded.

RULE XXII.—Every machine or implement offered for a premium must be so designated or described as to identify it to future purchasers, and also the selling price of the article must be stated and marked on the labels and in the published report of premium articles.

RULE XXIII.—Efficiency, cheapness and durability will be regarded as chief excellencies in every machine or implement.

RULE XXIV.—All articles under the head of Mining Implements must be accompanied by a full description of the same; and all specimens under the head of Minerals, or Mineral Products, must be accompanied by a statement showing where and when procured, together with such other information as will tend to aid the Judges in making judicious awards.

RULE XXV.—The Chief Marshal will call the Judges at 10 o'clock on Tuesday morning, assemble them at the Secretary's rooms, furnish them with blank books, in which to register their awards, and have the Judges conducted, by the Assistant Marshals, to their respective departments of the Exhibition.

RULE XXVI.—The Marshal and his Aids will give daily and constant attention to the several departments, and see that each of the above rules is strictly enforced.

RULE XXVII.—All *regular* premiums will be announced and delivered to their respective claimants, with appropriate exercises, before the close of the Fair.

RULE XXVIII.—A suitable person will be chosen in each department to superintend the carrying out of the arrangements of the Executive Committee.

RULE XXIX.—Parties to whom premiums in money have been awarded, shall have the choice to receive the same in money, silver plate, or diplomas.

JOHN C. FALL, President

GEORGE H BEACH, Recording Sec'y.
O. C WHEELER, Corresponding Sec'y.

THESE Seeds have been well known in the Atlantic States for nearly three quarters of a century, a period of time almost reaching back to the days of the Revolution. From a small beginning the business has been gradually enlarged, to meet the growing wants of the country, until it has become an immense establishment, exceeding, in extent, any similar concern in Europe.

The demand near home, and orders of old customers abroad, have absorbed all the Seeds which it has been in the power of the proprietors to produce, and they are not *now* prepared to offer them to the *Trade* on the Pacific. The present card is, therefore, simply to announce the fact of increased effort on the part of the proprietors to grow greater quantities than heretofore, and THEIR EXPECTED ABILITY TO FILL ALL ORDERS FOR SEEDS OF CROP 1858.

The undersigned will be happy to open correspondence on the subject with Seed Merchants in California, &c, and will forward a copy of their Rural Register, *free of charge*, to all persons, whether dealers in, or consumers of seed, who may send their address by mail or otherwise.

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN
AND
NURSERY,

On the American River, 2½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE,

embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being CORRECT AS TO NAMES AND VARIETIES, are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

The California Farmer.

SAN FRANCISCO, FRIDAY, JUNE 4, 1858.

STEAMER EDITION.

Visiting Committee
OF
California State Agricultural Society.

THE VISITING COMMITTEE of the State Agricultural Society give notice that they intend to proceed on their Visiting Tour of the different portions of the State, for the purpose of examining Farms, Orchards, Nurseries, Vineyards, Gardens, Mining Operations, Quartz Mining and Machinery, and the various other Industrial operations of the State: That they will visit every section and locality that time and convenience will admit; and that as a matter of economy and saving to the Society they will hope to find all the facilities of passing from one farm to another offered them that is possible.

The Committee will endeavor to keep the public informed through the columns of the CALIFORNIA FARMER and the Marysville papers, of the routes to be taken in rotation, and the time of visiting the different localities.

About the 20th to 24th of this month, a portion of the Committee will leave Marysville *en route* northward—passing through the vicinity of San Juan, Forest City, Downieville, Monte Christo, and La Porte;

And will leave La Porte about 1st June, for Gibsonville, St. Louis, American Valley, Indian Valley; returning via Spanish Ranch, the Meadows, Buck's Ranch, Bidwell's Bar, and Oroville.

G. H. BEACH, Rec. Sec.

MARYSVILLE, May 7th, 1858. 18

CAUSE OF DELAY.—We sometimes are seriously troubled by the miscarriage of important letters, and our own prepared matter for the journal, when on our traveling tours, so much so as to detain our paper a day or more in its issue, and there are circumstances beyond our control, for which we know those friends who know our intense labors, will give to us a due sympathy. For the above reasons no paper was issued last week; but the paper for this week is issued in advance of the usual day of publication. As the numbers are regular, no inconvenience will arise.

The State Fair.

THE Premium List of the State Agricultural Society appears again in our columns, and we ask that it may receive the careful attention of all who are interested in its several departments. Will all who desire to promote this institution, remember that our columns are open for all discussion upon the subject of the State Fair. There may be many important suggestions that interested parties would desire to make, but refrain from it, because they know of no way by which they can come directly to it. Write to the FARMER, the Executive Committee will be most happy to have a widely extended interest awakened for the Fair, by means of such a discussion. There may be some inventions, some interests that are omitted in the Premium List; there may be some new thing suggested to the minds of many persons, or some plan that would add to the general interest; please lay it before the public through the columns of our journal, and we will aid.

We believe the Executive Committee desire to do all in their power to have this Fair excel all others, and if all the friends over the State will co-operate, it will be a good thing for the State. County Societies should now call meetings and lay plans with the Parent Society, and do all they can to aid. We call attention especially to the card of the Executive Committee, relative to their *tour over the State*. Let every town and county be ready to receive them and co-operate with them. Now is the harvest season, and we hope each grain-grower will be careful to save some sample *sheaves* of his grains for the State Fair, and also all important statistics for the general good.

Annual Address before the State Agricultural Society.

IT will be seen, by the following correspondence, that the Hon. Samuel B. Bell, has been selected to deliver the Oration before the State Agricultural Society, at Marysville, in August next:

INVITATION.

HON. S. B. BELL—Dear Sir: At a meeting of the Board of Managers of the California State Agricultural Society, held in this place this evening, I had the honor to suggest your name as a suitable person to deliver the Annual Address before this Society, at its next Annual Fair, to be held in this city, on the 23d to 28th of August next.

I now have the pleasure to tender to you the unanimous and earnest wish of the Board that you should perform such service.

An early and *affirmative* reply will greatly oblige, Yours, obediently,

O. C. WHEELER, Corres'g Sec.

P. S.—In replying, please address J. A. Paxton, Esq. (Treasurer of the Society), at Marysville.

REPLY.

J. A. PAXTON, ESQ.—My Dear Sir: I am greatly honored by the invitation extended to me by the Board of Managers of the California State Agricultural Society, through its Corresponding Secretary, the Rev. O. C. Wheeler.

In replying, it gives me the utmost gratification to say that (no adverse Providence preventing) I will deliver the Annual Address before the Society at its next Fair, to be held at Marysville, on the 23d-8th of August next.

It is with no little self-concern and distrust that I accept the elevated position, for I am not unconscious of the greatness of the theme of the occasion: for "*The profit of the earth is for all: the king himself is served by the field.*"

With distinguished consideration, I have the honor to be your, and the Society's most obliged servant, SAM. B. BELL.

OAKLAND, Alameda county, May 30, 1858.

IN the United States District Court, on Tuesday last, the claim of Milton S. Little, for five leagues of land in Yolo county, including the town of Washington, opposite Sacramento, was rejected. Judge Hoffman delivered an elaborate opinion in the case, covering about sixty pages of manuscript.

The Crops.

WERE the seasons ever so propitious, and were the crops ever so bounteous, there would be those who would be constantly complaining. It is nothing new to hear the cries of "drought," "crops lost," "great scarcity," etc. These complainings are very seldom uttered by those cultivators who carefully study the climate and seasons in which they labor, nor do we find such complaints to proceed from those who have wisely and judiciously prepared their lands, and who have planted the best seed, and performed their work in the appropriate time and season.

We have found, in many cases, these sad complainings to come from persons who rarely ever subsoil their lands, or who have never tried the summer fallow system; or they plowed shallow, or late, or both, and often from those who have, in a great measure, relied upon some *volunteer* crop. We know it has been said that, in many cases, the volunteer is the best crop. Let cultivators seek for the cause of this, each year, and they will soon learn important facts in relation to the cause of it.

We know, in many places, in several counties, when crops *are short* (and there is good cause for it), the same land has been planted, for *years*, with grain, until it has been so exhausted, by this crop, that, until some other product is raised upon the land, or it has been enriched, it will not yield as formerly. It is said that on the Puto side (Yolo county) they will lose their crops, all, except *one* fine piece of grain that was *overflowed*. On *this* field they will have a *wonderful yield*. What has done this? Was it not the rich deposit upon the surface soil over the grain? Nature has thus *restored the soil*, to teach a lesson! Shall we receive the lesson, and follow the instruction?

Mother earth has been lavish of her bounties in California, as all will testify; and she has been so, a while, because she knew that we were strangers to her kindness, and knew but little of her capacity, and that we were also entirely ignorant of the climate that surrounded her; but she has waited very patiently to see if we *would learn*; and now finding that there are so many who desire to "reap where they have not sown, and to "gather where they have not strewn," Nature rebukes them, and will not allow a harvest to those who hide their talents in a napkin.

What are we asking Nature to do for us in California. Is it not to give us a crop in winter? What is the *dry summer* in California, but Nature's *period of rest* for vegetation? Is it not the same, in its operation, as the *frozen earth* at the *north*? Shall Nature have no rest? True, man, in his incessant strife for gold, thinks not of this, but rushes on madly, and, without studying cause and effect, finds that, although the generous earth will give food to man when a hungered, there are *laws* that, sooner or later, must be regarded, or ruin would inevitably follow to all.

If the cultivator of the soil would ask of Nature, as a kindly boon, a rich harvest at that season when, by all her past history she has been accustomed to rest, let there be some return for this favor. And what shall that return be? We answer, let *art* become a co-worker with Nature. If, by our long summers, the surface-soil has had all its moisture absorbed, surely a *deeper cultivation*, for the roots of plants, will not only sustain the vegetation which we are growing, and which is not indigenous to our climate, but such cultivation will surely bring up to the surface-soil, by capillary attraction, an extra amount of moisture, sufficient for the extra crop grown upon it. Again, if by reason of the dry summer, the soil becomes so hardened that we cannot cultivate as finely as we desire, at once, then, surely, the soil should be prepared *in advance* of this dry season; and once *thoroughly* prepared, by a judicious system of summer fallow, we can go hand in hand with Nature; with Art and Nature combined, we can cheerfully look forward for success.

If the natural grains of California mature in April and May, why should not man conform to Nature's laws, and so prepare his land, and sow his seed, that the *natural time* for maturing grain shall be the *law* with him? If Nature selects the hillsides, for the grain-fields of California, why should not man take the hint and more thoroughly test Nature's laws? We have heard, it is true, of some experiments upon hillsides, but *what* experiments? Nature plants her *wild oats* in summer, and the seed rests in the soil till the rain comes, and then springs up and matures in *April*; but, in all the experiments we have seen, man planted in February, and *expected* to harvest in *July*. How wise! We venture the assertion now, that if the hillsides were prepared and left fallow one year, and then planted in summer, and the grain permitted to ripen *naturally*, we should have, upon such land, some of the finest crops ever raised.

We are rejoicing in hope of a better state of things; we can see here a little, and there a little of the better times coming. We see, here and there, a glimpse of a better understanding of Nature's laws, and, therefore, all are hopeful.

We ask all who are now complaining of short crops, and no crops at all, to go and make examination of the causes that have led, and do lead, to those complaints, and they will find, in *nine-tenths* of the cases, they result from a violation of those laws that govern the soil, season, and climate, and the neglect of a proper cultivation, such as should conform to them.

We ask of our farmers to please send us reports of the crops upon their *subsoiled land*, and summer fallowed, in contrast to those otherwise cultivated, and also their volunteer crop, and the time of planting, harvesting, etc., with quantities, weight, etc. For such favors we shall be grateful.

A telegram to the Bulletin, yesterday, announces the total destruction, on the night of the 2d inst., of the town of San Andreas by fire.

Fruit Season.

The San Francisco Fruit market begins to tell of the abundance of good things in store for the lovers of Fruits. Strawberries come into market now with a *rush*. Growers are sending in, from many gardens, from 200 to 1000 pounds per day, and strawberries that a few weeks ago were $1 50 per pound, are now but 25 and 37½ cents. The great growers of this delicious fruit are principally on the Oakland side. Messrs. Wolf & Latham are, we believe, the largest growers, bringing in enormous quantities, say 600, 800, and 1000 pounds per day. Large quantities come from Lee's family garden, and from the new garden (a portion of Wolf, Lusk & Co.'s) of Mr. Lusk. Palmer, of Alameda, and others on that side, and Gibbons and others at the Mission Dolores are sending in splendid fruit. Large quantities come up from San José and Santa Clara. This fruit, and the quantities brought to market, would astonish our Eastern friends. If they could see some of our *small* berries, say 6¼, 6¾, and 7 inches, they would say we were beginning to raise fruit. The style too in which it is brought to market, not in half-pint baskets or quart boxes, but in large square boxes, from twenty to forty pounds each, and sold by weight. California will beat the world in this fruit as well as in all others.

Cherries come into market now in most superb order, large, bright, and beautiful; we have never seen so large and fine. They are rather dear, only 50 cents per dozen, or $2 and $3 per pound; some $30 or $40 or $60 per bushel.

Gooseberries are destined to become very common; they come in now in bushels. Thompson's gardens, at Suscol, send in large quantities, and in fine order, and some lots very large. They will have the largest crop in the State.

Blackberries come in now more plentifully, and will soon be cheap, as well as all other fruit. Parents, guardians, and housekeepers can now afford fruit, for it is cheaper and more healthy than meats, and surely much better and more palatable, and should be eaten in the early part of the day.

That there will be an abundant harvest of peaches, figs, grapes, and all other fruits, we have no doubt; even much larger than ever before. Although some gardens may have little or none, the greatly extended number of gardens and orchards will secure this.

Agricultural Colleges.

WE had prepared an editorial upon the subject of Agricultural Colleges, to urge the attention of the friends to the matter, and to ask their co-operation over the whole Union, as this subject was before the present Congress, and to urge the necessity of memorializing Congress from every State; but as the good news comes to us by the last steamer of the passage of the bill in the popular branch, we would not doubt of its success in the Senate, and its sanction by the President.

Michigan was the first State to found an Agricultural College on the Atlantic. The great State of Ohio also provides a College, education *forever free*. Iowa, Wisconsin and Kentucky, are now nearly ready; their Legislatures and their Boards of Agriculture are at work. Maryland, too, has begun the great work, and established a College; and one State after another will soon have Colleges, where the sons of toil, the farmer, the mechanic, and the child of genius, shall find the halls of learning open—their doors wide—and bid them come and partake freely.

Congress has now performed a great and glorious duty, and Parent like, bestowed the gift upon each State, and each State now is called upon to take charge of that gift and carry on the goodly work to completion by a like bounty, sufficient to erect buildings and establish the College. This will surely be done if the *people* perform their duty. Memorialize!

There is a spirit abroad that cannot be checked. Progress! *progress!!* is the watchword; and soon there shall float upon the dome of many a fair temple, a banner bearing this motto: "*Free Education for the Sons of Toil.*"

To our Readers at Acapulco, and on the Steamer.

READER! you are now approaching the "Golden State," and we trust you come to make it your home; it may be you are an old Californian; then you know whither you are going, and we can tell you no news of her fertile soil, or her genial climate. But we can tell you that, "as you sow, so will you reap," and that if you are true to her "industrial interests," and do all you can to awaken them and sustain *home interests*, so will your own prosperity be. Will you be the *true friend* of these interests? Now, you have time for reflection, you are upon the sea—and so is California; and like a great ship, she is to be guided into a haven of prosperity by those who command her and pilot her. The people are or should be pilots all, and the people should command, for by their actions in their individual and collective capacities the fate of California is to be decided.

If her *industrial resources* are cherished, fostered and encouraged, California will prosper and become great among nations. If they are not, then alas! for her. Reader, will you aid in these great interests?

Are you a new comer? Then we present to you our genial clime, and our fertile soil. We will show you the fruits and flowers of our bright land when you shall touch our soil, their very fragrant breath shall greet you as you near our shores, and if you would be happy and prosperous, hie to the country; make your home there, and live. Read in our columns what nature is doing for those that reverence her and love her; but we will leave these columns for you to read and judge, and when you reach these shores, we ask that we may commune with you every week. We ask you to become the friend of our journal and the interest it pleads, and we will try to make it your friend and the family's friend.

County Fairs.

A very commendable spirit is abroad, in regard to the subject of County Fairs. It will be recollected that after the State Fair was held at San José, the citizens of that place held a County Fair the following year, which proved a most commendable one, and many of the contributions were afterwards shown at the State Fair, which added materially to that Exhibition.

Stockton too, the present year, will awake and show what the broad fields of the San Joaquin can do.

Napa is putting on the garments of preparation, and we think her prospects are to have a grand affair. Her Exhibition last year, got up suddenly, proved successful. She paid a very respectable list of premiums, had a nice social time, and had money left in the treasury for the new year. In our recent visit to Napa, we found the right spirit prevailing. Certainly the *banner grain county* can have a good County Fair, especially when they claim, and pretty justly too, some of the very best stock in the State.

Solano, with her broad bounds, comprises many fine orchards and grain fields, many fine stock farms, and much that is worthy of exhibition, and we hope she will not sit idly down, but arouse and show what Solano can do.

Suisun City contains a goodly lot of men of business who would be benefited, and the whole country would be the gainer.

Each and all these counties are blessed with a glorious share of the "fair sex," who are ever ready to work in so goodly a cause; and with such aids, and such a cause, we trust many will awake to the importance of holding County Fairs the present year.

Trip to Napa—Grain-Fields &c.

On our route from Benicia to Napa, although along the road there is little cultivation and but few grain-fields, yet what we saw were certainly very fine. We noticed many evidences of improvement along the road. A fine brick mansion of Mr. Fagan (firm of Toney & Fagan), 1000 acres of land inclosed, good orchard, and plenty of stock. We noticed also the excellent home and farm of Mr. Glassford, and his fine grain-fields, good as need be; his fine premium shepherd dog too; farm well fenced; good stone walls; some barley-fields, very heavy crop.

A brief ride, in and around Napa city, of some three or four miles, assures us that Napa Valley will show some tall crops this year; and it would not surprise us if they had to build another warehouse. We saw one fine field of wheat, belonging to Judge Hartshorn, with long heavy heads towering higher than the good five-board fence; this promises a very fine crop; and many others in and around Napa; and in fact we think Napa will have her best crop the present year. We shall speak from a more extended examination next week, and shall speak of some dairies that are hard to beat, and some orchards, and about Napa County Fair, &c.

Napa is surely prospering. New brick buildings have been reared, and the place bears a healthy look. Sales of green-house plants about every day show a love of these floral gems. Fine horses and cattle are on the increase. Some of the best stock in the country is owned in Napa—of this we shall speak.

The Revere House is now under the control of Gilmore, so long and favorably known as of the Napa Hotel, and Taylor is around, just as naturally at home as can be. The Revere is doing a fair business, and will be the head-quarters for travelers on the way to the Napa Springs, where at present about fifty visitors are making merry. The stores in Napa are doing a prosperous business. James & Co.; Goodman & Co.; McClure, Haile & Co., and others, have excellent stocks for their customers. The Napa Hotel is doing well. Brown's stables supply good teams for visitors to the springs, or a ride around Napa; and we can surely recommend denizens of the Bay City to try a trip to Napa and the springs; it will refresh them. More anon.

Victory Won—An Agricultural College in Every State.

CALIFORNIA can now have her Agricultural College. We are most truly rejoiced to make a record of the most glorious fact, that Congress has at last taken wise measures to secure to every State in the Union the means to establish a College for a liberal practical education of the industrial classes. We rejoice to herald such news, and we ask the attention of our readers, and of all who are interested in such an institution, to the following synopsis of the bill which has passed. It now remains with the working men of California, with the industrial, to see that the purposes of this grant are fulfilled. Let memorials from every county go up to the next legislature, for immediate action upon this grant, and never rest till the purposes of the bill are fulfilled. This bill will give to California 80,000 acres, equal to $100,000 at $1 25 per acre. Land could be selected that would bring much more upon sale.

On the 23d April the House took up and considered the bill donating lands to the several States for the benefit of agriculture and the mechanic arts.

The House refused to table the bill—84 against 109.

Mr. Cobb made a speech against the bill, which was passed by yeas 104, nays 101.

The bill grants 6,340,000 acres of land to be apportioned to each State in amounts equal to twenty thousand acres for each Senator and Representative in Congress, to which the States are now respectively entitled. The moneys derived from the sales are to be invested in United States or other stocks yielding not less than five per cent per annum, the moneys thus invested to constitute a perpetual fund, the interest of which shall be inviolably appropriated to the endowment, support and maintenance of at least one College in each State, where the leading objects shall be, without excluding other scientific or classical studies, to teach such branches of learning as are related to agriculture and the mechanic arts, in such manner as the Legislatures of the States may prescribe, in order to promote a liberal practical education of the industrial classes in the several pursuits and professions in life.

Among the conditions under which the grants are made, is one that the State shall provide not less than one College within five years.

EXPEDITIOUS TANNING.—Some samples of good harness leather were lately placed in the workshops of Napa, ready for use, in just *six weeks* from the day the hides were taken off the bullock. Is it not strange that in a country where this can be done, that the practice shall continue of sending hides to the East, pay the freight there, pay workmen there to *tan* them and work the leather up for us, and then pay the freight back; and after waiting about *two years* get work that can be done in *two months*, here. Where does the gold go to?

REVERE HOUSE,
NAPA CITY,
..BY..
F. B. GILMORE,

Nice Lumps.

California gold has run out, cries the croaker. Last week we were invited to look into the counting room of Messrs. Bull, Baker, & Co., on Front street, where several mercantile offices are held, and there we saw that *small lump* of forty-eight pounds of gold-bearing quartz. This is undoubtedly one of the finest specimens of quartz yet found; a heavy bowlder of white quartz, in form singularly like a calf's head (no calf's head that found it), eyes of gold, lips and teeth of same material, and ears too. The thick heavy leaves of gold are of remarkable purity. The value of gold in the bowlder is estimated at $4000. It came from Forest-Hill tunnel; was found 1100 feet in the tunnel, and 300 feet below the surface; it was from the Grove claim, belonging to J. C. Bowers. Lucky *hombre*, if he makes a good use of it. We recommend him to build a pretty bower, for some fair flower; then in some happy hour, his gold will tell its power. Perchance, he has this home, and now this gold has come to tell the wandering one he must no longer roam, but dwell in that happy home. Another splendid specimen we saw in the hands of Mr. Baker, from Shasta, a rare and curious gem, like a shell, with cakes of shining gold. Its weight, twenty-seven ounces, pure. This is one of the finest and most beautiful specimens ever dug. Who says the gold of California is giving out? It is only just begun; but we fear it will give out if we continue to ship it off, for we are abusing our privileges. The Deity placed it here for the use of California, to build our homes and manufactories and workshops, our ships, canals, and railroads; and if we send it away much longer, and fail to use it ourselves, we shall be deprived of it as we deserve.

HOLLOWAY'S PILLS.—Every known disease, pain, or ailment of the stomach, bowels, liver, or organs of respiration, is controllable by this remedy, which acts directly upon the blood, the bile, and all the fluids of the body, freeing them from impurity, and giving tone to the organization by which they are prepared and circulated.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

AS A REMEDY for Dyspepsia and Indigestion, we think the Oxygenated Bitters unequaled. They are free from alcohol, and contain—judiciously combined with other hygienic substances—oxygen, the chief vital element.

SPECIAL NOTICES.

☞ **Oxygenated Bitters.**—

WORCESTER, June 27, 1854.

Gentlemen: After suffering much, for two years past, from Dyspepsia, I was induced to purchase of your Agent in Worcester, a bottle of your *Oxygenated Bitters*, and after a trial of less than two bottles, I find myself radically cured.

I have not the least hesitation in recommending them to all who are afflicted with this distressing complaint. You are at liberty to use this as you think best, to further the sale of this excellent medicine. Yours truly, JOHN GRAY.

Any individual suffering from weakness and derangement of the stomach, nervousness, or debility in any form, can be cured by this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORRILL, cor. Third and K. sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 19-1m

☞ **COUNTERFEITS! COUNTERFEITS!**—HAVING been informed by our friends in some sections of the country, of the great injury done to their Hair, by the use o what purported to be the genuine **LYON'S KATHAIRON**, but proved to be worthless counterfeits and imitations; we caution the public against such imposition. Avoid all dealers who attempt to sell the spurious articles, for they are not to be depended upon in any matter. The great excellence and universal popularity of the genuine **LYON'S KATHAIRON** is attested by its immense sale—nearly 1,000,000 bottles per year; all pronounce it the most excellent preparation for the Hair ever made. Sold by all respectable dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
19 1m *San Francisco, California.*

☞ **HOUSEKEEPER WANTED.**—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ **Wigs! Wigs!! Wigs!!!**—BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.

v8-13 1y 233 Broadway, New York.

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**

Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of

WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

☞ **THORBURN'S Preliminary Wholesale** CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

19-tf J. M. THORBURN & CO.,
15 John street, New York.

HOTEL INTERNATIONAL.

San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present

Lessee and Managers,

A. S. HALEY,

JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;

thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen,

LINES FOR AN ALBUM.

Bright thoughts should have a brilliant shrine,
As jeweled cups hold costliest wine,
And clasps of gold should guard and bind
The record's of a maiden's mind.

Pure as the page thy thoughts will be,
As pure the sighs I waft to thee;
And, lasting as each written theme,
My fond affection and esteem.

The pages now look dull and cold;
But let them once thy thoughts enfold,
And dear, beyond all earthly sum,
The altered volume would become.

And then, if, haply, on the page
My name thy pencil might engage,
Oh, thrice repaid, in heart and mind,
If, Mary, *thine* were with it twined!

(Porter's Spirit.

Country Homes—Home Education.

The annexed letter from our new correspondent F. A. C., upon the value of a Home Education in the Country, and approving and commending the plan of our esteemed friend N. B. H. upon that theme, we most gladly accept, and lay before our readers, and we trust we shall have the pleasure to hear often from the same source. It will be most gratifying to N. B. H. to learn, that her noble efforts to awaken a due attention to this all-important subject, is being appreciated by her own sex. This is what is to be desired, and we feel confident other gifted minds will come to her aid, and co-operate in this great work:

San Juan Valley, Monterey county, May 15th, '58.

Editors Farmer: The noble "appeal" of your gifted correspondent at "Oak Shade," must find an echo in the heart of every mother who "covets earnestly the best gifts" for her children. How truthfully she portrays the blessed influences of a country home! Not all the advantages of society, not all the appliances of refinement and luxury which a city life affords, can for a moment weigh against its sweet seclusion from all that is corrupting, enervating and baneful to the youthful mind. Our children may lack the air of polished ease, the drawing-room elegance which distinguishes those who mingle daily in cultivated society; but what are these when compared with the simplicity, the guilelessness, of those who have never been fettered by conventional restraints, or trained to the simulation too often practiced in fashionable life. Then too, its advantages, in a physical point of view. The bounding vigor which thrills the veins, the bloom of health which mantles the cheek of children who ramble over the hills and plains in search of flowers, chase the butterfly through the fields and toss about in wild glee, the fragrant hay in a clover meadow, may well be envied by the city girl, who can never enjoy, in a formal promenade, the exuberant happiness of a country ramble.

But I meant not to write a dissertation on rural pleasures. They have been so much more ably drawn by your correspondent, that I can only hope that every mother may read her golden teachings, till many homes such as that over which see presides, may beautify and gladden our lovely valleys.

The Holy Scripture beautifully says, "As in water face answereth to face, so the heart of man to man;" and the letters of N. B. H. have awakened in one heart at least, a longing desire to know one who "loves all that is beautiful, truthful, and good." If they had been written a few months earlier, I should have waived all ceremony, and, without the formality of an introduction, have sought her acquaintance in her own home. Living but a few miles distant, "Oak Shade" was once, to our family, a familiar haunt. Often have we sat under those noble old oaks, and enjoyed fruit and pleasant converse with its gentlemanly proprietor, Leonard Frost; whose fine taste planned, and whose untiring energy carried out those improvements, at a time when improved farms were far less common in California than at present. At that period, I spent two years of my life almost within sight of its shade, under a similar grove of majestic oaks, in nearly entire seclusion from society, and well can I appreciate the sense of isolation from my own sex, which N. B. H. so feelingly deprecates in a former letter. Had I then possessed a friend so congenial as she might have proved to me, my time would have been much more happily spent. As it was, I occupied myself with the education of my children; and, that I might perchance effect a little good among those around me, gathered together a few of the neighboring children, also, at our home, and instructed them with my own. Such a system, I conceive to be the best that can be adopted for our children. A home education, with the addition of a sufficient number of scholars to furnish the necessary stimulus to the youthful mind. I could not be more happily employed than in carrying out such a plan now. With a select class of little girls, who might grow up with my own as one family, I should indeed be happy; but the care of three little ones, not yet emerged from the period of sweet babyhood, and manifold domestic duties, have prevented the consummation of such a plan, and I am reluctantly compelled to send my elder children to a neighboring school.

But I must beg your indulgence for this desultory letter. It has been conceived while my hands have been employed in the homely household labor, necessary at this busy season of haying and harvest, and I have had literally to snatch the time to pen it down.

Such interchanges of thought and feeling as are permitted in your valuable paper, I esteem a great privilege, and I could not repress the impulse to tell N. B. H. how much I enjoy her spirited, earnest letters; and express the hope that she may long continue to instruct and enlighten us mothers on the grand subject of Home Education.

F. A. C.

The Two Flowers.

"Flowers are like open bibles, scattering thousands of texts along our pathway."

Our readers will peruse the following eloquent and beautiful sketch from our earnest correspondent at Oak Shade with delight.

How much more beautiful would earth appear to us, and how much more happiness would be diffused over tis earth, among the dwellers upon it, were we all to strive to look for, encourage, and cherish that which was good and true, instead of seeking for the dark shadows upon it. How much better to look for bright and beautiful *flowers*, instead of hunting up the *nettles* that must invariably sting those who seek for them. We have spoken our thoughts in another column upon the beauties of those parables of Him "who spake as never man spake;" whose great teachings were always from earth and its beautiful and useful, or man and his labors and duties.

We rejoice at the reception of the following inestimable communication. We know we shall have many responses to it, for there are voices in every little flower, and it holds communion with the denizens of the earth in a mysterious way. Who can tell but that often some little sweet flower that may have grown upon the grave of kindred or dear friend, at vast distances from us, may have had its seed wafted to us by the breeze of heaven, or borne to us by some peculiar design of Providence, so that this little flower shall spring up in our pathway, to remind us of that loved one, or to awaken us to a train of thought that shall give joy to our own souls or that of others. Watch then these little glories of earth. Let not the eye turn from them away. Listen to their voices, for God planted them, the dews of heaven watered them, and they are sent to us for our good.

We confess we have been deeply affected by the beautiful story of these two flowers. It awoke in memory a scene of deep interest to us, of "years lang syne" of life and joy, of death and the grave, and of little flowers upon that grave; and opening a book of record dear to us, we saw recorded the following:

As through a little glass we see
A wide expanse of air,
And earth, and sky, and field, and tree,
Spread out in beauty there:
So in the smallest thing of earth,
A leaf, a bud, a Flower,
We may perceive the wondrous truth
Of an Almighty Power.

We know not how in becoming words we can thank our esteemed correspondent for this valued communication. We can only say, we know it to be a Heaven-sent missive that will do good, and feel that the reward will come to the writer:

Oak-Shade Farm, Santa Clara Co., May 5, 1858.

Editors Farmer: As you have received my previous weak efforts so kindly, and treated an expression of thought from me so courteously, you find I avail myself of the liberty of addressing you on different subjects. The subject of this communication is a flower; yes, a simple, delicate, little flower, the culture of which, not yet perfected, has given birth to beautiful thoughts, in relation to individual existence.

This tender flower is the product of seed from France, given to your correspondent by a lady friend in San Francisco. It was the only one which came up. Having so few flowers, I nursed it carefully, as it seemed to be a tender plant from the first. I saw it daily, but it seemed not to grow; it was there the same tender little thing as at first. I knew not what to do for it to cause it to thrive. The soil is not very favorable to flowers at best. On going to see it one day, I discovered a wild lupine had sprung up near it. I reached forth my hand to pluck up the intruder; but no, said something within, let it alone, the tender one you may not be able to keep, with all your care, but this, a native flower, will thrive without your care. I heeded my spirit prompting, and let the rude, uncultivated intruder stand. It has grown well. For some time I noticed no particular change in my tender one; but a few days ago, on going into my garden, I somehow went immediately to the poor little one, now completely sheltered by the stronger native plant. Judge of my surprise when I found it in good condition, putting forth buds for blossom. Ah! thought I, Mr. lupine you are a benefactor to the tender one I so much feared for, although I in my ignorance was so near taking your life; thanks for the lesson I have learned thereby. I sat there over those two flowers and reflected upon individual life, sympathetic influence, constitutional dependences, natural affinities, circumstantial occurrences, and their varied effect; and to-day I find my mind occupied with the same reflections; yes, I even went so far as to compare the tender flower to female dependance in general in life upon her more independent brother man. I again compared the strong uncultivated flower standing in its natural strength and independence, to man, occupant of power to shelter, protect, and thereby bless and sustain.

There is a time in female life, when all are, to a greater or less extent, dependent upon man for his protection, however independent circumstances may afterwards enable them to be; and it is too, in that brief period that, of all others, man is most apt to trifle with her destiny, and be forgetful of the relationship that exists between man and woman naturally—that of brother and sister. This period in female life is her girlhood, the joyous spring-time of young womanhood. And should fate, or chance, or no matter what, throw her in contact with those who forget they are her God-made guardians, she is less able to protect herself than at any after period; for in her is implanted a disposition to look for support and protection; and the first man who forgets his manhood, teaches her a lesson and takes away a mask. Yes, teaches her that she must protect herself; that he is no guardian. O, I pity the man so far fallen from his nobility of soul in the protector of woman, who stoops to betray.

Again I will go to my flower. I thought too, while looking on it, of the delicate confiding woman who is sheltered from the rude blasts of life by her stronger companion, ever reaching forth to sustain, by his strong arm, her more delicate nature. Ye silent flowers, are ye endowed with intelligence, that ye are thus leading me in thought to such holy relationships among earth's children? I know that flowers have the power to bring forth delightful instruction for the soul who communes with them. I wish I could tell all that I thought of necessity, of circumstances, of weakness, and power (natural and artificial, for there are both), of independence of high and low, of rich and poor, of the educated and the uneducated, the rude and the refined, all side by side as those two flowers, and yet all live. Who know how? and where is the difference?

May 8, 1858.

Bless me, thou hidden source of thought, am I only dreaming, or is it a truth enstamped upon all created things: dependence before independence, necessity producing circumstances, both with the rich and the poor; the lowly naturally entitled to shelter from the high; the cultivated and refined dependent upon the uncultivated for support and comfort, and all naturally claiming the same privilege of independence after all, and sometimes seeking to destroy or distorb the relationship that is to sustain individual existence, and perfect the unfolding of the inner life.

Thus would I have done by my beautiful, delicate little flower, this morning showing the first full-blown flower. I know not its name, though I have seen its cheerful little face somewhere before, in other plants of its species. There is the strong uncultivated lupine in full bloom, its blossoms as perfect as that presented by the little one of much care, and the color of the flowers on both is the same, blue and white, deeper and stronger in the lupine.

Again I let my fancy, imagination, soul-dream, or whatever you may call it, lead me for a time, and I will give you the result: Here we are thought I, in our world, the strong and the weak, just as these two flowers. But do the strong always defend and shelter the weak? My reason answered—no. Again, do the cultivated always respond to the voices of the uncultivated, when they grow up side by side with us? No, said my reason again, they are too often repelled from those where they might be mutually benefited, one physically the other mentally, and thus would there be less disparity. Both of those are flowers. They will both, unmolested, arrive at full development, though one may be more pleasant to look upon than the other, one may give out more fragrance than the other, one may be perfected sooner than the other, but what of all that? For aught I know, after all our toiling, after a fashionable, refined education, it may not be equal to natural abilities practically improved. Oh! I wish we did seek more earnestly to know how to live right and truly our own individual existence, acknowledging our dependences, fulfilling our relationships so beautifully adapted to our wants, and so well calculated to benefit and happify ourselves and others. But, says one, hush dreamer, we do not like the ignorant and uneducated. Nor do I; but those whose best affections and whose hands are educated to useful employment, call them not ignorant, for all our knowledge from theory must, after all, come down to the simple test—practice, before it is useful knowledge. Now then, I conclude that some who are looked upon as ignorant, are in possession of the most truthful, and consequently the most useful part of education, that which amounts to knowledge; I mean practical or experimental. But, seriously, I could wish all educated in the best manner, the useful and the ornamental; but I somehow desire, for myself, the useful first, and the ornamental to grow up out of utility. I wish to be understood in relation to my idea of a useful life. I mean, in few words, a happy life, and one that is capable of conferring happiness. The gathering of wealth is not so useful as the imparting or receiving correct knowledge of our own, or the capabilities of others to confer or promote happiness among earth's children, whether in shelter and sustenance from the strong to the weak, the smoothing and refining influences exerted in behalf of the rude, or the physical burden of the uneducated but toiling ones, who in reality are our superiors in power to sustain and happify. All are performing their different missions of usefulness in our world. Those who are engaged in the pursuit of wealth isolated, have the least of happiness. Give us wisdom before wealth, toil in preference to ease, the heart to help all and hinder none to be good and happy.

Is there any sense in what my pen has traced on this paper. If it will go to help any one to think more correctly on any of life's duties, I am rewarded. It has seemed to me sometimes as if I stood almost alone in the world in ideas and sentiments on many subjects, one in particular, the most proper education for woman, to fit her for the holy relationships she must fill, whether well or otherwise. But all are awake now on this important theme; Heaven speed the right.

W. B. H.

My Golden Guinea—and Marble Hearts.

[The following well-written sketch will find a sad sympathy in many a broken heart on the fair and sunny shores of the Pacific. Gold has indeed been *the* idol, and hearts, and hopes, and happiness have been laid upon its shrine. That "golden guinea" is indeed a "magic guinea." We hope to see it soon, for we do believe that often such old heirlooms call up histories of the long buried past, and these histories become as books of wisdom, for others to open and read. Mary Glen has done well in giving the history of her "golden guinea." We hope she may often bring it forward, and drop it on the "marble table," and awaken other voices that shall speak until every "*marble* heart" shall be softened, and changed to human hearts. Then will this "golden guinea" become "seven times purified," having passed the fiery ordeal. That guinea will yet reveal much of deep interest:]

Everything has its history, and so has my "golden guinea." When the clouds were dark around me, that guinea came to the Mason's daughter, from a brother of the "mystic tie," with words of comfort. He bade me hope; I did so. Cheerful days soon came on, and I had no need to part with my "golden guinea." It was a guinea of olden times; time-worn, yet bright. I often looked at it; it seemed like a friend. As soon as my hand grasped it, I seemed inspired with hope. I almost felt as if that guinea had life: in looking at it, its yellow hue would change, its color varied, it grew intensely bright, and I could feel its vibration, in my hand, with startling distinctness, as if it had a being, and was making a strong effort of will to speak. I stood before a marble table, while this singular phenomenon was occurring, wondering, in my mind and soul, what it could mean. A guinea, a "golden guinea," trying to articulate; a thought occurred to me; sound helps sound. I tossed it up, and it fell with a *sound;* but not the ring of gold. *It was a human sound*—so low, and yet so musical. Ah! what can it mean? A voice; it is *a woman's voice.* Shall I fly? No, no, courage. Ah, the voice speaks; so sad, so low, so full of heartrending anguish:

"Sister, there are voices, though hushed for years, that will break the seal of silence by a mighty effort of will. The gathering thoughts of years must be spoken, to tell of wrongs, and persecution, and hearts constrained to unholy alliances, yet sanctioned by the priest and ring. Such was my destiny; such the destiny of thousands of the fairest of the *great Being's* creation. Though I have passed away from this earth, I must speak, for you can understand me. My spirit is about this guinea. Your casting me upon the marble has given me voice, for gold and marble were my arch enemies upon earth—marble hearts to sacrifice me—me, the daughter of a wealthy man, and he, with almost boundless wealth—ship, houses, goods, and gold, gold, countless gold—and he yet not satisfied. I was the idol of my parents, of the large circle of which I was the centre. The adulation I received I turned from with heart-sickness. There was too much pomp, too much gold, to accord with my youth. Just on the verge of maidenhood, with hopes all bright, and high anticipations, looking forward to the glorious future, as it then appeared to me, I had too much of the joyous impulses of youth to place a value on my father's immense wealth; I did not know there was any value to money; I did not regard it enough, even, to think that all this wealth would be mine; nor did I know, then, that this wealth was the cause that made these friends circle around me. Oh, the bright joyousness of youth! how I laughed and sung! I should have been as happy, had I been the humble inmate of a cottage. But it was love that threw this halo of happiness around me. I loved out of my sphere, *as the world of fashion terms it*—oh, fashion, how many a noble heart has been broken and sacrificed at thy arbitrary altar. I loved a noble and, to me, a godlike looking man. My love was so intense, so all-absorbing, taking in the whole of being, I could not think of wealth. The tints of youth were too bright, to be darkened by looking into the future. The heart that has truly loved, never forgets; there is no such word as forgetfulness, where our whole being has been submerged by the divine essence of a pure and holy love. Such I felt; such I feel now. The object of my devotion was wanting in what is termed the world's goods; houses, lands, and chattels; yet how divinely grand he appeared to me; on a barren island, with him, I could have felt I was a queen; the noble brow, the dark and clustering curls, the arched lip, that spoke a refined subtlety of soul, and high determination of will, the smile of intelligence, the capacity to grasp, and to demonstrate all intellectual emanations, manhood written on his brow, honesty of soul and purpose, charity for his fellow-creatures, compassion for the suffering heart. Such, sister, was my love.

"I dwelt with raptures on his words; a glance from his dark, speaking eyes would send a flood of electric happiness to my heart of hearts. There was rapture in our meeting, and misery in our parting. This love was soul-absorbing in us both. This was a perfect union, the marriage of hearts, the commingling of souls. Separated, we were bound together by an invisible electric communication; in each other's presence, our souls were held in sweet conjunction by heavenly hands. I had no thought, no will, but his; and in his manner I read naught but trusting and omnipotent devotion.

"And yet this love, that was my whole of being, was to be taken from me by a parent's marble heart. I, the favored child, the only child, where wealth flowed in abundance; the hope of many. My will was law in fashion's empire; no one dared dispute it. This noble love of mine would grace any circle; he would adorn a throne. What majesty, what dignity of mien. Oh, how my eyes would follow him, and single him from out the crowd. He would add luster to the society in which I moved. How he will tower above them all! for God has graced him with a noble soul. Such were my fond imaginings.

'You will pardon me, sister, for this outpouring of love. I was so young, then, and life a joyous, happy dream. You will not smile, for you have loved, sister, and for you my story calls up tender sympathies within thy worn and bleeding heart; and you, sister, soon shall play a grand overture on the harp of universal harmony, of universal brotherhood, of the high and holy destiny of woman, and such strings as a woman's fertile eloquence can supply to make out a high sounding piece of music, for the ultimate benefit of oppressed and unprotected woman.

"With a glad spirit of unknown sorrow I revealed the love that filled my heart with tenderness, to our first friend in life, my mother. Then came my sorrow. My world of bliss was changed; gold showed its unfeeling power, and did its hideous work. The loved one of my heart was sent to a distant land, by fraud, false accusations, imprisonment. He, so good and noble, but *poor*, with high resolves and noble purposes, yet he could not combat with the *rich man's gold.* Without one word we were severed; but not our souls—mine went *with him.* All my tears and pleadings fell on marble hearts. My father's words, always sweet till now, fell on my ears with harsh, discordant sound. 'You are a rich man's daughter, and must mate with one of your station in life; one who has wealth, family, powerful influence.' 'But, father, you are rich enough; I am your only child; I care not for wealth; let me wed the chosen of my heart. Oh, father, he is good and noble. Take him to your heart and confidence; revoke your dreadful sentence; send him not away; my heart and soul are joined to his; sever us, and I must die.' My father said, 'I have chosen, for thy bridegroom, a wealthy man, although many years older than thyself; but what of that. His wealth and mine will make thee rich, almost beyond estimation.' 'Father, this man is old enough to be my *father.* You will not sacrifice me to *age and gold?* Father, grant but my prayer: oh, let me dwell with the one my soul loveth; I am willing to go forth from thy mansion, penniless. Gold, I do not wish it, father, you can have *all.* Let me go forth in peace; let me join my beloved. I ask not for wealth, but the *wealth* that is produced by *harmony of hearts.*'

"This cruel father, heedless of his responsibility, his duty to his child; with heart turned into marble coldness, urged upon me, and, with compulsive force, doomed me to be the wife of a man I look at with loathing, and whose age was double mine own; with avarice, and hideous passions, stamped upon his brow. Those who have met an adder in their path know the feeling well which I entertained for this detested man. Yet, the authors of my being (father, mother, should be reverential names), with costly dress and great parade, gave me to this man, and called it *marriage,* while my heart was blended in a pure and truthful union with the poor but godlike man.

"Days of apathy came on. I was a tenement without a soul. But for this unfatherly and unworthy act, I should have passed my days in peace, and, at the end, with a song, have passed into my Maker's presence. A few months I lingered on, till the grieved spirit passed its earthly bounds. One hundred and ten years have passed, since I left this mundane sphere, and this 'golden guinea' coined in the year 1750, belonged to the rich man to whom my youth's fullness, and bright hopes, and my beloved (in whose fond soul I now rest), were sacrificed. This guinea, I have watched its course till it was placed in your hands; then I knew that I should speak, with your assistance. I know that you are not fearful in the cause of right, and will write as I have dictated, to save, perhaps, many a warm and loving heart from being sacrificed to gold, and to prevent my earthly sisters from going into an early grave, who, if allowed to love where right, and reason, and affinity reigned, would lead a long and useful life of happiness. Oh, parents, if ye would be reverenced and loved, constrain not your sons or daughters in their hearts' choice. To love is human; God *is* love; the day will come when love will harmonize the world; when the laws of marriage will be governed by affinities, not by gold; when a new life principle will awake, that will carry people onward to a higher happiness than they ever thought attainable in mortal life. I have but a few words more to say: Sister, when you wish me to speak, place upon the marble table the 'golden guinea,' and *I will come.*"

Farewell, Mary Glen.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and Individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

J.L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Budds' Nerve and Bone Liniment, warranted the best in California.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

BRANCH HOUSE:
EMPIRE BLOCK,
13-3m *MARYSVILLE.*

Letter from our New York Correspondent.

NEW YORK, May 5th, 1858

EDITORS FARMER: The President is happy, Kansas is quite comfortable, the weather cool, and the CALIFORNIA FARMER comes to us as smiling and sparkling as ever, graced as it is with such a bevy of fair correspondents. If these four great institutions of the day are all right, the others will all follow suit, as a matter of course.

The first of May has come and passed. More than ten thousand families and firms have changed their residence and stores, furniture has been broken, Croton pipes have burst, children have been lost, mammas frightened, papas have scolded (a little), and thousands have slept on the uncarpeted floor, many had to make a trunk answer for a table, knives and forks were dispensed with, and no fault found by friend or foe.

I noticed, by the last California papers, that there is a great scarcity of news in the Golden State. Why, in the name of common sense, do they not send on to "Bosting," they always keep the article on hand there, made of the best material and warranted to last, and to keep in any climate. They sell it low for cash, and throw in a few startling incidents, such as murders, horrible accidents, the price of chickens, and such refreshing *little* matters, to comfort all who need the *comforts* of news and chickens. The Yankees are keen and cute, so they must be wide awake or the "Bosting" folks will give them a second-hand article at a plump price.

Well, the English Kansas bill has passed, and is the law of Kansas. It has not settled the question at all, only postponed it for a time. The great battle must yet be fought; there are but few who doubt the result, when the final decision must be made at a future day. Congress is dull, Washington is dull, and cotton dull.

A mysterious epidemic is now prevailing in many parts of the country, called spotted putrid, typhus, or brain fever. It seems like them all, and yet differs in many respects from all, and few attacked with it survive. Many live but three or four hours after they are taken with it. May it soon cease its terrible ravages.

Many are so foolish as to really believe that Congress will now do something for the country, after spending four months in getting a plaster on to "poor bleeding Kansas," and after all their labor and cuteness they have put it upon the wrong place, and will have to tear it off at a future day. But the members have their pay, and what more is wanted, except to put money in the pockets of their friends, which they are doing pretty freely; but again, "Uncle Samuel" is rich, and don't seem to mind it.

There is a larger crop of wheat growing now on this side of the rocky mountains, than has ever been known before, and all parts of the country promise to yield bountifully of this great necessity of life. There is now ample promise of a great abundance of breadstuffs and fruits the coming season, which I hope will not prove unfounded.

From Europe, there is nothing of paramount importance. Everything is passing along in the usual routine. From India, it will be seen that the rebels are flying before the Briton. From China and Japan, things are so and so. The fact is, we have no great shakes of news here anyhow.

The Steamer Company is getting ready, truly and surely; though long delayed it will start all right, and carry *all* the passengers that come at the advertised price, and no mistake. Then, and not till then, will the present incubus depressing your State be removed. May God speed the time. More of this in my next. B.

LAWTON OR NEW-ROCHELLE
BLACKBERRY PLANTS!!
PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now
OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)
BLACKBERRY PLANTS,
under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.
N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.
Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskillful hands.
Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,
v9-2 3m South Norwalk, Conn.

SEED WAREHOUSE.
No. 110 CALIFORNIA STREET,
(Established in 1850.)

THE undersigned, successor to the late firm of J. M. MOORE & Co., has constantly on hand, and receives by every Express and clipper ship from the Atlantic States and Europe, additions to his already large assortment of choice
Field and Garden seeds, Flower do., Fruits do., Tree seeds, Canary, Hemp, Millet, Rape and Maw seeds, Herb seeds, French Sugar-Beet seed, Chinese Sugar-Cane seed,
DUTCH BULBOUS ROOTS, and other FLOWERING ROOTS, BULB GLASSES, GARDEN TOOLS, &c. &c.,
which he offers to the Farmers and to the trade throughout the State on liberal terms. The old and wide-spread reputation of this House, of furnishing the best Seeds that can be procured in the Eastern States and Europe, is a sure guarantee that every article sold will prove true to the label, and will grow, if properly planted. Most of the Garden Seeds are raised and put up by the Shakers, at New Lebanon, New York.
N. B—Parties wishing small papers of Seeds for samples, can have the same forwarded by mail (postage paid), by forwarding the cash, at the rate of 25 cents per paper; also, packages of Flower Seeds forwarded through the mail at the same rates.
CATALOGUES furnished, on application, with prices attached.
For sale, wholesale and retail, by
S. W. MOORE,
Importer and Dealer in Seeds, &c.,
v8-2-3m No. 110 California st., San Francisco.

FARM STOCK, ETC.

French Merino Sheep.

HAVING been engaged in importing and breeding FRENCH MERINO SHEEP for several years past, I can now furnish RAMS and EWES, either imported, or raised by myself from imported stock, equal to any that can be found in this country or Europe.
I WAS awarded all the prizes on French Merino Sheep at our last State Fair; and all the premiums awarded to this class of Sheep at our last National Fair, and the most of those at the State Fairs of CALIFORNIA, Michigan, Indiana, Missouri, Wisconsin, and also at the Provincial Show of Upper Canada, for the present year, were awarded either to Sheep raised by myself, or to stock from Sheep raised by me, and sold to others.
CIRCULARS, giving a full description of my flock, sent by mail to all applicants. Information can also be obtained of the Editors of the CALIFORNIA FARMER.
Prices as low as the *same quality* can be purchased of any other person, and Sheep delivered in New York, free of charge. JOHN D. PATTERSON,
WESTFIELD, Chautauque County, NEW YORK.
v8 24 1y *6m

WEBB SOUTHDOWN SHEEP.

HAVING RAISED MY FLOCK OF PURE WEBB SHEEP (by importations, and purchase of Col. L. G. MORRIS), to as large a number, as my land will accommodate, I now offer a few EWES, and several BUCKS, for sale, at from $40, to $100 each.
I believe mine to be the only flock of PURE Webb Sheep in America, and am confident, that no other person can sell as fine quality, at as reasonable prices.
Also for sale BERKSHIRE and ESSEX PIGS, of the best blood, from COL. MORRIS' importations.
For further information—address,
J. C. TAYLOR,
HOLMDEL, Monmouth Co., N. J.
Or J. Q. A. WARREN, San Francisco.
N. B.—COL. L. G. MORRIS, of Mt. Fordham, N. Y., has very kindly given me the privilege of referring parties to him, as he is well acquainted with my flock at the present time. [24 6mis

Austin's Patent Wooden Fan WINDMILL.
THE undersigned has secured his PATENT for the NEW WINDMILL
invented by him recently, and which by every test yet made, has proved to be most completely successful.
This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.
This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.
THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.
Any person of common ability can put them up, as directions for so doing go with them.
JESSIE A. AUSTIN,
PATENTEE,
STOCKTON, Cal.
N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. [14] J. A. A.

AMBROTYPES, PHOTOGRAPHS,
Daguerreotypes and Melainotypes.
VANCE & CO.,
Corner of Third and J streets,
(Hiller & Andrews' Building) SACRAMENTO,
HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons
The Genuine Patent Ambrotypes,
which, since their introduction at our establishment in San Francisco have gained such popularity.
We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.
We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner
UNSURPASSED ANYWHERE.
Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee
PERFECT LIKENESSES
to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.
☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,

WHEELER & WILSON
MANUFACTURING COMPANY'S
SEWING MACHINES.
343 Broadway, New York.
Agencies throughout the United States.
Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.
Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.
THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.
They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.
The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

HOTELS, &c.

MERCHANTS' HOTEL,
MARYSVILLE.

THIS OLD ESTABLISED HOUSE, in order to meet the demand upon its increasing business, has recently been enlarged by the addition of a number of NEW AND ELEGANT FAMILY ROOMS, a new Promenade Gallery of Two Hundred Feet in length, and has been otherwise renovated and improved, making it one of the largest and most commodious, as it always has been the most quiet and orderly Hotels in the country.
The Proprietor, in returning thanks to the Merchants, Business Men and Citizens of Marysville, and to a large portion of the Traveling Public for their generous patronage, assures them that no pains or expense will be spared to make this permanently, in all that constitutes a First-class Hotel, the best in the city.
The Merchants' Hotel employs no runners. It is located on **First street, near the New Bridge,** on the Yuba river, where the Proprietor (always on hand), will attend personally to the wants of his customers, and hopes and expects the same liberal patronage the House has always received from a discriminating public.

Who are the Mudsills?

The Mudsills of Society, it has been said, are those whose sinewy arms sustain the social fabric. Without the artisan, how could any of the upper classes live, or enjoy the wealth that constitutes them of the upper ten? Let one of them, for instance, be placed with his thousands and his education, in the midst of a wilderness, without shelter, other than the blue canopy of heaven; without subsistence, save that which he can dig with his fingers from the earth. Around him are growing trees which can be wrought into comfortable dwellings; but he cannot convert his money even into one insignificant ax, to fell them; and if he could, he would not know how to use it. He cannot gnaw down a tree, as the beavers do, for nature has seen fit to adapt his dentals to a different purpose. There he is, look at him; homeless, shelterless, and alone. Heaps upon heaps of gold are lying around him, and yet his gold cannot bring him the simplest comfort. While he is wandering through this wilderness, he hears the sound of repeated and heavy blows. Rubbing his eyes, to convince himself that he is not dreaming, he travels on in the direction of the sound. Through an opening in the forest, he discovers a strange sight. 'Tis a *"Mudsill"* at work with an ax upon a tree. Glad of society of any kind, he makes up to the spot. He asks that hardy pioneer what he is doing, and the reply is, "I'm about to build my cabin." And how will you do that? is the next query. "Wal stranger, arter this yer tree is down, I'll jist set that old saw to work; then, I reckin, I'll take them ar wedges and bust open the logs; arter that, I'll rive a right smart chance of boards; then I'll git out my frame, and ef you'll call round this way about ten days from now, mebby I'll show you what sort of a hotel I keep." The millionaire *must* have a house, even though it be of clapboards; so he will ask the mechanic, for what he will build him one. He tells him of his wealth, his ability, and willingness to pay for it. But the only bargain he can make with the individual who owns the tools, and has the knowledge of their use, is to give him every *peso*. Who is the Mudsill then? His education, before spoken of, is valueless under his circumstances, and his clapboard or log palace is unfurnished with any of the appliances to which he has been accustomed, and we may well imagine that he will lead rather a hard life in that settlement.

Other pioneers soon discover their retreat, and, as if by magic, there springs up a town, where, but a short time before, there were but two houses. The fallen millionaire can now employ his talents as a legal adviser, or a quack doctor; for laws will soon be found necessary, and medicines are also indispensable in highly civilized society; which, by the way, often breeds its own diseases. In either of the above ways he can gain some distinction, and win back a portion of his lost treasure. And as he grows wealthy through the quarrels or illness of his neighbors, he will increase in self-esteem, and lay claim to be the founder of the city, when, in fact, he was a wretched and homeless vagabond, without the knowledge of a decent digger Indian. The individual who charged him the modest price of all that he was worth, to build him a house, will probably bring his family into the place, and, in process of time, "be gathered unto his fathers." And as his children become of age, they will discover, through the aid of a fashionable education and immensity of their father's legacy, that those who labor are the *Mudsills* of society. As they come upon the stage of action, most loudly will they howl of their patrician blood, and deny that their father ever labored, even for one single day, to amass his wealth. Amass, did I say? He *stole* it; for he meanly took the advantage of the necessities of a fellow being, and shamelessly robbed him. How many such are there in California society, of humble origin, suddenly elevated, who have become inflated by the possession of wealth, to which they have been before unused, that seem to wish, by their bearing, to convey the impression to those around them, that they were "to the manner born," instead of from the dunghill.

In the settlement of this State, the social order was reversed, and he who could, and did, labor, was the proudest aristocrat; and even to this day, among us, the man who labors through the week is more respected, and more worthy of it, than he who sports a glossy hat, dresses in the hight of fashion, and gleans his living from the lunch-tables of the rum-mills of Montgomery street. Wealth, the foundation of aristocracy, is moreable. To-day one man is the possessor of thousands, invested in inflammable property; to-morrow, a mass of smoking ruins is all that is left to tell of his title to opulence. Another may invest in ships, and freight them with precious cargoes, and while he sleeps and dreams of fortune, his tempest-tossed barks may founder, and he be poorer than their builder. Yes, only he who labors that is independent, and above the changes that mercantile panic brings upon all who are within the circle of its destructive vortex; and only he is the aristocrat, who possesses the intellect to elevate and aid humanity, and consecrate himself unto that end. SOLTERO.

The remarks of our friend Soltero are too true, in those points where he speaks of those who have invested their wealth in inflammable matter, as the ruins of Nevada, San Andreas, and Mariposa too truly testify. We rejoice that a proper feeling is being inherited in regard to the laboring classes; they are the only independent men now.

[For the California Farmer.]

The Plowing and Planting Season.

LA GRANGE, Stanislaus county, May 20, 1858.

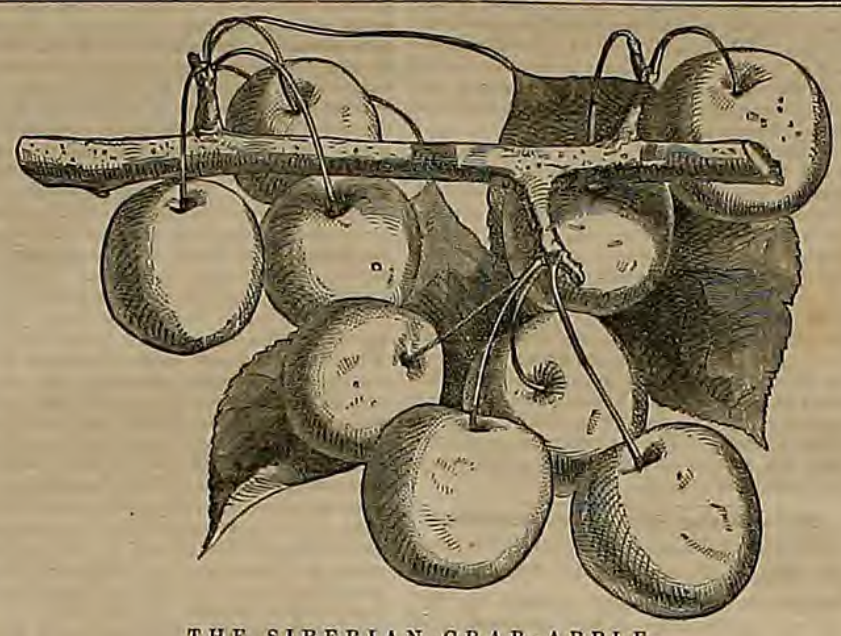
EDITORS FARMER: In my last letter, some five or six weeks since, I promised to give you and your readers a few facts in regard to Plowing, the time when to plow, and the advantages of plowing at the right time. For the last three or four years I have often spoken through the FARMER, in relation to plowing in the spring, for the next year's crop, or what is more commonly called fallow plowing. As this is no new thing to your readers, at this time, I only design to speak of the most suitable time to perform this work, and the condition the land should be in when the work is performed.

One year ago, the 10th day of last January, I began plowing on a new piece of land, and continued on the same until after the 20th of February, when we had a heavy fall of rain, that made the land entirely too wet to plow. We then went on to a piece of land that had grown some three crops of grain, and remained there for some three weeks, when we went back to the first named piece, which was finished in March, or 1st of April; at this time the vegetation had sprung up. The field was sown soon after the State Fair had closed its session in Stockton, say last of October and 1st November; put in all of one kind of seed; land all of one kind, sandy loam, slightly tinctured with clay. That portion plowed last, where the ground was getting dry, after the vegetation had started, and the heavy beating rains had ceased to come, so as to beat down and make it hard, yielded far the best; yes, I can safely say it has produced twice the value. This was all sown in wheat. The early plowed portion scarcely makes a fair crop of hay, whilst that portion last plowed yields a fair crop of wheat, at least the best or as good as is in this portion of the State.

Now, I will make some statements as to the crop on lands which had raised three crops. One portion was plowed, when it was too wet to plow on the first named piece. That portion that was plowed when the land was getting dry and after vegetation had started, produced alike to the first named parcel. I am satisfied that it is entirely an error to plow land containing too much water, or to plow too soon after a heavy fall of rain.

And now in conclusion, let me say to your readers, that I attempted to plow a piece of land, and after a day or two's work, thought it entirely too hard, and so abandoned the work until last November, when the plowing was finished; and that plowed in the spring and the last portion plowed was all sown the same day, harrowed in and then rolled. Result as follows: that portion of the ground plowed in the spring produced three times as much to the acre, one making a good crop of wheat, and the other portion had no good wheat; as that plowed in November only made a poor or very light crop of hay.

All of my grain was covered with the harrow and the cultivator, and after this rolled with a heavy roller. Now that portion of my land plowed the latest, after the heavy rains were over, is worth at least $10 more to the acre. And here I give, as my opinion, that fallow-plowed land is worth $10 more to the acre, than that plowed in the winter, and immediately sown. The above land was plowed from six to nine inches deep, and from experiments made, I am of the opinion that this is entirely too shallow; and I have, this season, plowed from ten to fourteen inches deep, by the use of one of T. O. Shaw's deep-tilling steel plows. I may remark here, that on examination, I am satisfied that Mr. T. O. Shaw, of San Francisco, makes the best plow in the State of California, and not to be excelled in any of the Atlantic States; and I may not stop by saying only that he makes a good plow, he makes all sizes, from large to small, and almost every article that the farmer wants to use on his farm, and they are of home manufacture—what we want to make us a wealthy and independent State, and not be at the mercy of the rich importer. Adieu, I. D. MORLEY.



THE SIBERIAN CRAB-APPLE.

This useful as well as beautifully ornamental Apple should receive a greater share of attention than has been given to it in California, for it will become invaluable in our climate as a preserving fruit. From the common Siberian Crab, a fruit originally beautiful from the hand of nature, hanging upon the tree in clusters like ripe cherries, there have been produced seven new varieties, of which Downing gives full description. They are the Large Red, Large Yellow, Double-flowering Chinese, White Currant, Purple, and Striped; each and all possessing characteristics of beauty or worth, or both, and certainly meriting the attention of orchardists and nurserymen. We refer to Downing for the particulars of each.

[For the California Farmer.]

The State Fair.

MARYSVILLE, May 27th, 1858.

EDITORS FARMER: By perosing your valuable paper, I observe that your ambition is being concentrated, with intellectual power to the great work of the anticipated and coming State Fair, to be held on Cortez Square, commencing by order of the Executive Committee, on the 23d August next. Why, I would ask, is it that the FARMER is the only paper to take an active part in this great work? Why do not our own papers here, the News and Express, raise their voices and fill their columns, with notices and encouragement, to go on and stimulate machinists, the agriculturist, the stock raiser, the fruit grower, the horse tamer, the bare-back rider, the Spanish lasso, in a word, to urge the people of our rich and fertile State, to become interested in this great and glorious enterprise? Our committee are already in the fields, and the orchards, and the deep ravines, the long and narrow tunnels, inhabited by the rugged miner, seeking for the new inventions of their different modes of mining and separating gold from the flinty rock; our mechanics are rapidly piling up the brick and mortar in the spacious pavilion, gothic in its style, as commenced already; but, strange to say, that scarcely a word is said by way of urging on this great work, only by your valuable paper. Much rests with you; in view of a general exhibit, a general universal display, and of California productions, throughout its entire territory. Much rests with you, in urging the public, to give their entire attention to this matter, and in promulgating the great advantages to be derived by carrying on this grand and noble enterprise.

Every means I trust will be used to afford entertainment for the thousands of visitors that will assemble here, and no pains will be spared by our committee, to make this the largest, the most brilliant, the most extensive Fair, ever held in California. We have hotels equal to any in the state; we have a community with large hearts, and plenty of means, and good dispositions, ready to entertain all that will visit Marysville in August next; let the word pass on and go around through the south and the north, and let all, both editor and reader, feel and become fully interested, and let us all do the most in our power to aid the committee in their arduous labors. More anon.

— O. P. Q.

Our friend is quite complimentary, as well as earnest, and we are glad of it. We need enthusiasm in this cause; else it will not advance. Our friend is rather severe upon our brethren of the press at Marysville, for although we felt called upon to urge them on, yet we feel they are doing considerable, and of late we are glad to notice their strong appeals to the people—it is all needed—for they will find that the work to be done, and the duties required of the committee are, indeed, Herculean tasks, and only about *two months* remain to work. The Marysville papers can do much to awaken the community directly around them, and we hope they will give "line upon line," and "precept upon precept" here a little, and *there a* GOOD DEAL, so as to secure grand results—for *results* are the things wanted.

[For the California Farmer.]

The Scotch Thistle.

EDITORS FARMER: Seeing how strenuously you advocate the rural interests of California, I do not hesitate to call your attention to an evil creeping upon us, which now in its infancy may be easily crushed, if you can convince the community of the importance of each man doing all he can to help the good work; but which, if neglected for a season or two longer, will gain such strength as to be an irreparable injury to the country—I allude to the growth of the Scotch Thistle.

A friend recently from Sacramento, told me a few days ago, that he passed about an acre of Scotch Thistles, where he noticed half a dozen or so growing two years ago. That acres of thistles will be the ruin of thousands of acres of pasture land, if not promptly attended to. The seeds will be carried by the wind into numberless out-of-the-way places, where, as the plant troubles no one, it will be allowed to ripen its seed, to be still more extensively spread over the country.

Within my own experience, thousands of acres of fine pasture land in Van Dieman's Land and Victoria, have been rendered all but valueless by this pest, brought to the country, in the first instance, by some Scotch shepherd, as a memento of his fatherland; allowed to ripen its seed, the wind sowed it in waste places adjacent, where it was no one's business in particular to destroy it; no animals to eat the plant, nor finches to eat the seed, the pest has spread itself to an extent no one can imagine who s not witnessed it. I have read of large plains in South America, producing nothing but thistles. Let your constituents look out in time, or they may find their pasture lands destroyed in the same manner.

I fear the season is too far advanced to allow of much good being done this year, but surely some one near this acre of mischief, will take the trouble to pass a scythe over it, rake up and burn as much as possible. If this is not not done, the plant will call attention to itself in so any unexpected places, next fall, as to make it the business of a great many to commence the task of destroying them; if not disposed to look on quietly, while the Carduus Benedictus, or *blessed thistle*, enters upon possession.

Believe me, dear sir, yours, very truly,

— SAN LEANDRO.

We are sincerely gratified to know that attention is being given to the subject of the Thistle. We have noticed its gradual increase in many places, and our farmers and graziers are too prone to neglect the insidious advances of this "scourge," as is well remarked by our correspondent. It is to be hoped that every farmer and land owner will take the wise counsel now offered, and join in a war of extermination upon the *Thistle*; and we would also add another pest, that is fast creeping into our fields; we allude to the *Red Dock*, one of the noxious weeds that increase a thousand fold annually.

MESSRS. S. & W. LONG have a splendid stock-farm; good location, and fine stock and crops upon it. The crops all look well; trees all full of fruit; vines contain promising crops of grapes; and yet it is hardly fair that so good crops, so fine a farm, and so delightful a prospect should be allotted to some seven *bachelors*. It is a paradise without the guardian. We felt it a sad case, and was about to scold as we write this, but only ask these fine and prosperous young men if they don't mean to find a bevy of fair damsels to take to their homes before long. Vaca valley is as fine a valley as grows out of doors. From the Post-office we had, with our glass, a fine view of Vance's (the daguerreian) ranch, that was the scene of daring aggression last season. Mr. Vance has indeed a beautiful place, and has it well stocked. Wherever the land was properly cultivated, good crops is the result; otherwise, poor crops.

SHIPMENT OF TREASURE by the steamer Golden Age, June 5th, $2,346,062 46.

Aboriculture.

TREES! Trees! How strange it is, that while almost every body admits the desirableness of planting ornamental and shade trees, so few take hold of the business in earnest. Pass anywhere into the country, and you find the "homes of the people" standing bare and unsheltered, the suns of summer and the blasts of winter alike being allowed full force upon them. The proprietor has always been *going to* set out some trees. But the "spring work" and the "harvesting" have pressed just at the time when they should set their trees, and so spring has gone by, and autumn has gone by, year after year, and the thing is not yet done.

We take the above excellent and truthful remarks from an editorial upon the subject of "Tree Planting," which we found in the Portland (Me.) Transcript. It expresses the very words we have uttered many times, as we have passed from county to county, in this State, and it is not only *strange*, but it is melancholy, to see so many homes in the country remain without a tree, shrub, or flower. We know the excuses that many persons will give, the unsettled titles to land; it is not their own, or they have bought it two or three times, and now expect to lose it; and they have deferred and postponed, until they are so accustomed to a barren spot that they do not mind it.

We know that these unsettled titles have been the cause of great evil to individuals, families, and to our State; they have been a curse to California. More than half of these "grants" were conceived in iniquity, and matured in sin; but, thank heaven, the darkest times have passed, and a better day is coming. But as we look around at the vast number of country homes, we cannot but feel that if the present occupant, though not an owner, if he or they had *improved* the lands then in their possession, with orchards and gardens, to the highest, their income would have been sufficient ere this to have *purchased the land* twice over; or if they had been compelled to have lost their improvements, their income would have purchased a new farm, and have stocked the same. The delay of improving the land in California, and of adding to the beauties and comforts of the "homes of California," have put the State back more than ten years. We trust no more delay will occur among our rural population, but that a spirit of rivalry will spring up, to see who will do the most to "beautify the homestead."

Good and Bad Cultivation.

"Experience is a good school-master;" and surely, we think, *some* will be taught, in California, before long; and we should think they would smart worse under some of the teachings they receive, than do the boys under the birch.

We have taken considerable pains to examine the great grain-fields of Napa Valley, and those of Suisun, in Solano county, in contrast; and while the former will yield thirty, forty, fifty, and sixty bushels per acre, the latter will give twelve, eighteen, and twenty; and the difference arises from this fact—the one is good cultivation, while the other is bad, or rather no cultivation at all. These remarks apply to the cultivation in general; there are exceptions in both cases. Of these and other facts we shall give illustrations.

The general cultivation of the Napa district is excellent. *Summer-fallow land* for their wheat, subsoiled or deep plowed; rotation of crops, with seed wheat guarded from smut by blue-stone, have secured them abundant crops, and saved them from loss; while a skimmed-surface plowing, three, four, or six inches, and disregarding the preparing the seed, and late plowing and planting have brought on less and poor crops. We hope no more such sad experience will go to the account of any of our harvesters.

Two Questions for Agricultural Philosophers.

STOCKTON, June 1, 1858.

MESSRS. EDITORS: Can any of your correspondents give the reasons for the two well-known facts, embraced in the questions below. A *theoretical* solution of these, on a correct basis, would most probably be of great *practical* benefit to the farmers of the country, where such things exist:

Why does barley grow and fill better, scattered among wheat, rye, or oats; and *vice versa?* Why do all kinds of small grain grow better and larger, and remain green longer, on old roads, which have been traveled until they are as compact as land can be well made, and apparently lifeless?

— GOLFON.

We present the queries of Golfon for our readers. The questions are of some importance, and worthy study and solution.

BRADSHAW'S LINE OF CLIPPERS.—The work has begun and one ship is already on her way to California with passengers and cargo. S. C. Bradshaw & Co. of Boston, have established a fine line of clippers to run regularly between Boston and San Francisco, for passengers and freight, and it requires no dint of prophesy to tell of the success of such a line, and of the rapidity with which ships will be filled with passengers and frieght when the Frazer news shall reach the East. We hail the establishing of this line as a good omen, and feel confident it will meet with unbounded success.

Breeds of Domestic Cattle.

Some weeks since, we spoke of the importance of crossing the *Blood Stock of Europe* upon the native stock of California, especially the *Spanish cow*. We present the following very excellent article upon breeding stock, one number of a series, which we copy from the Tribune, and ask a careful attention to it. It urges the same grand points to which we alluded in our article:

In a late issue we described the four grand divisions of the British domestic Cattle, to some one of which all the great families for which that island is now so famous, in an agricultural point of view, and to the cultivation of which, we, in America, have, in late years, paid so much attention, are directly to be referred—the Middle-horns, the Longhorns, the Polled-cattle, and the Shorthorns. We also add a few brief inquiries into the origin of these divisions, and the nature of the countries in which they appear to have been when first known, and sometimes, at very remote periods, peculiar, if not indigenous. These investigations are not, as it may at first appear, merely idle speculations, or interesting only to the historian, the antiquary, or the natural philosopher; since it is not to be disputed, that all animals are the best adapted, by their nature and constitution, to the climate, soil, and country to which they are indigenous; and that if removed thence, and colonized elsewhere, they will thrive and succeed the best in countries of which the climate, the soil, the productions, and even the face of the landscape, is the most analogous to their native home. More especially is this the case with regard to animals, which are liable to so great modifications, from circumstances of pasture, soil, and climate, as are neat cattle. Nor is it a surmise, improved by fact, that they are so modified and so adapted, by nature, to certain localities, that they cannot be amended or improved, in their native homes, by any admixture of larger, nobler, or more profitable breeds; which have invariably failed in places unsuited to themselves to ingraft any of their own peculiar excellencies on the inferior stock; while they have done so in an eminent degree, where the same inferior stock exists in a climate or region more analogous to their own. An instance in point is the Ayrshire breed of cattle, now peculiar to the districts of Kyle and Cunningham, immeasurably superior to any other Scottish breed, which were entirely unknown in the districts of which they are now the boast, within the short space of seventy years. That they are the result of some foreign cross upon the native stock of the Western Highlands, is not to be doubted; and all probability seems to point to the Teeswater Short-horns as the origin of that cross. Now the cross of the Teeswater Shorthorn has been found to be utterly useless in effecting any improvement on the Kyloes, among the bleak and barren mountains, which form their home, in which they are exposed to biting blasts, cold rain, and sleet, or snowstorms and long sub-Alpine winters, and where they glean but a scanty subsistence from the coarse and innutritious grasses which vegetate with difficulty among the rocks and heather of the Highland hills. So soon, however, as the same Kyloe is brought down into the mild, maritime Lowlands, rich pastures, and soft climate of Ayrshire, the same cross *hits* to a miracle, and the result is one of the most highly and justly esteemed of modern families of cattle, both for its milking and fattening qualities.

It is not, therefore, useless, but, on the contrary, highly desirable for the cattle breeder to know what is the native climate, the aspect of the country, the soil, the pasturage, and the general character of the locality in which different breeds of cattle have their origin; since, if he desire to succeed, he must hold his choice of the families of cattle which he would rear, subordinate to the nature of the climate and country into which he would introduce them, and must neither attempt to acclimatize, with any hope of success, the races indigenous to rich level Lowland pasturages, such as the Teeswater Shorthorns, or the Leicester Longhorns, among the wild and savage mountains, which are precisely adapted to the hardy hill-frequenting Kyloes, which will thrive and rejoice on barren hill-pastures, where the Shorthorns would pine and perish; nor, on the other hand, to introduce the sturdy, stunted races of the moorlands to the deep fat fenlands and morasses, which are most congenial to the large Lowland cattle.

We now proceed, briefly, to enumerate the most distinguished families of each of these divisions, with a passing mention of the qualities for which each family is the most celebrated, previous to devoting a separate paper to each one of what may be called the great families of modern cattle, especially those families to which our own cattle chiefly trace their descent, or to which we are looking for the improvement of our general stock. This done, we shall give a little time to the examination of some families of our own native stock, as it is called, which have become, in a great measure, distinct varieties, endowed with admirable characteristics, and capable, so far as can be understood, of reproducing themselves pure, *ad infinitum*. Such appear to be the famous red cattle of New England.

But to proceed: Of the Middle-horns, by far the most celebrated family are the Devonshires; which, being inferior to many others for dairy purposes, are superior to all as working oxen, not arriving at their highest excellence as beef cattle, until they have been worked up to their sixth year, when they fatten with great ease and rapidity; and, if they do not reach the vast weight of some other races, give beef the most beautifully marbled of all, and equal in flavor and richness to any. The Devonshires are very beautiful, docile, active, the working-oxen being able, sometimes, to trot six miles in the hour, and remarkably free from disease. The Herefordshire cattle, which are near akin to the Devonshires, are, perhaps, even superior to them as beef cattle, some good judges giving to their flesh the palm over all others, and are good workers in the field; but the cows are exceedingly inferior animals, bad milkers, and of no account. The Hereford ox is a heavier animal than the Devonshire, and has a greater propensity to form fat. The Sussex is another kindred race, intermediate between the two, with many of the good qualities of both, with less activity, and a greater tendency to form fat than the Devonshire, while the cows, though better milkers than the Herefords, are not sufficiently good for dairy purposes, and are of too restless and uneasy a temper to form fat quickly. The Glamorgan cattle of Wales resemble the Herefords, in all respects, with inferior size. The Pembrokes closely resemble the Western Highland Kyloes, and with their rugged hardiness and adaptability to all climates and hardships, possess their quality of furnishing delicious beef. For mountainous regions, they, and the little Irish cows of Kerry, which have been termed, emphatically, the poor man's cow, from their excellent milking qualities, in which they far excel the Scottish and Welsh cows, are the *ne plus ultra*. The Ayrshire is, in all respects, an admirable animal, but especially in the qualifications of the breed for dairy purposes, in which it is, perhaps, unequaled. Both in quality and quantity of milk they are not to be surpassed; the average annual yield of an Ayrshire cow being computed at from 600 to 800 gallons of milk, giving an average of 287 pounds of butter, or 514 pounds of cheese. Their fattening qualities are highly respectable, but not equal to those of the Devonshires, Herefords, or Durhams.

The Longhorns, formerly in immense repute, have fallen off in public estimation, in late years, and it appears to be the general opinion that they have deteriorated. They were never famous as milk cattle, and their beef is estimated as clearly inferior to that of the Devonshires, Herefords, or Durhams, while the peculiar formation of their long, decurved, widespread horns adapts them but ill for draft.

Of the Shorthorns, there are four families, two of them superlatively excellent, the Durhams, Yorkshires, Lincolnshires, and Alderneys. The boast of the Shorthorns is, that they unite, in the greatest degree, the qualities of milking and forming fat—and the boast is a just one; but the drawback is, that the over-tendency to form fat, in the pure Teeswater Durhams, operates against the milk-giving qualities of the cow, and often renders the bull barren at an early age.

In the Yorkshire cow, which is a pure, unmixed Shorthorn, produced merely by careful breeding from parents, on both sides, famous for milking rather than fattening tendencies, this defect is completely conquered, and she may be pronounced the *ne plus ultra* of all animals for the combined properties of yielding milk, and eventually making beef. She is the favorite dairy-cow of London, averaging 20 to 24 quarts per diem, giving a larger yield of butter from the same quantity of milk, the older she grows, and, when her service to the pail is over, fattening rapidly, and with great ease, and yielding beef of the first quality. The Lincolnshire, generally, is an inferior Durham. The Alderney is an inferior, fancy race, famous only for the great richness of her small yield of milk.

Horse Racing—Betting vs. Gambling.

The trial of the *speed* of the horse, in a race of any kind, of his capacities for *strength* or *endurance*, we esteem of great moment, in order that we may establish a high standard in all classes of the horse, and thus increase only those of the highest character.

In England, horse-racing has become a science, and races are patronized by the nobility and all the higher classes, and the stakes and the sums bet are hardly looked upon as *gambling;* yet in this country, our races, as they are termed, are merely plans laid for a species of betting little better than the tricks of the "little joker." We believe we can appeal to every person not immediately interested, either in the horses up or the bets made, who will admit that, at the races, as generally carried on in California, "the race is not to the swift," but will depend entirely upon the "*outside bets*" of a peculiar kind; and we ask our fellow citizens to tell us how far the races in California have had a tendency to better the racing stock of California, or to elevate the science of horse-racing. In these remarks we mean not to speak despairingly of those races which have generally been held near this city; but rather the many scrub races which are held in the country.

In our travels over the State, we have often seen the sad waste of time and money, as well as kindly good will and feeling among neighbors and friends, which have been lost at these country races. Such has been the scenes we have witnessed of barefaced deception, aided by bad whisky, that we are convinced the mass of these races are a curse to the places where they are held. Of one thing we are certain, they ruin many men, by leading them into scenes of dissipation and gambling that end in their ruin and the ruin of their families.

We append an article we find in the N. Y. Spirit of the Times, of April 10th, which shows how betting is conducted in England at their races; and upon reading this statement, a person who has ever attended our races can see the *wide difference*. The tendency of the one is to ascertain the *true merits of the animal*, and to stake money upon the *judgment* formed of each animal: while the other is first to find "green" ones, or raw recruits, and mislead them, or by chicanery secure large bets, and permit the best horse to be beaten, by collusion with the owner of the same. We hope good citizens everywhere will discountenance such races everywhere, until races are established upon principles of fairness and equity. See the following:

In no country in the world is betting carried on to so great an extent as in England, whether on man or horse, or any of the other multifarious objects of sport or pastime. Betting on horse-racing, however, takes precedence of all other sports, not only on account of the respectability of the gentlemen engaged in it, but also as to the amount of money invested; indeed it has become a science—the study of which is necessary, to save parties engaged from inevitable ruin. It is with a view to avoid such a catastrophe that we devote a portion of our space this week to the subject.

One of the first principles we would inculcate is—a gentleman should never risk more money than he can afford to lose—his losses or winnings should be paid or received with urbanity. Racing cannot be a pleasure to a man when he is unable to say conscientiously, "may the best horse win!" The best system (for those who bet heavily) to insure this state of mind, before an important race, is round betting, or in other words, making a book on the different horses, so that but little can be lost and much *may* be won.

A Patent Silk-throwing Machine.—A silk-throwing machine has been patented by Mr. B. A. Murray, of Dublin, the object of which is to simplify the ordinary method of silk-throwing by diminishing the number of operations. In one operation this machine is made to do the work of three in the present system, as the silk is spun, doubled, and thrown at the same time.

Wealth of the United States.—The aggregate wealth of the United States amounts to $12,000,000,000, and the population is 24,000,000 souls. The wealth, divided by the population, gives $500 to each person, young and old, and, counting five persons to each family, it would give the handsome little fortune of $2,500 to every family of the Republic, not excluding the slaves.

Watches, and Watc Making.

John Bennett, Esq., F. R. A. S., delivered a lecture in the St. Barnabas School-room, Kingsquare, Clerkenwell, "On the manner of making a watch, and how to make it." After a few preliminary observations, he traced, from the early Romans, the art of measuring time by water, the next step being taken by Galileo, who gained his ideas of the property of a pendulum by observing the oscillation of a chandelier, and he was at once struck with the value of its action, declaring it to be a law of Nature, but, before he could apply to useful purposes these ideas, he was cast into prison, for what was then considered to be impiety. Still, the pendulum in time became the great principle of motion, and although it could be preserved in clocks, it remained for Dr. Hooke, by his great skill, to get rid of it, to reduce the size of the clock so that it could be carried in the pocket, and to substitute for the wagging pendulum the riband of steel, from the elasticity of which motion could be obtained and continued under all the changes of position. The next great advance in the manufacture of watches was to meet the purposes of navigation, and on the suggestion of the great Sir Isaac Newton, Parliament offered a reward of £20,000 for the production of a watch which should indicate at any part of the world the true time, and thus enable the mariner to know precisely where he was at any given time. The great philosopher said, when the subject was mooted, "Get a chronometer, and you may soon have the longitude," for the latitude could at any time be obtained by an observance of the heavenly bodies. Accordingly, a number of watchmakers set to work, but it remained for George Harrison to make one that approximated to correctness; for it went to the West Indies and back with a variation of only one minute and fifty-five seconds. Mr. Bennett next alluded to the manufacture of Swiss watches; numerous specimens of which were exhibited in the Exhibition of 1851, and also in the French Exhibition, and said that all must admit the real beauty of watches of Swiss manufacture, and with the advantage of being fifty per cent. cheaper than they could be manufactured in this country. He had visited Switzerland for the purpose of seeing their manufacture of watches, for the purpose of perfecting his trade, and ascertaining the secret of their success. In these districts he saw amongst the people a large amount of industry, comfort, cleanliness, intelligence, good order especially, and all the appliances of material happiness, which made a sorry contrast between the watchmakers in Switzerland and those he met with in Clerkenwell of a corresponding class. On his last visit to Switzerland he ascertained, in the year before there had been exported a million and a half of watches. In 1853 he found that duty was paid in this country for 42,000 watches for home consumption; in 1854 there were imported 79,000; 1855, nearly 100,000; and he understood for 1856 the number would be considerably above 100,000. Now that was a state of things which required their most serious consideration. He attributed, mainly, the reason why Swiss manufacturers could undersell English manufacturers to the employment of women, and the general and systematic, sub-division of labor, one person making one description of the movement, instead of as in England a man being a Jack of-all-trades to put all parts together, requiring at each operation a change of tools, and a consequent loss of time. In Switzerland it was no uncommon thing for a man to get a gross of watches at a time to finish, and if a manufacturer wanted any number of parts of a watch, they commonicated to the class of workmen in the mountains by electric telegraph, and so almost any number of watches could be produced in a given time. He then dwelt on the superior education of children in Switzerland, and said, unless a man was well educated, especially in the science of mathematics, he could never make a good watch. He concluded by contending that if they employed women, they would render the manufacture of Swiss watches for England unnecessary, and be a great social blessing to their country. The lecturer concluded amidst cheers, mingled with slight disapprobation from the watchmakers present.—N. Y. Spirit of the Times, April 10.

Emory's Patent Corn-husking Machine. We had the pleasure, says the N. O. Delta, of witnessing the practical operation of the celebrated patent labor-saver, at Mr. Campbell's office, 90 Camp street. It *was* a real pleasure to see a machine so simple, and, at the same time, so perfect in its arrangement, do the work for which it is adapted. With a boy to supply the corn ears, and wait on the machine, a man can husk from five to six hundred bushels of corn per day, applying the power by a treadle with his foot, and feeding in the ears with his hands; without the machine, a smart and active negro cannot husk more than forty bushels per day—so, in two or three days, the machine would save its cost, which is small. So simple is it, that we may describe it in a few words: It is worked with a foot-treadle; the ears are fed to a cavity in the side of a rotating cylinder, leaving the but of the ear, where the husk is secured, projecting over the end of the cylinder; the revolution of the cylinder brings the but of the husk in contact with a stationary knife, which whips it off, and the further revolution of the machine causes the ear to fall into a trough, where, an ingenious but simple arrangement of hooks, working by eccentric cams, strips off the husks and throws them aside, while the ear slides down the inclined trough into a vessel placed to receive it. The removal of the thick, hard ends of the husks, which the knife clips off, leaves them adapted to the stuffing of mattrasses and other upholstery purposes, for which they find sale at from $80 to $100 the tun. Mr. Campbell owns the patent right for the United States. He is making arrangements to encourage home manufactures, by having his machines constructed in New Orleans, and as he holds a good thing, his enterprise will doubtless be well rewarded.

Bees.—Of the large number of swarms of bees that have left the parent hives in Santa Clara Valley this spring, the San José Tribune states that nearly one-half have been lost. The swarming generally occurred during the very warm weather, and the extra heat may have been the cause of the unwonted circumstance, by rendering the hives, which usually are made of redwood, too warm for the tenants. Many of the swarms were successfully hived, and remained in their new quarters a day or two before their final begira. It would be well for beeholders to consider whether the hives at present in use might not be improved with reference to their adaptation to this climate, either by a modification in their construction, or the choice of different material. Considering the numerous swarms which have escaped from the farms, this year and last, and the remarkably rapid increase of the insect in this climate, it is evident that in a very few years our woods will be stocked with wild bees.

May-Day Festival at Dedham, Mass.

We copy from the Boston Journal the account of the celebration of May-day, at Dedham, Mass.; and as it is something new, and highly worthy of imitation, we hope their example will be extensively imitated in California on next New Year's Day, for our time of planting trees would be a most worthy commemoration of New Year's, and we know the ladies would cheerfully join in a feast to commemorate such an event:

The residents of the pleasant old village of Dedham celebrated the first day of May by setting out fifty trees—a most laudable and appropriate mode, and an example which it to be hoped may be hereafter extensively emulated. The trees were planted on a portion of High street, and about the Common and agricultural grounds. An attentive examination of the process showed that the work was done in a manner thorough enough to prove a warrant of the future vigorous life of the trees. The holes were dug broad and deep, and the roots covered with an ample quantity of rich native loam.

At 5 o'clock in the afternoon the assigned task was completed, and laborers and guests were called to dinner. A bountiful table had been spread in Agricultural Hall, and about 250 ladies and gentlemen sat down to it. Edmund Quincy, Esq., presided, and congratulated the assembly upon the accomplished work of the day. He said he believed there was, somewhere upon our books, an unrepealed statute forbidding the erection of any such heathenish or Popish emblem as a May Pole, but here they had been setting up fifty. Dedham had been a favored place in respect to tree planting. The great man (Fisher Ames) by whom Dedham was most widely known, had left to its citizens a legacy, in the trees which he planted with his own hands, to keep green his memory in their souls. Mr. Quincy concluded his very agreeable remarks by inviting the Brigade Band to "auspicate" the occasion with an air, after which H. O. Hildreth, Esq., the toast master, read the first regular toast:

The Old Trees of Dedham—The venerable shades of the forefathers—may they long continue to shade men no less patriotic.

Rev. Dr. Lamsun responded, and gave a sentiment to the memory of Fisher Ames.

Mr. Quincy made an amusing point of the fact that the whole of the Boston Bar escorted Mr. Pratt, an eminent lawyer of more than a hundred years ago, to Dedham, on his way to New York, and contrasted the bar of that day with that of the present day in the matter of numbers. The party had probably breaklasted at the house of Mrs. Ames when Fisher Ames was a baby.

The second regular toast was:

The Trees we have this Day Planted—Long may they stand and flourish, reminding the passer by that it is true wisdom to take the shady side of the street and the sunny side of life.

Responded to by Carlos Slofter, Esq. A toast complimentary to the clergy was responded to by Rev. Mr. Babcock, of the Episcopal church, who, in alluding to the work just done, spoke of the vigor of the trees, which would live when the ones who planted them were no more, and the winds in the branches would be a hymn to their memory. Letters were read from Hon. M. P. Wilder and George R. Russell, Esq., who were prevented from attending.

A sentiment for the "Young Farmer of Quincy," brought out Josiah Quincy, Jr., in one of his happiest speeches. He had himself that day bought fifty trees for his own home, and had come out to sympathize with the occasion of their planting theirs. Their work had been a great one. He quoted Scott's Laird of Dumbedike's advice about sticking down a tree as having done much to cover Scotland with trees, and thought the influence of the present work would be good. There had been political meetings enough, and he hoped people would unite and do something to beautify the land. He told an original anecdote of John Adams. There was a point in Quincy river covered with beautiful trees, that was called Cupid's Grove, which has now disappeared. Here the young people used to go and write their names on the bark. He had once gone to see Mr. Adams, with a venerable lady who had once been a flame of his. He shook her by the hand and said, "Madame, how would you like to walk in Cupid's Grove with me?" She replied, "Mr. Adams, it would not be the first time." He closed with the sentiment:

The Occasion—May it be the origin of a great Tree-Soil party, which will cover the land with beauty, and not allow any root of bitterness to spring up among its members.

Several other sentiments were given, among which was one by the President, complimentary to Motley, the historian, whose works were written under the shades of Riverdale. The proceedings were terminated by the darkness before they were completed. Mr. George Coolidge had written a poem for the occasion which he could not deliver.

In the evening a promenade concert was given by the band, in Temperance Hall, which was attended by a large audience.

Feeding Spring Pigs.—The best food for young pigs is *milk*—first from the sow, and, after this ends, skim-milk from cows. In all changes of the food of Animals, the transition should be gradual. Sudden changes always injure. Pass gradually from new milk to skim-milk, and from the latter to sour milk. If there is not enough skim-milk and sour milk for all the pigs can eat through spring and summer, then reduce their number. Or, barley or pea meal may be gradually added and increased in quantity. As the pigs grow larger, and the milk decreases, grain takes its place. There is a great mistake often made in feeding milk to pigs, by allowing slop and dish water to be thrown into it, which dilutes it, and consequently the animal cannot take in enough for its most rapid growth. Feed the milk in its concentrated state. We have known spring pigs fed for the first few months with all the milk they could eat, and afterwards properly fattened, that weighed 300 to 350 pounds at ten months.—[Country Gent.

Premium for Native Wine.—The Missouri Wine Company have offered $250 in premiums for the best pure native wines, the product of the wine-growing States of this country, and of the vintage of 1857. Each sample is to consist of three bottles, and to be forwarded to R. McKenzie, Esq., chairman of the committee of Awards, St. Louis.

It is stated in an Athens journal that a manuscript copy, on parchment, of the Gospels in Greek and bearing the date 480, has recently been found in the garret of a house in that city. It is said to be in good preservation, and has been deposited in the public library of Athens.

The most cross-grained are by no means the worst of mankind, nor the humblest in station the least polished in feeling.

MISCELLANEOUS.

WHEELER & WILSON
MANUFACTURING COMPANY'S
SEWING MACHINES.
343 Broadway, New York.
Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.
Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as Woman's Friend.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

H. C. HAYDEN, Agent,
157 Sacramento street
9r-7 3m (between Montgomery and Kearny)

JOHN D. ARTHUR,
IMPORTER AND JOBBER OF
Agricultural Implements,
Washington street, near Davis.

Has just received, by late arrivals from the East, and will continue to receive, a large and varied assortment of AGRICULTURAL GOODS, among which are the following, which will be sold *at the Lowest Market Rates:*

Miscellany.

TAKE NO THOUGHT FOR TO-MORROW.

Poor heart! why clog thyself
With weights thou need'st not bear?
Enough for every passing day
Is its own load of care.

Why be in haste to pay
A debt before 'tis due?
So soon life's sorrows come, why run
To catch the distant view?

O! let to-morrow's woe
In wise concealment rest;
Do not her frightful visage trace,
And wear it on thy breast.

Enjoy, endure, and do,
From vain forebodings free;
And make life's bitterest moments yield
Their lingering sweets to thee.

RAPIDITY OF THOUGHT IN DREAMING.—A very remarkable circumstance, in an important point of analogy, is to be found in the extreme rapidity with which the mental operations are performed, or rather with which the material changes on which the ideas depend are excited in hemispherical ganglia. It would appear as if a whole series of acts, that would really occupy a long lapse of time, pass ideally through the mind in one instant. We have in dreams no true perception of the lapse of time—a strange property of mind! for if such be also its property when entered into the eternal, disembodied state, time will appear to us eternity. The relations of space as well as time, are also annihilated, so that almost while an eternity is compressed into a moment, infinite space is traversed more swiftly than by real thought. There are numerous illustrations of this on record. A gentleman dreamt that he had enlisted as a soldier, joined his regiment, deserted, was apprehended, carried back, tried, condemned to be shot, and at last led out for execution. After the usual preparations, a gun was fired: he awoke with the report, and found that the noise in the adjoining room had, at the same moment, produced the dream and awakened him. A friend of Dr. Abercrombie dreamt that he crossed the Atlantic, and spent a fortnight in America. In embarking on his return, he fell into the sea, and, awaking in the fright, found that he had not been in bed ten minutes.—[Home Journal.

MIRZA MOHAMMED IBRAHIM.—Dining one day with a gentleman well-known for his conviviality, the decanters halted so long before the Mirza, that the host exclaimed with a little impatience, "Pass the bottle, Mirza; what do you call, in Persian, the man who stops the wine?" "We call him Mohammed," said the Mirza, with a quiet smile. The same person was one day disputing with the Mirza about the excellence of his cook, of whose fame he was very jealous, and wound up with, "He ought to know something about cooking, for he has been forty years before the fire." "Well, said the Mirza, "he may have been *forty* years before the fire, but he is raw yet!"

KNOWLEDGE IS POWER.—While a worthy individual, of the march of intellect school, was "laying down the law," recently, to a knot of acquaintances in one of the streets of Cupar, he caught the eye of a carter hard by, who had been vainly endeavoring to raise a sack of potatoes upon his cart, and who, on the instant, thus appealed to the man of knowledge: "Come awa', Mr. ——; knowledge is *power*, ye ken—*gi'e us a lift on wi' this poke o' taties!*"

JOSIAH J. LECOUNT,

111 Montgomery street,

9y-7 SAN FRANCISCO

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN

AND

NURSERY,

On the American River, 3½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere. For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE,

embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being

CORRECT AS TO NAMES AND VARIETIES,

are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

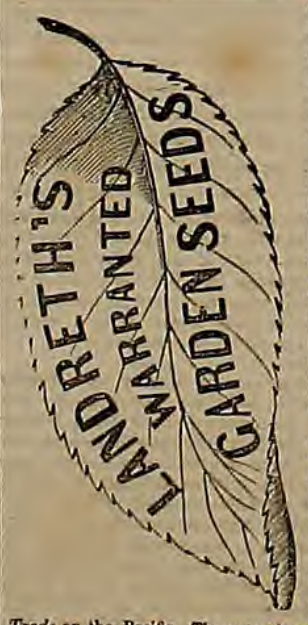
Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

v8-18-6m A. P. SMITH.



THESE Seeds have been well known in the Atlantic States for nearly three quarters of a century, a period of time almost reaching back to the days of the Revolution. From a small beginning the business has been gradually enlarged, to meet the growing wants of the country, until it has become an immense establishment, exceeding, in extent, any similar concern in Europe.

The demand near home, and orders of old customers abroad, have absorbed all the Seeds which it has been in the power of the proprietors to produce, and they are not *now* prepared to offer them to the *Trade* on the Pacific. The present card is, therefore, simply to announce the fact of increased effort on the part of the proprietors to grow greater quantities than heretofore, and THEIR EXPECTED ABILITY TO FILL ALL ORDERS FOR [illegible] OF [illegible]

[illegible] will be happy to [illegible] correspondence on the subject with Seed Merchants in California, &c., and will forward a copy of their Rural Register, *free of charge*, to all persons, whether dealers in, or consumers of seed, who may send their address by mail or otherwise.

LAWTON OR NEW-ROCHELLE

BLACKBERRY PLANTS!!

PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now

OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)
BLACKBERRY PLANTS,

under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskillful hands.

Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,

French Merino Sheep.

HAVING been engaged in importing and breeding FRENCH MERINO SHEEP for several years past, I can now furnish RAMS and EWES, either imported, or raised by myself from imported stock, equal to any that can be found in this country or Europe.

I was awarded all the prizes on French Merino Sheep at our last State Fair; and all the premiums awarded to this class of Sheep at our last National Fair, and the most of those at the State Fairs of CALIFORNIA, Michigan, Indiana, Missouri, Wisconsin, and also at the Provincial Show of Upper Canada, for the present year, were awarded either to Sheep raised by myself, or to stock from Sheep raised by me, and sold to others.

CIRCULARS, giving a full description of my flock, sent by mail to all applicants. Information can also be obtained of the Editors of the CALIFORNIA FARMER.

Prices as low as the *same quality* can be purchased of any other person, and Sheep delivered in New York, free of charge. JOHN D. PATTERSON,

WESTFIELD, Chautauque County, NEW YORK.

WEBB SOUTHDOWN SHEEP.

HAVING RAISED MY FLOCK OF PURE WEBB SHEEP (by importations, and purchase of Col. L. G. MORRIS), to as large a number, as my land will accommodate, I now offer a few EWES, and several BUCKS, for sale, at from $40, to $100 each.

I believe mine to be the only flock of PURE Webb Sheep in America, and am confident, that no other person can sell as fine quality, at as reasonable prices.

Also for sale BERKSHIRE and ESSEX PIGS, of the best blood, from COL. MORRIS' importations.

For further information—address,
J. C. TAYLOR,
HOLMDEL, Monmouth Co., N. J.
Or J. Q. A. WARREN, San Francisco.

N. B.—COL. L. G. MORRIS, of Mt. Fordham, N. Y., has very kindly given me the privilege of referring parties to him, as he is well acquainted with my flock at the present time. [24-6mis

BLACK HAWK

GENERAL SCOTT,

Will stand at the Stables of

F. K. SHATTUCK & CO.,

OAKLAND,

At $50 - - - - The Season.

AMBROTYPES, PHOTOGRAPHS,

Daguerreotypes and Melainotypes.

VANCE & CO.,

Corner of Third and J streets,

(Hiller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes and Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

☞ We invite all to *Call and See our Rooms and Specimens*, whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

Austin's Patent Wooden Fan

WINDMILL.

THE undersigned has secured his PATENT for the NEW WINDMILL

invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSTIN,

PATENTEE,

STOCKTON, Cal.

N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. (14) J. A. A.

The California Farmer.

SAN FRANCISCO, FRIDAY, JUNE 11, 1858.

Visiting Committee
OF
California State Agricultural Society.

THE VISITING COMMITTEE of the State Agricultural Society give notice that they intend to proceed on their Visiting Tour of the different portions of the State, for the purpose of examining Farms, Orchards, Nurseries, Vineyards, Gardens, Mining Operations, Quartz Mining and Machinery, and the various other Industrial operations of the State: That they will visit every section and locality that time and convenience will admit; and that as a matter of economy and saving to the Society they will hope to find all the facilities of passing from one farm to another offered them that is possible.

The Committee will endeavor to keep the public informed through the columns of the CALIFORNIA FARMER and the Marysville papers, of the routes to be taken in rotation, and the time of visiting the different localities.

About the 20th to 24th of this month, a portion of the Committee will leave Marysville *en route* northward—passing through the vicinity of San Juan, Forest City, Downieville, Monte Christo, and La Porte;

And will leave La Porte about 1st June, for Gibsonville, St. Louis, American Valley, Indian Valley; returning via Spanish Ranch, the Meadows, Buck's Ranch, Bidwell's Bar, and Oroville.

G. H. BEACH, Rec. Sec.

MARYSVILLE, May 7th, 1858. 18

The Farm Better than the Gold-fields.

FARMERS, TO YOUR DUTY.

COULD our voice reach every farmer in our State, we would say to them, *stick to your farms*. We ask the cultivators of the soil to pause and reflect ere they permit themselves to become so reckless as to abandon a good and comfortable home, even with a moderate living, for the uncertain and dangerous experiment of finding gold in the faro-ff gold-field of the Frazer-river country.

Farmers, to your posts, and pause and reflect ere you give a single thought to a change of your lot, from tilling the earth, to the hazardous pursuit of sudden riches. There may be gold at the new diggings, even in large quantities, but look at the chances and weigh them well. Do not "make haste to be rich." This mania for wealth has too often led the industrious farmer into speculations in grain; into a desire to add to his broad acres; and often, too, from his legitimate business of farming, into city lots, water lots, quartz mills, water ditches, and other plans, which have been his undoing. These opportunities for sudden riches were his temptations; if he resisted them he was safe; if he yielded he was lost; and so it has proved in all the past history of the farmers of California. And now comes the gold fever again, with its luring bait, and the cry is gold! gold!! gold!!! But we would pray that the farmers of California may stand firm, for we know there is more certain riches in the mother earth around their homesteads, than in all the new gold-fields of the Frazer, Klamath, or Kern rivers.

Farmers, reflect! Suppose it be true that "the hills and mountains are full of gold and silver," as the prophets said, will you not be sure of your share if you stick to your farms? Will not the thirst for gold bring thousands and tens of thousands to our shores, from England, France, Germany, and the other States? And, as many will leave ordinary pursuits, and hie to the gold diggings, the demand for all the productions of the earth must be greater in amount, and also of increased value; and will not the farmer be certain to receive his share of this benefit, if he wisely *sticks to his farm*, and raises good crops.

Farmers reflect! Already the news has reached the Eastern States and Europe, and the same commotion is there which we now witness here; and soon we shall see ships and steamers enter the Golden Gate, freighted with human life, all eager for gold, and they will come by thousands, aye, tens of thousands. The "great leviathan of the deep" shall come to our shores, and we shall witness such scenes as even to cause old '49-ers to gaze in wonder.

Farmers! Who shall feed these coming thousands? Farmers, look to your crops, watch them wisely, husband them well: for there is more certain gold around your own homesteads than you can find elsewhere; and is there not more certain wealth and happiness? Will you give up home and friends, kindred and health, to hurry on to toil and hardships, privation, suffering and death; and all for gold: when it is already within your grasp?

Farmers, we would appeal to you by all the ties that bind men to homes and loved ones, listen: leave not your homes, your farms; reflect, reflect. As sure as the earth revolves, so sure will the present mad excitement be riches to all the tillers of the soil, who wisely and patiently "bide their time." Labor may rise, and the cost of harvest-labor may increase: but just so surely will your produce rise in value. A few months and you will see it, feel it. All the productions of the earth will be in demand: for the thousands that are coming to our shores must be fed, and who shall feed the hungry mouths that shall *come back from Frazer folly* the coming winter? This will reward those farmers that are wise. Harvest your crops; preserve them carefully; stay at home; treasure the fullness of the earth that heaven has given; make the homes and loved ones content; and bide your time; and you, the farmers of California, shall be richer and happier than those who shall have braved dangers among the rapids of unknown rivers, the tomahawk and scalping knife of the incensed red man, and the diseases of a new clime; for you shall secure to yourselves, health, contentment and happiness—the very riches that heaven ordains for those who seek for a "home" upon California's soil.

Alfalfa.

THE successful growing of the Alfalfa has been established, beyond a doubt, upon the shores of the Pacific, by many intelligent farmers, and we are happy in meeting many persons, who, having had faith in the suggestions and advice we have given them, have planted *good seed* upon *good land*, and they are now reaping a good harvest. At the Quintay Ranch is undoubtedly the largest number of acres planted in California, and produces vast quantities of rich green feed, during the dry months. At this ranch several hundred acres are devoted to Alfalfa, and there are many farms where it is grown successfully, but we believe we have seen the finest field of Alfalfa the past week, that can be found in all California.

We visited Marysville, the past week, to notice the progressive steps for the Fair, and to visit the surroundings of the city at the head of navigation. We rode out a few miles along the banks of the river, to Briggs' orchard [reported in another place], and thence across Simpson's Ferry, and there we came to the fields of Alfalfa that did our eyes and heart good to see. Here on the farm of Col. Simpson, we found a field of fifteen acres of Alfalfa, so luxuriant that its rich verdant pasture can be seen miles off. Col. Simpson's men were mowing the second crop, which was about twenty inches high, and very heavy set—the first crop gave two and a-half tuns to the acre. This now cutting will give two tuns per acre, being fine grass; and the growth is so thick and luxuriant, that Col. S. is confident he shall harvest *five crops* this season. So rapid is its growth, that the third crop will be cut before the Fair, in August, and a *fourth* ready to cut.

Col. S. is very desirous that every person interested in this wonderful grass, should come and see for themselves, for however great this story may seem, the reality surpasses our description. We are confident that full *ten tuns* per acre will be cut from the field we saw. The best evidence of its rapid growth is proved from the fact, that the field mowed May 24th, is now ready, the coming week, for a *third* crop. We earnestly hope that all persons who desire to grow the Alfalfa, will go and visit this famous field of this grass, and judge for themselves.

Col. Simpson has also on his place *twelve acres of Corn*, the finest we have seen, being in full tassel and as high as our head, and will produce seventy-five bushels to the acre. He has also some fine Stock, a portion of which will be at the State Fair. It will be remembered that three years since, we spoke of a famous young heifer, *thirteen* months old, with a calf by her side, seen at this ranch; this same cow, now four years old, has *seven* animals as her progeny, and all very fine animals.

The Agricultural Committee.

THE Committee allotted to visit the different sections of the State, are now about their duties and busily employed; they will do their best to visit the best portions of the State. The task is a herculean one to do it thoroughly, and it will require a large amount of time and hard labor to do it well. It is to be hoped that full details of all the various modes of cultivation will be obtained by these Committees for publication, as it is very important that every successful result should be made known. The Committee will have great opportunities of obtaining facts, the publication of which will greatly benefit the cause generally.

The various results among the grain-growers the present season, upon their crops, upon land summer-fallowed, subsoiled, deep plowed, or those of the old and common system of three, four and six-inch plowing, will be looked for with interest. The reports upon orchards, nurseries, gardens, etc., will be of great value, as to these we look for great results. The vineyards of California will report largely, and their increase will form an important item.

The new stock imported into California, the past year, will be a source of much interest and importance, as it is believed that animals of nearly all the important breeds, have been brought to California within the twelve months past.

BROOM-CORN.—There is great success in growing Broom-Corn, among those who understand its nature and character. It requires a good, deep, rich, and well-cultivated soil. When at Vacaville, a week since, we saw a splendid field, of *four hundred acres*, growing upon the very ground where, two years since, we visited the races. That ground has been redeemed, and is now a highly cultivated field. The Broom-Corn has swept away all the betting and jockeying that was on that place. It needed reforming, for at that race, we remember, it was a general opinion that the best and fastest horse got beat; and yet it was said the losing horse was the winning one. Strange things happen at races sometimes. But that field of Broom-Corn was a grand sight. It grows on the land of John C. Fiske, Esq., and is an evidence, with his other crops, of a well cultivated farm.

GREAT FIELDS OF WHEAT AT VACAVILLE. When at this place, we were kindly shown the stock-farm of S. & W. Long, and while riding to it, we passed a very large field of Wheat, belonging to Mr. Glen. We rarely find a field to equal it. It contains between one and two hundred acres, and stands with long, well-filled heads, above the fences, and we think will yield from fifty to sixty bushels per acre.

EXPORTS.—The Prices Current and Shipping List states, that the export value of merchandise shipped from this port, during the month of May, is $443,369, being a large excess over that of April, which amounted to $176,203.

Public Exhibition

AT THE COLLEGIATE INSTITUTE, BENICIA.

HAVING received a very courteous invitation to attend this most excellent institution at its public celebration (the exercises to consist of declamation and music), we made it a duty as well as a pleasure to be there.

The Exhibition was held in the new brick edifice now nearly finished (to be ready at the opening of the new term). The hall was handsomely dressed with flags and banners, and wreathed with the sweet-bay, a very appropriate adornment. A platform or stage was erected at the head of the hall, with seats arranged at each side for the pupils, about sixty in number. This new large hall was crowded with ladies and gentlemen, the parents and friends of the pupils, the citizens of Benicia, and friends from abroad.

The exercises commenced at 8 P.M. and continued till 11 o'clock, the whole exercises reflecting the highest credit upon the Institution, the Principal and his assistant, and the pupils.

This Collegiate Institute for the education of Lads and Young Men, deserves to be widely known over our State, as Mr. Flatt, the founder, merits great praise for his zeal in the cause of Education, and for the perseverance and sacrifices he has made to establish so fine an Institution; for we look upon it as one of the very best in the State, and one of the most successful. Mr. Flatt, the Principal, is aided by Mr. Sarles, who conducts the Musical Department and that of Belles-lettres; these departments being very successful, under the able teaching and close application of Mr. Sarles.

Were it not that we should be called invidious, we should speak of some of the pupils, whose performances were exceedingly meritorious; but where all were so excellent, we can only say we know all were pleased. We wish we could give the whole of the programme, but space forbids.

This pleasant scene was not the usual Examination of the various branches of study, but merely declamation, recitation, dialogues and music. In these, for the speakers we can accord much merit; some of the youngest performed their parts with most remarkable and beautiful propriety, that it gave happiness to the parents, we know; for at such scenes we love to gaze upon the countenances of parents, and see the heart manifestations when a child excels; 'tis then the heart gives sunshine—the *reverse* gives a shadow darker than the earth can make; but to-night all was sunshine.

There were present at this scene, a happy bevy of beautiful young ladies from Miss Atkins' Seminary, with their accomplished teacher, who always sanctions every effort to advance the cause of Education; and as the youth of this Institute merited applause, the young ladies and parents scattered fragrant bouquets at the feet of the pupils, and often they received these, four and six each. It was a beautiful tribute of kindly and affectionate encouragement, worthy those who received the gifts, worthy the occasion, and worthy the fair bestowers.

As the chorus pieces were performed, while this handsome battalion of "Young America" stood upon the platform before the audience, all neatly dressed, with the red-white-and-blue star upon their breasts, and the gay-ribboned star floating, reflected by the light—as their well-trained voices swelled out the Star-spangled Banner, we felt "our country was safe;" that in all coming time it would be indeed "The land of the free."

As we have said, it was all well. We may be permitted to say where our sympathies lie: We noted the recitation of Casibianca, by Willy Nichols; the Dutiful Son, that of Absalom, by W. E. Smith; the Relief of Lucknow, by L. P. Marshall; Cataline, by Barrett Beers; Horatiuus at the Bridge, by H. S. Hastings; and the Address to California, by A. T. Hooper. We mention these because they are connected with our social life, and with great character in formation; repeating, as we have before said, that all the performances were excellent. Other tastes might go for other scenes and other subjects.

The young gentlemen of this most excellent College may well be proud of their beginnings. This College will make its mark upon the Pacific shores.

It is well known that a publication called the Young American is published in manuscript by the pupils of this Institute, the reading of which gave evidence of character and talent, and from its pages we hope to give our readers proof of its ability.

The Musical entertainment, under the direction of Professor Sarles, now identified with the Institute, afforded themes for much praise. Song or music is ever welcome to the good and pure, and to the refined; it is always good to all; it is good to the intelligent and to the grosser mind, even to the savage; for its tendencies are to harmonize, soften, and refine. Music comes to us with refreshing power from lovely woman, and from her voice and her magic skill we yield ourselves to them and their power to charm with music; and though our sex may not sway with so much power by music, yet, if educated to know its power and to appreciate its beauties in our education, we shall the better appreciate music, and honor and love those who are its best performers. For this reason we would educate our sons and daughters in music, as one of the great harmonizers of a discordant world.

To Professor Sarles great praise is certainly due for the proficiency that was shown among those he has thus instructed. The solos, trios, and chorusses, were all performed with admirable effect and the singing highly gratifying. Mr. Sarles must surely feel proud of his pupils, for the young ladies bestowed their fragrant offerings thickly over the piano and at the feet of the pupils. We noticed several were *decorated bouquets*, the ribbons of *red*, *white*, and *blue*, and as they fell upon the piano where the *Professor* sat, we rather thot *some* were intended for the *teacher*, although he very gallantly *said* they were intended for the pupils; however, *we* know that Flowers have voices as well as Pianos, and we can only say it *was* beautifully done, whatever was *meant*.

A brilliant display of fireworks, upon the hill outside, closed this most interesting scene.

To Mr. Flatt we believe we can herald the united voice of all present, parents and friends that in this exhibition, marking the advancement of the youth of California in useful, scientific, and solid learning, Mr. Flatt can see and feel a far greater reward than ever the gold of our coast can give.

Parents, would you educate your sons? Here is an institution worthy your esteem and patronage.

Wagon and Carriage Making.

Our attention has been given recently to this subject, from the fact of its great importance and value to our State; and as we pass over the different sections, we observe the kind of wagons and carriages used. From all the facts we gather, we are confident that the position we assumed in our issue of May 14th, upon wagon making, is correct, although a certain "Cauliflower," that was *carried away* in the wagon business, would make sporting business of it.

Should any one doubt the preference which is now given to wagons and carriages of *California manufacture*, over work of all kinds *imported*, just let such persons go to the wagon-makers of Stockton, Sacramento, Marysville, Napa, and many other places, and they can gather facts that will convince any one, that California workmen can better understand the *kind* wanted here than any Eastern builder; and the experience of purchasers fully demonstrates the fact.

Can such wagons as those built at Stockton, and shown at the Fair last year, be imported? San Joaquin can make their own wagons. Who ever saw an Eastern wagon with a *twenty-five ton load*, and ten mules? Go to Bernard's wagon-shop at Sacramento, and see his wagons and buggies. Even his California plating and gilding, down East cannot beat. True, his buggies cost more than imported ones; and why? they are better.

Go to Rippon & Hill's fine, new wagon-shop; such as are built there are mighty hard to beat. McDow & Copeland's wagon-shop, at Napa—mighty good ones made there; and so at every considerable place. We find the farmers prefer home-made. They are more fitted for our climate; the material is better seasoned; for while the imported soon give in the joints, and become shaky, those made here are made especially for our *dry* climate.

While on our trip up Napa Valley, some sixteen miles above Napa city, near the sulphur springs, out in the woods, we found the wagon-shop of Mr. Lilley; and here, with an excellent forge, good shops, iron and wood lathes, copper and brass foundery, machinery all complete, all moved by a good steam-engine, we found a manufactory where, already, about a dozen fine wagons had been finished and sold, and *seventeen orders booked* for summer and fall. And here, too, we learned this fact: a neighbor who had paid $315 for an *imported* wagon, but about three months previous, had come to this shop to have it repaired, the cost of which was $31, making $346; and after it was done, he offered a person who had just taken one of Mr. Lilley's wagons, at $280, $50 to exchange, which, had the bargain been effected, would have made his California wagon to have cost him $396; $116 more than he could have had a better one than the imported for. We meet cases of this kind often, and the fact is becoming more and more apparent, that California wagons are better adapted to California use, are better, and cheaper in the end; and all true Californians should do what they can to sustain and build up our own home manufactures.

CALIFORNIA BASKETS.—It may not be generally known that we have Basket-makers in California, but such is the fact, and good ones, too, and the baskets they make are of a good quality; and we hope the State Agricultural Society will have a premium offered for such manufactures. When at Sacramento, we called at J. R. Ray's seeds store, on J street, and examined the baskets made at his establishment, and any person who will examine them, will say that they are as well made if not better than those imported. Although but few kinds are as yet made, if proper encouragement is given, soon all kinds will be made here. It is a worthy business, and should be encouraged.

IMMENSE AMOUNT OF MONEY ON DEPOSIT IN THIS COUNTRY.—In the banks of the four great cities of this country—New York, Boston, Philadelphia, and New Orleans—there was last week on deposit no less than one hundred and twenty-eight and a quarter millions of dollars, an increase on the previous week of nearly two million of dollars. This does not show any great revival of business in the country at large. In Boston, previous to the late financial crisis, the amount on deposit in the various banks of the city, was not much over fourteen millions of dollars; it is now twenty and a half millions. The specie in the banks of the four cities, last week, was fifty-seven millions five hundred thousand dollars; the previous week, fifty-five millions eight hundred thousand dollars, an increase of a million and a half in one week. In Boston, within the past six months, the amount of specie in the banks has about doubled.—Boston Traveller of April 17.

SALE OF FINE MERINO SHEEP.—We would call attention to the excellent opportunity afforded to stock raisers, in the sale of genuine Merino Sheep, to take place on the 21st instant, advertised in another column.

"A Land Flowing with Milk and Honey."

In old '49, before a Bee of any kind was ever seen in California, and when the price of milk was *one dollar per quart*, few ever believed California to be the land that was described as we have named; but how rapidly have a few years changed our prospects for the better.

It is admitted now that the Dairy stock of our State will soon surpass that of any other in the world; and it is also admitted that our butter and cheese are fully equal to any, and our prospects are, that we shall rapidly improve upon our present standard. Our purpose now is to give a few facts, which we have gathered from actual observation, in our travel over the different counties.

When at Napa city, we were shown the collection of bees in the gardens of Mr. Barter, who commenced his present season with *ten swarms*; these quickly gave him *twenty-one* new swarms. The first hive that swarmed gave *five* swarms, and the first new swarm gave one, thus making six from one. Another gave four, and another three. The amount of honey made is enormous, nearly every hive being full, and of the most perfectly made comb. At the fine grounds of Geo. C. Yount, Esq., we were shown his collection. He commenced with *two* swarms. From the first swarm he had four, and from the first *new* swarm *three* more, thus making *seven from one*. The second hive gave off three swarms, thus making *ten from two*. We do not believe such success in Bee raising as is found in California can be equaled in the world. The young as well as the old hives at Mr. Yount's were full of bright and beautiful comb, and the comb full of honey. We have never seen comb more clear and perfect, nor in greater quantities in young or old hives. At Rochville, near Barker Valley, near Suisun city, the collection of Mr. Ab-hire, of ten swarms, was doing very well. Mr. A. was trying the plan of *division of the swarms*, by changing hives and making queens, after the plan of Mr. Quinby. This collection was in swarming condition, and the bees a little angry at having been divided. We felt their anger by a little dab at us in return for smelling their honey

That Bees will succeed in California is no longer a problem, their product, in good situations, being equal to three to one, upon an average. We would recommend, to those who cultivate largely, to plant fields of buck-wheat, this being their favorite food.

A CALIFORNIA EAGLE.—The Placer Press states, that Mr. John Linegar, of Gold Hill, while out hunting on Shipley's ravine, a few days ago, shot a large California eagle. It was a very fine specimen, and measured from tip to tip six feet and seven inches.

His House is Desolate.

The annexed most admirable, truthful, and heartfelt sketch of a desolate home, we find in the Trinity Journal. Let the earnest labor of all be, to make home beautiful; and then, whether it be the miner's, the mechanic's, or the Farmer's; whether it be the rich man's or the poor man's, there will always cluster around it those who love it well enough to labor to rebuild again; and, when misfortune doth come, though that home be laid in ashes, from those ashes shall again pring a flame of remembered happiness that hall quickly rebuild and make the new home more beautiful than the old:

Last Friday, a miner's cabin on East Weaver Creek was burned down. It was not a very palatial house, but it was home, and he had planted trees and vines about the door, under whose grateful shadows he meant to rest when the penalty of labor hung heavy weights on the extremities of pick and shovel. Now the charred logs are scattered about, the trees are dead, the young vines torn and tangled, the flowers trampled to death, and we know that man's heart is heavy when he comes home at night to cook his supper by the tumbled down chimney. If it had been Governor Weller's residence would have blazed along five hundred miles by telegraph, and the newspapers would have been filled with lamentation; but as it was only a "miner's cabin," nobody makes a fuss about it, and none visit the ruins but the owner's dog and fowls, which peer dubiously about, not comprehending clearly the exact state of things. But never mind! Other trees and vines can be planted; a nice house can be built; our brown sparrow is hatching in a bush, close by, and before long she and her brood will hop about his camp, houseless to, but rejoicing in the glad sunshine that gilds the grand walls of Nature's temple.

THE FLOUR TRADE.—We learn from the Prices Current and Shipping List, that the receipts of flour and wheat at this port, other than the products of our own State, since the 1st of January, have been 31,941 barrels. The amount of flour now known to be on the way, is as follows: From Atlantic ports, 17,574 barrels; from Chile, 1750,—making a total of 19,344 barrels. Of this amount, about 18,600 barrels are due, and the bulk of the balance will be falling due during the month.

Temperance Hotels of San Francisco.

IN the excellent reform which is progressing all over the State in the cause of Temperance, the friends of the cause will be glad to know that they have *two good temperance hotels* in San Francisco.

THE TREMONT HOUSE,

On Jackson street, Nos. 124 and 126, between Sansome and Montgomery, is a large star hotel, kept in a neat and comfortable manner, by F. E. Weygant, proprietor; and the

CLINTON TEMPERANCE HOUSE,

On Pacific street, Nos. 87 and 89, between Battery and Sansome, kept by Messrs. Weygant & Paige, proprietors. This hotel, as well as the other, is free from drinking bars and card tables, and the fare good and prices low.

TO OUR READERS AND CORRESPONDENTS. Our absence from the office nearly all the time the last few weeks, in the country, has prevented us from receiving all our letters and giving that due notice to our correspondents that we desired or they merited—for any seeming neglect we ask to be excused.

We have the closing series of Musical Entertainments, from Professor Sarles, of the Collegiate Institute at Benicia. It will appear next week.

Ben Bolt comes again to gratify his friends with a touch upon "Old Bachelors," and most excellently done, too. Will appear next week.

Two valuable communications from our valued correspondent Edith Montressor, on file to appear next week.

Stanzas from E. M. S.

The letter of Grace Greenwood, in our present number, will be perused with the interest which is ever felt for the productions of this distinguished writer.

We welcome our new correspondent "Eloise," in the poet's corner, and hope we shall often hear from her. Her lines to "Mary in the spirit-land," have much merit.

Parents should read the letter of our gifted correspondent N. B. H., upon the "Education of Woman." It is worthy special attention. We have received another letter from her pen, for our next issue.

☞ HAIR DYE! HAIR DYE!! HAIR DYE!!!

Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of

WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

☞ COUNTERFEITS! COUNTERFEITS!—HAVING been informed by our friends in some sections of the country, of the great injury done to their Hair, by the use of what purported to be the genuine LYON'S KATHAIRON, but proved to be worthless counterfeits and imitations; we caution the public against such imposition. Avoid all dealers who attempt to sell the spurious articles, for they are not to be depended upon in any matter. The great excellence and universal popularity of the genuine LYON'S KATHAIRON is attested by its immense sale—nearly 1,000,000 bottles per year; all pronounce it the most excellent preparation for the Hair ever made. Sold by all respectable dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
19 1m *San Francisco, California.*

☞ Wigs! Wigs!! Wigs!!!—BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.

v8-13 1y 233 Broadway, New York.

A New Way to Perfume our Dwellings.

THE vast abundance of Roses that now surround the homes of those who cultivate this fragrant and beautiful gift of nature, can be put to good purpose with little trouble, and afford much delight. The rose in California becomes a perpetual rose to a great degree, where in ordinary climes, it blooms but once; and if they are gathered before they fade upon the branch, another crop will follow; the true perpetuals will do this most profusely.

Now the plan we would suggest, is simply this: prepare a brown linen bag about the size of a pillow-case, and fill it with the full-blown roses, so as to make it the size of a hair pillow, flat, rather than round, and lay it inside the door of the dwelling, for all to step on as they enter—we mean the parlor or sitting-room. If the roses are picked carefully free from the branch, when the foot presses the bag the odor of the rose is given forth, and the room is sweetly perfumed thereby. This is much better than to permit the roses to waste in the garden.

A CHANCE FOR CAPITALISTS.—We have information of an excellent opportunity for any person or persons who desire an interest in a Flowering Mill, where there is a sure chance of making money. We can put any person having $12,000 or $15,000 capital, in the way of making a fortune.

CRIME.—The continued increase of crime of every kind tells of the great desperation to which men are driven for gold.

HOLLOWAY'S OINTMENT.—It is notorious that indolent sores in the muscular parts of the leg are never healed with safety by the ordinary salves. This ointment alone penetrates to the morbid cause of these fixed and obstinate ulcers, and removes them rapidly and without hazard. It is equally efficacious for all external pustules, inflammations, and wounds.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per pot.

Valuable Sheep for Sale.

SAXON MERINO;
FRENCH MERINO;
PURE BLOOD.

300 full-grown EWES; 120 RAMS;
100 Maiden Ewes;
Imported April, 1858, from Australia,
per ship Sea Bird.

THESE SUPERIOR SHEEP, ALTHOUGH LANDED under every disadvantage, are now recovering from the effects resulting through the extreme severity of the voyage, extending to upwards of one hundred and four days. The stock will be open for sale

from and after the 21st instant.

These RAMS were selected from a choice of three thousand, taken from the flocks of three of the most celebrated breeders, namely: Lawson, MacArthur, and Bettington, by whom the enormous price of five hundred and six hundred dollars, for each of the original stock, was paid. The Rams are of immense weight, thoroughly wooled, from the eye to the very hoof; producing a fine, heavy fleece, worth about three shillings per pound in the English markets; unanimously acknowledged to have the finest fleece, and largest carcass, ever imported to these shores.

The EWES were bred by Mr. Lethbridge. They, also, in proportion, are equally as large in frame, and quite as fine in the fleece, and all will be lambing in about two months' time.

The system of breeding, on all the establishments connected with the aforesaid parties, is, never to allow the Ewes to breed until three years old, thereby promoting a large animal, sound constitution, and, by judicious crossing, the most profitable fleece, in texture, closeness, length, and soundness of staple, together with a symmetrical, compact carcass, the weight of which, when slaughtered, invariably surpasses its appearance when alive.

The offer of half a crown per pound was refused for the clip of these sheep, a few days previous to leaving Sydney. In proof of the value in the London Market, reference is made to J. T. Sims & Co.'s Public Sales, in possession of the consignee, in which it will be found that this wool maintains the highest price throughout the whole catalogue.

As an investment, with a view to future prospects, this stock is worthy of attention. Every desirable advantage is embraced in this occurence; two distinct breeds, giving the facility of crossing without deteriorating either wool or carcass. Possibly an improvement might thus be gained, although this is a question entirely dependent on the market requirements, whether the preference be given in favor of Combing or Clothing Wool. Parties embracing the advantage, will be in a position to breed either, or both, whichever may prove most satisfactory to the pocket.

The advantages, now presenting themselves, are seldom to be met with, embracing every necessary requirement for establishing the foundation of a large income, with little trouble, by ordinary management, and a comparatively small outlay for such an investment.

The enterprising community of Sheep Farmers should not fail to avail themselves of this desirable opportunity of investing, which is not likely to offer again for a long time to come.

For further particulars, and samples of the fleece, apply to MESSRS. WHITE & WILSON,
Merchant street, between Sansome and Battery,
San Francisco.
21 tf J. T. THRELKELD.

James Graves. H. F. Williams.

FRUIT DEPOT,
Nos. 67, 69, and 71,
MERCHANT STREET,

CIRCULAR.

TO THE FRUIT GROWERS

..OF..

CALIFORNIA AND OREGON.

THE UNDERSIGNED HAVING ENTERED INTO AN arrangement with the OWNERS of several

ORCHARDS AND VINEYARDS,

To dispose of their Fruits when landed in this city, will give their strict attention to a

FRUIT COMMISSION BUSINESS,

And will use every endeavor to give entire satisfaction to all parties, who may entrust their business to their care.

The Rate of Commission shall in all cases be moderate. For information concerning their capacity and trustworthiness, they refer to:

Judge P. H. Burnett, Sacram'to.	Marcus Williams, San Jose.
N. Green Curtis, do.	C. T. Ryland, do.
A. P. Smith, do.	Wm. H. Howard, do.

J. W. Osborn, do.	John Rowland, Los Angeles.
Glen O. Barnett, Oregon.	John Page, do.

and to the business men, generally, of San Francisco.

GRAVES & WILLIAMS,
Nos. 67, 69, and 71, Merchant street,
v9 21-3m Opposite Washington Market, S. F.

NEW FRUIT WAREHOUSE.—We notice the erection of the new building on Merchant street, in our city, for the reception of Grapes, Oranges, Lemons, and other rich fruits of Los Angeles and the Southern country, and the Grapes, Peaches, Pears, and other delicious fruits of all parts of State, for a large and extensive wholesale trade. Over the front of the building we see inscribed the names of Graves & Williams, as proprietors. These gentlemen are known to our community, and Mr. Williams has been known as the able Secretary of the Mechanics' Institute; and his large acquaintance and excellent standing, added to that of his partner's will give to their place of business a name and character equal to any in our State. We are glad to see such places opened, devoted to the wholesale of fruit, upon a large scale, and upon a liberal basis. Success to our friends and to the cause of fruit-growing

J. BRYANT HILL'S STRAWBERRY MARKET. Mr. Hill, at his stall, in Washington Market, is always supplied with a very large stock of this luscious fruit; and as he always sells at the very lowest price, those who want this fruit should not fail to find his stand.

1858. SPRING CIRCULAR 1858.

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most

DESIRABLE STOPPING-PLACE

For Families or Single Gentlemen,
during their sojourn in this city.

THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and E. R. ROBINSON, formerly of the New York Hotel.

Some of the Patrons of the Hotel International:

SPECIAL NOTICES.

☞ Splendid Merino Sheep.—Having been appointed agent to act for some of the best breeders of stock in the Eastern States, and having advices from them in relation to their prices, and the manner and cost of shipping, we can answer all inquiries, and put parties in the way of importing stock to the best advantage. We have the sale of the great Prize Buck at the World's Fair in Paris, and also the Prize Bucks of the last season at New York, with samples of the wool, their breed, and produce. Persons in want of the best sheep ever offered for sale may learn all particulars by addressing us by mail. We can also aid them in the purchase and shipment of blood stock from the other side or from England.

☞ New Books.—We are now opening a fine collection of Agricultural Books, worthy especial notice. Various works on Fruits, works for Stock-raisers, books upon the Sugar-Cane, and new Poultry books. Farmers visiting the city would do well to call and see these works, or they can send by Express for them.

☞ Oxygenated Bitters.—

WORCESTER, June 27, 1854.

Gentlemen: After suffering much, for two years past, from Dyspepsia, I was induced to purchase of your Agent in Worcester, a bottle of your *Oxygenated Bitters*, and after a trial of less than two bottles, I find myself radically cured.

I have not the least hesitation in recommending them to all who are afflicted with this distressing complaint. You are at liberty to use this as you think best, to further the sale of this excellent medicine. Yours truly, JOHN GRAY.

Any individual suffering from weakness and derangement of the stomach, nervousness, or debility in any form, can be *cured* by this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.

Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 19-1m

☞ HOUSEKEEPER WANTED.—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit; a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ THORBURN'S Preliminary Wholesale CATALOGUE OF VEGETABLE SEEDS, *of the present year's growth*, will be published on the 20TH JULY, and will be mailed to Dealers and others requiring Seeds in quantities, inclosing stamps for return postage.

J. M. THORBURN & CO.,
9-4t 15 John street, New York.

MARYSVILLE ADVERTISEMENTS.

Auction and Commission.

[For the California Farmer.]

TO MARY, IN THE SPIRIT-LAND.

BY ELOISE.

I often think of thee, Mary,
As thou wert here on earth,
And of that bland and loving smile
That lighted up our hearth;
That bright and laughing eye, Mary,
Made glad our hearts at even.
Dost ever beam upon us now,
From thy pure home in heaven?

Since thou hast left us here, Mary,
We've had many a weary day,
For we miss thy kind and gentle tones,
That chased our griefs away.
That voice, so full of love, Mary,
Methinks I hear it now;
I see those auburn locks so fair,
Still floating o'er thy brow.

And when the moon looks down, Mary,
Upon us in the night,
I see those eyes of sparkling blue,
Thy face of heavenly light.
When the lark is in the grove, Mary,
And the leaves are on the trees,
Thy voice of gentle melody,
Comes stealing on the breeze.

The world seems sad and cold, Mary,
Since thou hast flown above;
We almost wish thee back again,
For we've no one now to love.
Oh! come to me in dreams, Mary,
As thou didst, yester-even,
And tell me once again, Mary,
Of that spirit-band in heaven.

Letter from Grace Greenwood.

PHILADELPHIA, May 2, 1858.

EDITORS FARMER: May is here. Do you remember our May—you, with whom the seasons are turned topsy-turvy? It is the month of delicate verdure and temperate airs; the fresh, dewy, songful dawn of the summer-time. We have been having very dull, discouraging, uncomfortable weather of late. April pouted, wept, and stormed incessantly, during the last days of her reign, as though, like Queen Bess, she were enraged at the necessity of resigning her empire to a successor. Queen May seems really to have inaugurated a new *regime;* she has had a fine coronation time; all brightness, bloom, and melody; and her rule, thus far, has been mild and conciliatory.

At this season, our monstrous, monotonous city wears its least prosaic, and most attractive aspect. It smiles with cheerfulness, and looks fresh, cleanly, and kindly. Our public squares, with their beautiful old trees, their green and flowery turf, their birds and fountains, their graceful, mild-eyed fawns, and, loveliest of all, their hosts of happy children, laughing and sporting in the flickering sunshine and shade, seem like gardens of the Lord, let down from "the better land," into this wilderness of brick and mortar, for our refreshment and delight.

At this season, too, the rich and blooming country around us makes itself felt, as the sea sends its influences and intimations into the very heart of Manhattan. The sweet soul of nature flows in upon us even here. We taste faint, fragrant breathings of spring, balmy odors from unseen woodlands, the scent of blossoming clover and lilac-blooms from far-away hillsides and gardens. On a breezy morning, rivers of country air sweep down our long, broad streets, carrying health and joy to thousands of exhausted frames and fainting hearts. The winds, the blessed winds of heaven, whether balmy or blustering, are ever among the most wonderful and beneficent forces of nature; the airy tides, without which all were stagnation and death, the invisible missionaries of Providence, making their way into the noisome haunts of disease and poverty, to purify, restore, and regenerate.

Flowers have also a mission quite as beneficent, and yet higher, because addressed to the soul through the senses. They are the types and pledges of God's loving kindness and gracious remembrance. They ever come to us with messages from the Father; they return every year with the old beauty, the old sweetness, as though to assure us that His love dies not, that "His mercy endureth forever." The lowliest wild flower can touch the proudest spirit with longing and devotion, and breathe into the most close and hardened heart a breath of divine hope and faith.

How beautiful and significant is the love of children for flowers! It seems not a mere sensuous delight, the fancy of the eye, but some subtle, spiritual affinity, the kinship of innocence and beauty. The young babe who will take no notice of a gay ribbon or a jewel, will grasp at a flower, with eager, ineffectual clutchings, and down in the misty depths of its eyes you can see, struggling through the chaos of formless thought, an instinct of recognition, love, and joy.

Yesterday, our little daughter came in from her walk, or rather *run*, in the square, bringing me flowers, "herself the fairest flower." In the grey dawn of winter, nearly two years and a half ago, this child came to our arms, brightening all the world for us. A very little life is hers, truly; yet what a host of new, unselfish affections; what tender cares; what plans, resolutions, and aspirations; what solemn duties; what sweet, immortal hopes have come to us in that brief period and cluster around the little creature, whose tender, earnest eyes search into our inmost souls, and humble our hearts before the truth, purity, and love of Heaven. A little life, yet such a life of infant beauty and blessedness, is enough to crown two lives with the only august and sacred majesty of earth—maternity and paternity.

But to return to my little daughter's flowers. They were only a bunch of violets and dandelions, which she had filched (innocent thief) from the grass-plots of the square, usually as jealously guarded by a grim Irish dragon, as the fruits of the Hesperides. She came in, flushed with triumph, holding her trophies aloft in her chubby little hand, her eyes full of exulting joy and eager expectation of the pleasant sensation she was about to create in the parental breasts. She enjoyed that sensation to the utmost, never suspecting, happy creature, the loving affectation of some of our exclamations of admiration and surprise. Ah, what so sad as the conviction that our world-chilled hearts are no longer capable of their early, innocent raptures, their unconscious worship and praise over a simple flower; mute, wayside revelator of our God, "in the beauty of his holiness."

To the child, that little bunch of flowers was a beautiful marvel, an enchanting mystery. For her, the blue eyes of the violets were full of wonder and delight, and the dandelion, that floral sunshine, brightening the grass in the shadiest place, that golden largess of nature, scattered over the earth with princely prodigality, was neither worthless nor common, but a treasure, rich and rare. No miser ever grasped his gold with so sweet a joy as she those little yellow flowers. Ah! they came to her with tidings, with secret messages from the great, tender, motherly heart of nature, and she accepted and understood them all. One sunny Sabbath day, in the early spring, as I was walking with her, we came to a large vacant lot, which is partly overgrown with short, weedy grass. At sight of it, the child pulled away from me and the sidewalk, saying that she wanted "to put her feet in the grass." She ran and danced over the little, sickly spots of green, and eagerly picked some stunted plantain-leaves for flowers. In the child's eyes, that rough waste place was transformed into a beautiful garden, and its poor weeds transfigured into the very flowers of Paradise. Ah! if we could but look upon the world and human life in this way! feel a dearness in the common earth, see beauty in the poorest and most uncultivated being, the grand beauty of that immortality which crowns the human with somewhat of the majesty of the Divine!

I am rejoiced to behold our little daughter's love of flowers; to see that it is a *love*, and not a mere fancy for pretty forms and colors. To her they are living, sensitive creatures; she talks to them softly and caresses them with light, dainty touches. We mean, if our darling stays with us, to foster this tender sentiment; to teach her to reverence, as well as admire flowers; to be content to see, without grasping and so destroying them. The senseless vandalism of most children, when let loose among flowers, is shocking to me. I think children should be taught, that a degree of sacredness belongs to the beautiful lives of plants, and that they should not be needlessly plucked or heedlessly trodden into the dust from which they sprung, at God's call, to brighten this little spot of earth, to gladden some human heart, and to sustain a little world of happy insect life. With me, this feeling has been not so much a sentiment as an instinct. I have ever felt a human sympathy for flowers, and with all the arguments of reason, I have never yet been able to overcome the impression that they have not only a dim, delicious consciousness of life, of sun, and air, and dew; of bloom, fragrance, and beauty, but a painful consciousness of wounding and loss. I never pluck a flower, but I fancy that it shrinks and pales instantly in my hand, and that its companions miss it, and look at me reproachfully. I think I never gathered a bunch of violets in the woods, without a sad feeling of the little void they left in the green solitude.

For a love of flowers, which shall exert a softening and elevating influence on the character of a child, an instinct like this, refined into a sentiment, is needed. Without it, there may be flower-fanciers, but no genuine flower-lovers. A friend lately asked me, which I thought would have "the best moral influence upon the character of a child—a love of music, or a love of flowers." I should say the latter, unquestionably. Music addresses itself more especially to the intellect; flowers appeal directly to the heart. Only the noblest music is elevating, but nearly all flowers are softening and humanizing. It is not difficult to believe the old story of Nero's fondness for music, of his demoniac fiddling amid the burning of Rome; but it is almost impossible to conceive of a tyrant, a human monster, taking delight in the beauty and culture of flowers. To be sure, Robespierre used to wear a bouquet in his button-hole; but it was a crime against nature, in one to whom the smell of human blood was sweeter than all fragrance of flowers. On his breast, over the heart, whose tides ran black with hate and murderous thoughts, they hung those fair types of divine love and purity, like angel faces, half pitiful, half fearful, hovering over the abode of a lost spirit, torturing and tortured.

What kindly and compassionate offices are those of flowers! How they make haste to bridge, with spreading leaves, and trailing vines, and joyous blooms, the rifts and chasms of ruin, to make beautiful destruction and decay! How they spring triumphant from the melancholy dust of battle-fields, turning the wasted blood of heroes into wild poppies and purple anemones, dawning out of the chill, deep night of death, in rosy bloom, in clouds of white daisies and the tender blue of forget-me-not! How quickly they overspread graves—nature's beautiful pall. How they smile up into our tearful eyes, and how eloquently their yearly resurrection reproves us for our little faith in the immortal life! How their sweet breath embalms the memory of our dead, and ascends to Heaven, like the incense of a solemn, perpetual mass for the repose of their dear souls!

I have read of a skillful florist, who formed a dial of flowers, marking all his time by their opening and shutting. Would that we could all have such dials. It seems to me that we then would not dare to waste or desecrate the priceless, blessed hours. The more flowers we have around us the better. I would have children live in the garden, far more than in the school-room. Surely flowers have a certain protective and conserving power. I cannot imagine an enthusiastic boy-florist falling into ways of vice and crime; or a young girl plunging into sin, with the breath of home violets about her. But I have said far more than I intended upon this subject, though less than might be said.

In my last, I made mention of an eminent young clergyman of our city, the Rev. Dudley A. Tyng. Alas, I should have said the *late* Dudley A. Tyng, for he was, even then, dead! He perished, as you perhaps may know, of a frightful accident. He was called to enter upon the life of the blessed, through strange and fearful suffering, which he bore with the heroic resignation of a martyr, and the sweetness of a child. He left many to mourn, not for him, but for themselves, "sorrowing most of all that they should see his face no more." Adieu. GRACE GREENWOOD.

Education of Woman.

THIS all-important theme which is presented to our readers in the following most deeply interesting and valuable communication, we trust will receive that attentive reading and thought which its high import demands. The beautiful simile of the "two flowers," the weaker and delicate one sheltered by the strong and robust one, has been most happily presented as illustrative of man and woman. This, with every type and figure used by our esteemed correspondent, together with her earnest and truthful appeal to mothers and to daughters, it seems to us, must find a ready response in every true heart, and awaken a greater interest in this subject than has been given to it; and we most devoutly hope, that among our many readers, there will come many ready pens to aid on that glorious cause, the *Education of Woman:*

OAK-SHADE FARM, Santa Clara Co., May 11, 1858.

FRIEND FARMER: For such I esteem you to be, as you have enabled me by your liberal notice of my previous expressions about a little flower which gave birth to thoughts, or ideas, to me, of the affinity existing between that and the uncultivated, or wild flower, which I have followed on until I have arrived at something like a starting point; which, perhaps, will take me to greater things (than I am capable of handling or dealing with) or at any rate less so than that of flowers, the culture of which I delight in. I love their cheerful looks about me; I love to read them in their silent teaching; I love to revel in exploring their hidden beauty, and comparing the wisdom displayed in the formation of their minute and lovely proportions, to the same wisdom displayed in the formation of man; and yet further, I go to that of mind, and this brings me to the subject of the Education of Woman. But I wish to begin with her, a child, and go up with her, step by step, until she passes the most perilous period of her life, that period in which she most rapidly forms a character, which she is destined to wear, whether pure or spotted. And I beseech Mothers most especially to follow with me their loved ones, and not fear, but know that it is for them I labor; and I also ask Young Girls to read my communication on this subject. I may be too plain in all I say; I love my sex, reader, let this plead my excuse. I am no flatterer. I write not to please or gain admiration, but desire that what I write may live in the memory, and remain an evergreen in the lives of those who read, as far as I produce that which is worthy to live in the mind. An abiding sense of duty forbids my silence; I shall speak out fearlessly; where I err, some one who is able, I hope will correct, but if they can give nothing better, there is no cause of complaint.

I, this day, plucked a flower from my tender little plant, and examined it minutely with my little magnifying glass; also one of the Lupine. I think the affinity between the two is beyond a doubt, in consequence of one being a male and the other female; therefore, though not of the same kind, there was a sympathetic unity between them, and the weaker derived benefit in being sheltered by the other. I was blessed with the aid of a female friend, while examining those flowers, and I found she derived as much pleasure, and I believe received the same impressions, while engaged in doing so, as I did. I will not attempt to describe all we could see of beauty in their construction, for I could not. I hope others are in the habit of doing as we have done, talked with flowers and learned from them, voiceless as they are, yet capable of filling the mind with conceptions of sublime beauty, wise proportions of elaborating power, so as to fill every fiber with the spirit-life of flowers. They carried me to the cradle of infancy; nay, not so, further back than the cradle of infancy will I go; I said I would be fearless, and I will endeavor to keep my word. Mothers, go with me in the sanctuary of your own souls to that point of time, the embryo state; how much of vanity, or false teaching, or stamp of mind, did you daguerreotype upon your child? or how far did your course mar the lovely proportions or proper balance of the mind, even at so early a stage of its progression, which is to be eternal? O, pause and think, and learn an important lesson by your own reflection, and then go with me to the cradle of the infant female child; it is her education we are going to talk about. I am intending, wisdom aiding my mental powers, prudence and truth directing my mind, to point out some errors in the first lessons this little one receives after its parents receive it as a charge, or sacred deposit; the germ was perfect, but perhaps is already somewhat marred while being clothed in a garment or outer covering. But never mind, this is only mortal; it will die after a while, but the other will live, although it has been marred in putting on a garment or body too small or thin and weak to last long, or hold properly the inner being; when it grows too large for the body it has it will be dropped, and the real being go out to a higher life; and if it was marred it will at last expand and overcome; as it must progress, it must go on. So think some people. It don't matter a great deal whether this is so or not to me; I am not so much concerned about that, as I am that we know how to educate our female babe, at whose cradle we suppose ourselves. The present is a point of time we are teaching in, not the future, for some time yet to be arrived at.

Mothers, how many infants are made restless in mind and body on account of bad management while yet in the cradle; how many are injured in mind and body, by being left to the care of others than the mother, during this period of life! Think you there are no lessons learned, then, by that innocent child? yea, sister, your child is, even then, being impressed, either favorable or otherwise, and if continued they become more and more tangible as the mind enlarges, or is becoming more and more capable of using its powers derived from the Author of its existence. We find our species endowed with qualities of mind for expansion and cultivation; the force or character of mind depends chiefly upon the use, or cultivation, of those qualities. I have found myself in possession of no quality of mind that I have had no occasion for the natural use of, and I have thanked the wise, kind Heavenly Father of my spirit, that he blessed me with those powers of mind, all adapted to my existence in a mortal state. Therefore, I reason thus: in the cradle the voice of nature is heard in cries, often it is the voice of pain, but, we too often, in our ignorance, would stifle it with an anodyne, such as are usually given to infants for this purpose; when perhaps, on account of our being busy, the infant has only been left too long in one position. Here is a two-fold injury inflicted upon the little innocent one, which may perchance follow it through life. I have known not a few such cases. Think you the little one is not then being forced by the necessity of circumstance to exercise its little mind, as well as its physical powers? Ah! says one, a child will cry from instinct. O, yes, and instinct is mind or intelligence as far as it goes, if it is little heeded. A babe may be taught while yet in the cradle, to be restless, irritable and excitable in mind, by its management, and far more so after it is placed in the care of nurses. Mothers, as you value the future happiness of your offspring take heed in whose care you place them, that you may enjoy yourselves in the pleasures of society; you know not the character that is being stamped upon your precious one, by magnetic or sympathetic influence, by those who have the care of it, and take care that it does not grow up unlike its parents in disposition. How many babes in my life, whose mothers were out in company, have I seen in the arms of nurses, almost frantic, while the nurse only irritated it all the more by her ignorance in the efforts she used. Yes, mothers, many have I taken in my arms, and in a few moments they were quiet and happy. I might enlarge here, and give some of my own experience (but I fear already that I shall be compelled to be more lengthy than I expected).

Sisters, our children thus take a few lessons in the way of educating them from nurses, but they may prove to be too well impressed upon the infant's mind to be easily forgotten; her influence, in irritating, may harass the child, in dream, even for years, and we know not the cause of disturbed slumber in the little sufferer; and this is not all of the teaching that is imposed upon children in infancy. No, far from it, and many a smiling babe has been hurried to an untimely departure from this sphere of existence to another, where I, for one, believe it will have nurses who are capacitated by the holy principle of love, united with an experimental education, in order to spirit-development. Some say we should rejoice, but, sisters, I find myself rather inclined to fulfilling with patient endurance our lives here, in this state, to anything premature; there is much here to learn, and love, and do, and if we suffer to know that which is worthy of our love, and to learn what is right and good for mortals to do, we are only the better prepared to enter upon a higher field of action. Some one may say, we know all about these things, please tell us something we don't know. Be very patient with me, dear loved ones of my sex, and you, Fathers, too, and by and by perhaps I will. We will suppose now the child some two or three years of age, capable of giving forth its innocent prattle, though the words are imperfectly spoken—this is now another season during which it is susceptible of very many injurious impressions at the hands of many different teachers; and as it is often the case that the poor little innocent is positively taught to do and say things for which it must in a short time after be corrected, it does seem to me best to teach a child only that you are willing and anxious it should practice. O, how I have felt with and for children, when I have seen them thus dealt with. I will not be tedious in this particular; there are many others I might cite mothers to; they need only think to inform themselves of the many inconsistences we are in the habit of practicing with our little one at such ages. What I desire, mothers, is, that we watch, ourselves, as to what we teach these innocent ones, as well as what others teach them, as well as pray for their welfare in after life; for just as much depends upon the first, as on the last, perhaps more; and next comes another period in the life of childhood in which is allowed a course that is the beginning of wrong wrought out in years yet to be added to the life of childhood. The child we will suppose six, seven, or eight years of age; bear in mind she is a miniature woman, she is going on to that important state of young womanhood; would you wish to see every gentleman that may visit at your house, fondle and kiss your young-women daughters? Beware how you allow such things with your little girls, with those who are not relatives of your family. For the sake of your precious child, beware. She is innocent of any wrong inflicted upon her, but in nine cases out of ten the child is not acted upon for the higher principles of a safely virtuous life; affectional forces of the mind are acted upon that should have remained dormant for years, and she is prematurely susceptible of loving others who fondle her, beside the parents and the home circle. Some may think this is being too careful of our little daughters, but I don't for one. I, as a mother, would prevent every species of acting upon the affectional forces of the child's mind at this age, only towards its relatives and its own sex, and when the proper age comes for her to be properly moved to affection it will spring pure and ennobled, by a pure and holy attraction, crowned with virtuous love; not excited or fed with candy, and small presents, attended with kisses. We will follow the little girl a little further on, in her onward march. She is, in this period, at school. The parents' hopes beat high for her future happiness, her progress in the attainment of an education such as they design for her; and now ye Parents, I mean to talk with both of you; I am going to tell you what with some occurs at this period, though I earnestly hope not with many. I will relate an occurrence that came under my own observation, and I shall say where it was; in San Francisco; just such things occur in other cities, and in other States than California, as well as there.

I had been in the city one day making a few purchases, and when I started for home I concluded that I was walking too much and would take a seat in the omnibus and ride. Just as the driver was starting the horses, a lovely little girl of ten or eleven years, judging from her childlike appearance, came round to the door and stepped in, taking a seat opposite the one I occupied; she held by the hand, I think, a sister, who was, I presume, two years younger. I was much astonished to see the excitement in this beauteous little creature's countenance; I mean the eldest. There was anxiety, expectation, and yet a degree of fear, or a shade of sorrow, would steal over her lovely features; I could not take my eyes off her, but I was not left long to conjecture as to the probable cause of all I read in the countenance of the little stranger. The driver pulled up, the door opened, and a very sprightly young man jumped in. There was joyousness in the eyes of each, as he sat down by the eldest. "O," said she, "I had forgotten the street, and was afraid I should miss you; did you wait long?" "No," said he, "what kept you?" The child blushed crimson as she answered, "I could not get away until I begged ma to take a walk, and then I had to take her with me after all," pointing to the younger one. There had been an Examination at some of the public schools that day, and they had been there, I found out, from a few words passed in flattery to her. The young man took out a parcel of candy for her; they made an arrangement, in few words, to go somewhere, but where I do not know. She spoke of her mother ever getting to know of what she was going to do. They asked the little one if she would stay at a house we were passing. She said yes. They got out, and knocked at the door; she was shoved in by the other one, then, walking on fast, I saw her overtake the young man, who had walked on to the corner. I lost sight of them. All had passed in a brief space of time. I had seen and heard enough to satisfy myself that she was perhaps innocently taking a false step; how my mind went out after that child. I knew nothing about them; the world would have branded me as officious, but were anything of the kind to come under my notice now, I would unflinchingly follow that child until she was with her friends, and warn them in relation to the course she was acting. As it was, then, I could only ask in my heart that some "angel spirit" might watch over her and save her. The man was old enough to be a villain, and I thought him one. I judged him by the language I heard him use to that little girl. Had he been one of her schoolmates I might have thought differently of his flattery, and therefore placed a different estimate upon his character; but he was a man, and I was capable of knowing the positive magnetic influence he was exerting over that child. His superiority in age gave him power, it was with him to exert that power for good or evil, just as his mind inclined him.

I thank heaven that I, through life, have found in my pilgrimage, no man disposed to trifle with me. I entered upon the life of woman with exalted ideas of man; I had been treated as a sister and friend by all, and I now know that a man who is above stooping to deceive or lead astray the young of my sex, is precious, and of inestimable worth to our world; they are the heaven-made nobility of earth. The others are clothed with a garment of fig-leaves, the covering of falsehood and deception. I trust the time will come when they will be known by the young of my sex, by some mark set upon them by fathers and brothers, and lovers of female purity.

And now, let me say a few words to the little girl, and ask her, always to bear in mind, that an individual who would lead or encourage her to deceive her mother, or weaken the confidence that should always exist between mothers and their daughters, is a monster by deception; and will, if not prevented by some power to save her, prove what I say, by betraying and leading her far from the sphere of innocence and happiness. I pray for the ushering in of that happy morn, when man shall stand forth in his manhood as a wedge of gold, seven times purified; the redemption of woman from flattery and seduction will then be hailed with a new song on earth; freedom, freedom, in all periods in her earth-life, with no betrayer to shun or dread.

As my communication is already frightful in length, I will continue at another time in a future one. N. B. H.

EDUCATIONAL.

The Collegiate Institute at Benicia, Cal.

THE School Year at this Institution, is divided into two terms of five months each. The Sessions will open on the 4th of January and the 5th of July; closing on the 4th of June and December.

To the Patrons of the Institute we would say, that the facilities for obtaining a good education have been much increased this year. The range of studies will be ample, embracing the Ancient and Modern Languages, and a thorough course in the Physical Sciences. Neither are the accomplishments overlooked: in Piano and Vocal Music, we have the best Teachers in the State Thoroughness in the Elementary Branches, before advancing into the higher studies, will be a primary requirement. We shall continue to follow, in our government, school arrangements and method of instruction, the Normal School or Prussian system, which has been adopted in the Eastern States with so much success.

Pupils will be fitted for the University, or will be trained with a view to the completion of their education in this School, as may be requested by the parents. Where no special directions are given, the course of the Institution will regard the Modern Languages, Natural Sciences and Practical Avocations of life, as the sine qua non of a good education, and the Ancient Languages as accomplishments.

A daily account of recitations and deportment will be kept and sent monthly to parents.

The location of the School is easy of access from all parts of the State; the buildings are excellent; and the quietness and healthfulness of the village are unsurpassed by any place on the Pacific.

TERMS, PAYABLE QUARTERLY IN ADVANCE:

	PER MONTH.
Tuition in the Higher English Studies (including Natural Philosophy, Chemistry, Algebra, Geometry, &c,-	$ 8 00

J.L. POLHEMUS
DRUGGIST

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh,
SACRAMENTO, CAL

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for
Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.
I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valuable articles:
Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.
Budds' Nerve and Bone Liniment, warranted the best in California.
Flower of the West, for Fever and Ague.
Delight's Spanish Lustral, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.
v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED
GERMAN BITTERS,
PREPARED BY
Dr. C. M. JACKSON, Philadelphia, Pa.,
WILL EFFECTUALLY CURE
LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Flattering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Flattering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flashes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

STRAWBERRIES AND RASPBERRIES.—That blessed individual, George Law—not Live-Oak George—introduced a big basket of strawberries and raspberries into the News office, yesterday. They were from George H. Beach's farm, and, of course, were exquisite. The strawberries were of the variety called British Queen, and it was with a terrible struggle with conscience, as we are all members of the California Party and essentially democratic in our principles, that we forced ourselves to such homage to royalty, as to touch a British Queen with our lips. But we did, and our scruples of conscience and the strawberries were swallowed together.

We clip the above from the Marysville News, and the friends of the excellent editor of that paper will see the face of Gen. Allen grow bright with his genial smile, after he has paid his *devoirs* to the British Queen, with his *tulips* (two-lips). Talk of scruples of conscience, General, after so many years of political life. O, fie! we don't believe you would hesitate long to salute such an object of taste and beauty, whether it was the rich cheek of a British Queen or the Princess of Orleans, both delicious for lip service. We don't believe any *Law* would stand in your way, you would run your craft upon the "Beach," any time, for such a chance. We ourselves the present week, can attest to the excellence of the chance you had, General. We noticed how happy you appeared in your sanctum.

NEW APPOINTMENTS.—The President has sent to the Senate for confirmation, the following appointments:

Wm. Baker and Ed. Hart, Register and Receiver at Visalia, Tulare county, California.

A. C. Bradford and W. B. Norman, Register and Receiver at Stockton, San Joaquin county.

Wm. McDaniel and Geo. W. Hook, Register and Receiver at Humboldt.

William B. Dameron has been nominated for Surveyor of the port of San Francisco, and J. R. Hardenbergh for Postmaster at Sacramento city.

THE FIGHT WITH THE INDIANS.—The following extract from a letter, dated Port Townsend, May 28, confirms the previous accounts of the battle between the U.S. troops and Indians:

"Col. Steptoe had a fight at Walla Walla, a short time since, in which five men and three officers were killed, fifteen men were wounded, and one man missing. This is the extent of the loss. His howitzers, wagons and pack trains, were saved."

It is stated that troops will be sent to Oregon from this State, forthwith, and that General Clarke will himself proceed by the first steamer to the seat of war.

WE have no hesitation in saying that Consumption can always be alleviated, and in a great many cases completely cured, simply by the use of Dr. Wistar's Wild Cherry Balsam. Its soothing and healing influence over the diseased organs is truly wonderful. None genuine unless signed I. Butts, on the wrapper.

LINDSEY'S

Double Acting Rotary Force Pump.

THIS is a new Pump, patented in America and England in 1855; and for Cisterns, Wells, Mines, Engines, Railroads, &c., has no rival: in that it works easier at great depths, discharges water at different hights, can be used for a hose, is made entirely of wrought and cast iron, without suction or packing, simple in construction, easily put in, not likely to get out of order, will last for an age, and is cheaper than any other Pump. It has a wrought iron pipe, side gearing and balance wheels, with everything complete to raise water by hand, from one to one hundred feet; and costs, boxed and shipped, from $18 to $60.

It must stand in the water, and will not rust.

Drawings and a full description sent to all parts of the world, free of postage, by addressing the general agent.

JAMES M. EDNEY, 56 John street, New York City.

HOTELS, &c.

MERCHANTS' HOTEL, *MARYSVILLE.*

THIS OLD ESTABLISED HOUSE, in order to meet the demand upon its increasing business, has recently been enlarged by the addition of a number of NEW AND ELEGANT FAMILY ROOMS, a new Promenade Gallery of Two Hundred Feet in length, and has been otherwise renovated and improved, making it one of the largest and most commodious, as it always has been the most quiet and orderly Hotels in the country.

The Proprietor, in returning thanks to the Merchants, Business Men and Citizens of Marysville, and to a large portion of the Traveling Public for their generous patronage, assures them that no pains or expense will be spared to make this permanently, in all that constitutes a First-class Hotel, the best in the city.

The Merchants' Hotel employs no runners. It is located on First street, near the New Bridge, on the Yuba river, where the Proprietor (always on hand), will attend personally to the wants of his customers, and hopes and expects the same liberal patronage the House has always received from a discriminating public.

Rhymes for the Times.

NUMBER III.

MISS LECOMPTON KANSAS.

The President is a good old man,
As ever filled his chair before,
The President does as well as he can,
And where is the man that can do any more?

One night, when he thought his work was done,
While puffing his pipe quite lustily,
Well pleased that things went so smoothly on,
And none in the land so loved as he,

There came a knock to the White House gate,
And the porter answereth the call with haste,
When he found a lady, though it was late,
Who craved admission among the rest

Of those who under the President's care
Were housed, and fed, and treated kindly,
And wished him to say that a maiden fair,
A virgin pure, should be taken blindly.

Said some kind folks, "Let the lady come in;"
While others said, "Keep the lady out;
It would be a shame, it would be a sin,
Her character hangs too much in doubt."

Her dress was draggled above the knee,
Her bonnet was rumpled, and so was her hair;
Her manners appeared a little too free,
And her face was brazen, though it was fair.

"Would you admit," said the strait-laced dames,
"A common tramper such as this?
We do not wish to call her names,
But well knows every one what she is."

"I know very well," our President said;
"Let nobody think of me so low
That I do not discern she's an arrant jade,
But that, you know, I've not right to know."

"No right to fiddlesticks!" cried the crowd,
Who began to gather around the door,
And from speaking low, they spoke aloud,
"Was President ever so foolish before?"

He heard their words, and soon he said,
"What means so much commotion, now?
If, when she is in, ye think this maid
Not good enough, or her manners low,

You free-spoken folks, with so much to say,
Can give her lessons, and change her mind;
So let all who have dined with me to-day
Vote the lady in, and go it blind."

Some said "All right," some said "All froth,"
And votes were hung in equal scale;
And we wait to see what kind of broth
They make of the President's runty kale.

AGRICOLA.

MILLERTON, May 20th, 1858.

The Columbia Gage Plum.

WE give, this week, a cut of this Plum, and copy from Downing the following description: Raised by L. U. Lawrence, Hudson, New York. Tree vigorous, productive, but subject to rot. [This is caused, it should be remembered, by the rains and moisture of the seasons there; our dry climate will bring this Plum to perfection. ED. FARMER.] Fruit of the largest size, six or seven inches in circumference, nearly globular, one half rather larger than the other. Skin browish purple, dotted with numerous fawn-colored specks, and covered with much blue bloom, through which appears a reddish brown tint on the shaded side. Stalk about an inch long, rather stout, inserted in a narrow, small cavity. Flesh orange, not very juicy, but when at full maturity, very rich, sugary and excellent; it separates freely from the stone, except a little on the edge. The stone is quite small and compressed. Last of August.

A New Six-row Barley.

When at Marysville, we were informed by one of our subscribers, the result of his planting this new barley. Mr. John Adriance, on the Long-Bar road, above Zabriske's, planted one grain of this barley in 1855, the product was 32 heads; these were again planted in 1856, and they produced 105 pounds; this product was planted again in 1857, and the crop harvested 105 bushels; the present year, the amount sowed was *eighty acres*, and we shall soon hear of the grand result. This is a handsome increase from *one grain*, a field of *eighty acres* the *fourth year*.

FINE AUSTRALIAN SHEEP.—We again call the attention of our readers to the large lot of fine Australian sheep advertised in our columns. We have examined their fleeces; they are of a very high grade, and worthy the special attention of all purchasers. It is a self-evident fact that California is destined to be a great wool-producing country, and breeds of sheep like these now advertised should not remain long without purchasers. We refer again to the advertisement of these sheep.

[From our New York Correspondent.]

To the Citizens of California.

It is well known that Capt. Randall has been many years maturing a new and important discovery in the propulsion of steamships—having been for thirty years engaged in steamships or boats in almost every capacity, from a cabin boy and cook, up to the engineers' department, and then became the builder and commander of his own steamer. In all these departments he has had ample opportunity to witness the practical workings of the best constructed engines, and to note the difference in the speed of various models, and also to judge thoroughly and accurately of the comparative safety of most of the steamers upon our American waters by his own personal observation.

Having built steamers himself, and suggested many of the most important improvements made in the Pacific Steamship Company's ships, he has, at each step of his progress, gathered many important facts and data upon which to base his calculations. He has made his way, step by step, after long and patient study, extensive and varied research, and long-continued and close investigation of the natural laws applicable to steam as a motive power. At every stage of his researches the fact that the use of steam, as applied to propulsion of vessels, was yet in its infancy, became more and more apparent. He was convinced that steamships of large size and light draught, built after new and improved models, and engines constructed with all the scientific combination of the latest and most important improvements, could be built so as to secure the greatest speed and safety. The next step, in his progress, was to fix upon a plan to render these ships safe as well as swift. The great size of the ships required far greater precaution than those upon other lines, not half the size. After much study, planning and experimenting, he succeeded in devising a new and important method of bracing and trussing, for which he has secured letters patent. This is pronounced by the most scientific men, and the most experienced captains and engineers in this country and Europe, to be far ahead of anything ever brought before the public.

Another new and important arrangement was the placing of two powerful engines, acting independently of each other, each driving a pair of wheels. If one engine breaks down entirely, the other with a pair of wheels will propel the ship fifteen or sixteen miles per hour.

All of this planning cost many years of unremitting toil; but, when completed, there was yet another point to be considered. He was anxious to form a Company on such a basis as would be the greatest benefit to the greatest number. It was determined to accord to each holder of one share of $250 the privilege of a second cabin passage, between New York and San Francisco, once during every year of the Company's existence; or, if they did not wish to go, they might sell the coupons attached to the certificate of stock. These can be sold or sent to any part of the world where this Company is known, or where it has an office, and be just as good as gold for freight or passage. Many living in California would thus be able to send for their families without feeling the expense, and with a feeling of security, now unknown, when our friends are on the ocean; for, it is believed, that no sea vessels have ever been constructed that combined so much speed, strength and safety.

It was in California that he completed his plans, and began to feel that the commencement of this line would immeasurably enhance the real prosperity of our State. He had long been painfully impressed with the fact that but a few thousands were added to our population each year, and these were mostly from the plains. The steamers carried from us just about as many as they brought. The wish for some cheaper, more safe and expeditious means of conveyance between New York and San Francisco, was everywhere expressed. The time occupied in going from New York to San Francisco was from twenty-five to thirty days. Six steamers, believed perfectly safe, were burned or wrecked upon the Pacific coast, many lives had been lost, and millions of property destroyed. Thousands were kept from the State, solely on account of the insecurity of life and property during the voyage, and others, who were willing to risk both, could not pay their enormous charges for passage. Those wishing to send for friends or families could not, even if they were willing to come. This state of things caused a feeling of despondency to settle down upon many hopeful hearts. It cost almost a fortune to send for a family, and the charge for transportation of merchandise and stock was enormous and is now. The *two* lines were not sufficient to meet the demand for freight and passage, even at their ruinous rates.

In view of all of these facts, he determined to offer all the superior advantages to be introduced into this new line, to Californians first. Every true friend of the State rejoiced at the prospect of a speedy change. The masses were in its favor. An informal organization of a Company took place. The details of the whole plan were laid before them, illustrated and explained. Its practical workings were demonstrated, its benefits to the entire State were clearly set forth. All believed the money needed to carry forward this enterprise could be secured without difficulty. Even the most timid fully believed that a little exertion on the part of its friends would insure success. It was deemed best for him to come to New York to ascertain how much each steamship would cost, and that the estimates of the builders should be before them, as data, to guide them in their action; and that the money should be raised and paid in as fast as it would be needed here, to carry on the work to the best advantage. With

COLUMBIAN GAGE PLUM.

this explicit understanding he came here, and at once began his work, and succeeded in getting responsible parties to undertake the building, at a rate less than the estimate he made before leaving home; and found, furthermore, that the builders would be glad to take from fifty to seventy-five thousand dollars on each ship. He, therefore, in accordance to the suggestions from the gentlemen who were to manage the interests of the line there, and to form a Company with a capital of one million of dollars, made arrangements to begin the work forthwith, engaged a large portion of the timber, secured a suitable shipyard, and had some $40,000 worth of lumber delivered on the yard. Knowing that the interest in this new line was wide-spread and permanent throughout the whole State, and fully believing that nearly every man, if approached in the right way, would be glad to have one or more shares, and fully believing that the money would be forthcoming, he based his action upon this belief. Immediately after the Company formed was in operation, the money panic came on, and all our work, so well begun, was suspended.

This, of course, placed him in an unpleasant position in relation to his pecuniary engagements, though those engagements were not binding until after they had received the official sanction of the Company in California. The steamers could have been built here without any aid from California, but the primary object he had in view was to benefit his adopted State, and his great ambition was to secure a large immigration into that State. Hoping that the people would rally again and carry out the enterprise according to its original design, he has long withstood all proffers of assistance here, very much to his personal and pecuniary disadvantage.

The loss of the Central America aroused the public mind here upon the great importance of *safer* steamers, where so many precious lives depended upon the safety of the ship. He still waited to see the effect that that terrible disaster would produce upon the public mind there. To his surprise and that of every other person who knew the feeling that had long existed there towards the old companies—the fierce invectives hurled against those companies, soon quietly died away, and the people appear to have settled down to bear the wrongs inflicted upon them and the State by the old monopolies, as best they can, and really appear to have made up their minds to pay them half a million per month, to help ruin the State. His plans and drawings have received the sanction of the greatest steamship men in the world. He has already built some of the fastest ships upon the western lakes, and been connected with the fastest ocean steamer ever built, and one of the fastest steamships that ever left the port of New York,—and these will be of far greater speed than any ever yet built. He has urged the people, then, to come forward and take hold of this matter, assuring them, if they became dissatisfied with their stock, he would find purchasers for every dollar they might hold, at a fair premium. Again and again has the immense advantage of this line to the whole people, been sent forth through the press, and after spending over one year from the time his arrangements for building were completed, hoping and expecting that you would see that it would be for your own personal interests to carry this work forward, and finding that no reliable action has been taken on the subject, and from present indications fearing there will not be any, until a real beginning has been made here, such as will be a sure guarantee that it will go forward, he has deemed it necessary to take such steps as would secure immediately the object he had in view. To do this, it has become necessary to re-arrange his whole plan, to meet the new exigencies that have arisen. The capital is increased to two millions, and the line is to extend from Europe, by New York, to California. Five Directors are to reside in this city, and ten in California. You will have the privilege of taking all the stock you may desire, provided it be done immediately, for all that remains after Californians have had a chance, will be taken at once in this city, and the ships be forthwith commenced.

Citizens of California, these steamers *will be built*, and by far the larger portion of all the profits *may* go into your pockets, if you will it; or if you stand aloof, others will reap the reward that he sincerely wished you to secure. He feels assured that you will all be willing to admit that he has waited for you, to lead off in this grand enterprise, far longer than any could reasonably expect him to do. Life is too short and precious, the vital interests at stake are too far-reaching and momentous, to justify delay on his part, or to warrant you to expect him, single handed, to carry forward the work. He trusts, therefore, that you will be willing to join with New York, the Empire State of the East, and the Golden State of the West, with their united energy and skill thus acting in concert, can and will revolutionize the whole steamship business of the world. The present insecure and perilous mode of travel has already been to long.

It is surely high time that this wholesale slaughter of our fellow citizens should cease; there is too much scientific attainment, too much practical knowledge, and too much experience among our citizens, to justify the present insecure, slow and tedious method of traveling. Why should improvements be made in every other department of human enterprise, and none in this one, more important than all the others combined, inasmuch as human life is the sacrifice. Every precaution should be taken, every guard suggested by human experience, approved by the masses, should be thrown around those whose business or pleasure may require them to travel by sea.

He does not claim that his plan is perfect in every particular; but he does claim that human skill and energy should not remain stationary, but impelled onward by energy and perseverance, should improve upon all that is passed, grasp, combine and systematize recent discoveries in science. But he does claim to have made a great advance in the model, structure, speed, safety and strength of steamships. This improvement, the result of thirty years study, he wishes the citizens of his adopted State to present to the world. It will cost but one million of dollars to put these steamers in operation. Every year of their existence they will put double that sum into your pockets, besides the vast immigration it will send to your shores. The time for this to be done by you, will soon pass away, and when gone, if not improved by you, the loss to your individual interests cannot be easily made up. But so far as his own personal interest is concerned, it will be immaterial whether New York or California capital does the work. It must and will be done, and those who furnish the means will reap the full, rich and permanent reward.

It was his misfortune to lose the Yankee Blade, by reason of powerful magnets taken on board to wreck the ship, and then plunder the passengers, and seize the specie and valuables. This is the first accident that has happened to him in all his life; besides, better men, with longer experience, have lost ships, and will do it again. But even this great disaster was of great practical use to him, by seeing that noble ship go to pieces. He saw, at a glance, the many fundamental errors in the method of constructing steamships. He is fully persuaded that the sad experience of those short hours in the breaking up of that vessel, will be the means of saving many precious lives of those who travel by steam, in all future time. Some of the most valuable of his improvements were suggested by witnessing that fearful wreck, which could not have been taught or learned under any other circumstances.

He will not command any of the ships. The ablest and most experienced Captains of the world will be placed in them, for it is determined that this shall be the model line of the age. He feels that the time has arrived when it becomes his imperative duty in justice to himself, to his family, from whom he has been long separated, to the best interests of the State, and to the imperious and all-commanding voice of suffering humanity, to push forward this great work with all the energy and vigor himself and his friends can command. He has, therefore, fully completed his arrangements to build the ships with New York capital; still, he is anxious for you all to take as much stock as you can, but it will necessarily be controlled by New York, as the larger part of the capital will be held there. He has waited one year, and more, for Californians to lead in this matter, and they have decided not to do it. He is not one to quail before any difficulties, or to turn back from an enterprise fraught with so many blessings to the people of every land, and destined to produce an entire change in the steamship business of the world.

I respectfully submit the above candid statements to your serious consideration, and ask you to ponder well the facts set forth, and determine at once what your duty is in the premises. I cannot close this communication, I fear already too long, without expressing my high gratification that many of the most prominent and high-minded citizens of the State are becoming so deeply interested in this great work, and it is cheering to know that such men as Gov. Weller, the Hon. J. W. McDougal, late M. C., and the Hon. D. C. Broderick, Senator from California, are doing much to forward this cause. The people will honor and reward such men. All honor to those, heartily engaged in the good work there, in the midst of so many difficulties, and against such untiring opposition.

Be assured, Capt. Randall will do his duty. He is a host in himself; he holds the elements of success in his own hands; the stronger the opposition, the greater will be his triumph. His path of duty is plainly marked out before him. No man or set of men can turn him aside from what he knows to be right, or buy him off. Those ships I have written of so frequently, *must be, will be built*, and by Capt. Randall, if he lives and has his health eighteen months longer.

B.

Willard's Seed-sower in Oregon.

WE copy the following testimony of this valuable Grain-sowing machine, from the Pacific Christian Advocate, published at Portland, Oregon, and we rejoice to know a trial has been made there, as we believe this implement will become the universal favorite the coming season; in fact, the proprietors had already secured orders for fifty implements, before the trial at Oregon, and by last mail orders came for fifteen more. Since the trial at Napa, improvements have been going on in the running gear which causes the reverse motion for the harrow; and since the trial at Oregon, this part has been perfected. The chain that passed from the wheel and gave motion to the harrow, has been removed, and cast-iron cog wheels inserted in its place, by this means a perfectly strong and steady motion has been given to the harrow, and at the same time an easier movement to the machine; the improvement is one of very great value, making the thing almost perfect. These cog-wheels are shielded by iron casings to prevent clogging, and the whole movement has been improved.

This Seed-sower will be found of very great value also to all persons who intend to put in the Alfalfa, in fact, it is the very thing for sowing this seed.

Having examined this most important implement the past week, at the manufactory; having seen it operate, and having witnessed its practical effect as well as receiving the approving testimony of practical men, we feel it a duty to urge grain-growers to go to the workshop and see the machine, that will convince them most surely. Dr. Henry Hewett, the gentleman who introduced this patent into California, has associated himself with Messrs. Hobbs, Gilmore & Co., gentlemen most favorably known to the community, and they have erected a spacious manufactory on Market street, in this city, where these machines will be made; thus giving the value of their construction to our own workmen. As we aim to do all in our power to promote *home industry*, we refer to the advertisements of these firms, and urge all interested to go and see the works for themselves. We herewith present the statement from Oregon:

TRIAL OF AGRICULTURAL IMPLEMENTS,
TUALATIN PLAINS, May 12, 1858.

Mr. Editor: Having been invited by Messrs. Hull, Knapp & Co. to witness a trial of Willard's Patent Seed-sower and Harrowing Machine, recently imported by them, we take pleasure in saying that we are highly gratified with the result, and after witnessing the operation for several hours in *hard, lumpy* land, we are convinced that it is perfectly adapted to our wants, and as a labor-saving machine must take first rank among the implements of the farmer.

We are fully convinced that it scatters the seed evenly over the surface, covering it thoroughly, and completely pulverizing the soil, and doing its work better by once passing over the ground, than the common harrow by several repeated applications. In point of real merit, we believe it equal to all that is claimed for it in the advertisements and circulars. In this country, where labor is so dear, it will prove a great desideratum.

The Reapers and Thrashers lately introduced have enabled us to harvest and secure large crops of grain; and now, with this machine, *three-fourths* of the labor is saved heretofore required for sowing and harrowing.

Just think, Mr. Editor, of a man sitting up in a buggy, behind a pair of horses, driving over his field, and sowing and harrowing in from fifteen to twenty acres per day, in a manner every way superior to the old method; or, put a boy on the seat old enough to manage the team, and he can perform the same labor as well as a man, and you have a very fair idea of its capability.

The machine will speak for itself. We want one, and so will every farmer who sees it operate. Respectfully, &c., M. M. Bennett,
Hiram Wilbur, A. L. Coat,
H. L. Zachary, Wm. Everson.

TALL RYE.—What a misnomer is that same ranch that the Placerville Register talks about as raising rye *eight feet high*—calls it "Hard-times Ranch." It must be mighty hard times indeed there, if they have many acres of such rye to harvest; i. e. hard work to harvest it we suppose. If in hot weather, the owner would make wry faces while he sweats down his crop.

Secrets of the American Horse Tamer.

The Buffalo Advertiser intimates that it is cognizant of the peculiar secret possessed by Mr. Rarey, the celebrated horse tamer, now in England, and employed so successfully by him in subjugating the most vicious and unruly of the equine species. The principle, it is thought, is doubtless the same as that now in use by horse breeders and horse trainers in various parts of the country, and consists mainly in kind treatment, in subduing the fears of the animal, and accustoming him to unusual noises and objects. But there are other influences, somewhat of a mesmeric character, and employed as adjuncts, that go to insure the more complete success of the horse tamer, such as caresses, the use of drugs agreeable to the horse, scratching in parts not easily reached by the animal itself, giving food or water after long abstinence has occasioned hunger or thirst, the use of various tones of the human voice, &c.

The chief secret, however, according to the Advertiser, which paper has the authority for its statement from those who understand and practice the art, consists in "raising one of the fore feet of the horse, doubling the knee and keeping a strap around the fetlock, fastening the foot close to the arm or shoulder. The horse then stands upon three legs. Having next put on a surcingle, pass a long strap or rein through the surcingle, and fastening one end of it around the fetlock of the other fore foot, attach the other to the surcingle after the animal is thrown, so closely as to deprive it of the use of the limb. In this item the treatment may be varied by fastening the second fetlock to the arm or shoulder after the animal is down."

This plan, says the Advertiser, is successfully pursued by many skillful horse breakers in Western New York, and the horse yields to the necessities of the case—his spirit of opposition is broken.

We give place to the above that it may elicit a proper attention to the training of the horse in California. We have a *native* stock of horses of great value, by reason of their powers of endurance as evinced by recent trials; and these animals, if properly broken and trained, will be of great service.

While at Napa we visited the Franklin Ranch of Nicols & Son, and we witnessed the same plan of controlling a horse that was almost unconquerable until this method was adopted. Young Mr. Nichols completely subdued the animal, then saddled him, and, when mounted, swung a blanket across his head, beneath him, over and around him, but he did not mind this, and was perfectly subdued. He then rode him off several miles like a usual saddle horse. We have full faith in the plan.

Horse Taming.

Mr. Rarey's extraordinary performances appear to have brought to light numerous horse tamers in the United States as well as in Great Britain. The following is from the Middletown (Conn.) Constitution, of March 24:

We witnessed, last week, on Friday, a successful attempt to tame a wild young horse by Mr. J. Reynolds. It was at the barn of Dr. Casey. The horse belonged to Charles R. Alsop, Esq., of this city. It was a sorrel, four years old, and never had been rode or driven. It was a high-strung, mettlesome horse, and entirely unmanageable in the hands of a stranger. How any man could undertake to "tame" such an animal within less than six months was a mystery. But the horse tamer took him in hand, and, without the use of any drug or chloroform, or anything of the sort, within two hours he made him as steady as any old farm-horse. He rode him, and drove him without any difficulty, and, in fact, could not provoke him into a kick. The horse was completely subdued. And not only was he perfectly gentle in Mr. Reynold's hands, but in the hands of any one else, Mr. R. says he will always remain so. He made the horse lie down at his command, and follow at his call. He rattled a tin pan around his ears, trundled a wheelbarrow around him, got on his back, and suddenly spread an umbrella over his head. The horse did not appear to be disturbed in the least by any of these operations. This is a wonderful instance of the power of man over the brute.

Ailanthus Tree.—We notice that some *ignoramus* has been recommending, in the N. Y. Tribune, the *ailanthus* tree, as profitable and and suitable for wood, timber, and forest planting. We grew the ailanthus many years on Long Island, and we profess to understand its qualities. As for wood for fuel, or for timber, it is utterly *worthless*, and if any man should be so silly as to plant a forest of it, the owners of adjoining lands would be inclined to lynch him, on account of the seed from the trees spreading at a distance by the winds, from which sprouts are constantly springing up. This tree will not flourish at all in a clayey soil, nor where the weather in winter causes the thermometer to fall often below zero. We will venture to say that the writer of the article in the Tribune knew nothing of the character of this tree, beyond the fact, that it flourishes in and about New York, makes a good shade, and grows rapidly.—[Rural American.

"Lay on Macduff," until you shall exterminate this offensive tree from every spot but the highway; there it may do. We hope every nurseryman in California will cease recommending this obnoxious tree, until it is driven out of every inclosure. We have a thousand trees far better.

The Age of our Race.—The surface of the earth to the depth of some eight or ten miles, is composed of rocks. These rocks are full of the remains of animals and plants. Thirty thousand species of them, which differ from any living species, have been disinterred, yet no human remains are found among them until the loose soil—alluvium—is reached, which soil is universally acknowledged to be of recent origin. The remains of other animals are found several thousand feet below the surface, while the fossil remains of man have never been found so low as one hundred feet below the surface. But if man had been in existence when other animals lived, whose remains are found at such depths, his remains also would have been found there, for his bones are of the same structure as theirs, and consequently no less likely to resist destruction.

Dull Tools.—"Frank," says one student to another, whom he caught swinging a scythe most lustily in a field of stout herds-grass, "what makes you work for a living? A fellow with your talent and ability should not be caught engaged in manual labor. I mean to get my living by my wits." "Well, Bill, you can work with duller tools than I can!"

ADAM AND EVE.

No more beautiful lesson has been taught by a modern poet, than in these stanzas by Whittier. Adam and Eve, exiled from the Garden, had sat down disconsolately on the outer side of the wall of Paradise, and there an Angel found them bewailing their fate. Thereupon the radiant presence spoke:

"Arise!" he said, "why look behind
When hope is all before,
And patient hand and willing mind
Your loss may yet restore?

"I leave with you a spell whose power
Can make the desert glad,
And call around you fruit and flower,
As fair as Eden had.

"I clothe your hands with power to lift
The curse from off your soil;
Your very doom shall seem a gift,
Your loss a gain through Toil.

"Go, cheerful as yon humming bees
To labor as to play,"—
While gleaming over Eden's trees,
The Angel passed away.

The pilgrims of the world went forth
Obedient to the word,
And found where'er they tilled the earth,
A garden of the Lord!

Once more, oh, white-winged Angel, stand,
Where man still pines and grieves,
And lead through Toil to Eden-land,
New Adams and new Eves!

Splendid Blood Stock.

Samuel Thorne, of Thornedale, New York, has done great service to the United States by importing some of the best blood stock of Europe, and scattering it over the country. The Ohio Farmer mentions the sales by Mr. Thorne, recently, of the following high cost animals:

Shorthorn Bull for Cuyahoga.—Raw Jackson, of this county, has purchased a superior young shorthorn bull, "Inca," from Samuel Thorne, of Duchess county, N. Y. Inca is a roan, and was calved July 7, 1857. Sired by imported Duke of Gloster (11,382). Dam imported Iris, by Louis D'or (9,336). G. Dam Lady Love, by Lord Warden (7,167), &c. Those interested can trace out the pedigree through the English Herd Book.

Iris, the mother of this calf, gained the first prize at Banff, Scotland, in 1851, and the first prize at Aberdeen, in 1852. She also took the first prize at the United States Show, held at Boston, in October, 1855. The sire, Duke of Gloster, was bred by Earl Ducie, and purchased at the great Ducie Sale, in 1853, by Messrs. Morris and Becar of New York, as the best male animal of the sale. He was sired by Grand Duke (10,284).

Mr. Jackson is a superior judge of Shorthorns, and, we believe, that Inca satisfies him.

Samuel Thorne, in addition to this sale of Inca to Raw Jackson of Ohio, has sold the bull Argyle, got by Second Grand Duke, to G. W. Coffin of Duchess county, New York. The cows, Cypress and Constance, to A. H. Beach of Merwinsville, Conn; and Lady Millicent, to J. H. Thomas, of Vermont. These cows are all imported. We understand that Mr. Thorne has no other male animals for sale. Mr. Jackson, our neighbor, who purchased Inca, says that Mr. Thorne has twelve head of three-year-old heifers, the best lot he ever saw in America, and five yearlings quite as good. His favorite is "Miss Butterfly," sired by the celebrated "Master Butterfly," roan, calved August, 1855. Among the cows, he admired Lalla Rookh; Darlington 6; Maid of Oxford; Frederica; Bloom; Duchess 66; Duchess 64, and Victoria 26.

Convention of Agricultural Editors.

New York, May 8, 1858.

Dear Sir: Acting in behalf of several gentlemen interested in Agricultural and Horticultural improvement, I sent to the Editors of the Agricultural Press, a month since, a Circular, merely *suggesting* the propriety of a Convention of Agricultural Editors. With one, or at most, two exceptions, so far as I have learned, the proposition has met with very cordial approval. Several points have been indicated, and also sundry seasons named as most convenient. The majority have named New York City, and June or July; but the great distance at which we are severally located, renders mutual consultation impossible, and the few here who were interested in proposing the matter, do not feel warranted in calling such a Convention upon their own responsibility. For ourselves we would even prefer to go to Rochester, or Cleveland, which points have been named by several journals—if either of those places will accommodate the greatest number.

From the impracticability of getting together persons enough to issue an authentic call for a Convention in June or July, another plan has just been suggested which is submitted for your consideration, with a request that you will send your opinion thereon by an early mail, and at the same time suggest any other plan, or if you deem better, please name definitely your choice of time and place for a meeting in June or July.

The plan now proposed, is this: To defer calling a formal Convention for the present, but to invite as many Agricultural and Horticultural Editors as possible to be present at the next meeting of the *American Pomological Society*, September 14, at which time they can get together and organize, transact any necessary preliminary business—in short hold a Convention, and adjourn to any future time and place that may then be agreed upon. Extensive arrangements are in progress to make the next meeting of the Pomological Society an unusually interesting one, and it will doubtless call together many members of the Press in any case, while many others would gladly embrace the opportunity of attending the Pomological meeting, and at the same time meet their "brethren of the quill." Respectfully, your co-laborer,

— Orange Judd.

We cheerfully give place to the above Circular, having given the former one to our readers, and hope this last suggestion will be carried out and a large delegation be present at the sittings of the Pomological Convention. This we esteem the best time and place, as at this Convention all Editors can gather very important facts upon Pomological Science for their several journals; and at this Convention a time and place can be fixed to which the Editorial Convention shall adjourn. We hope our editorial brethren will take measures to build the Pacific Railroad, so that we can go to them, or they come to us.

[For the California Farmer.]

THE REST OF THE BLESSED.

They sleep, they sleep, in the silent tomb,
They who have crossed the ocean's foam;
They who have left their native strand,
And wandered far in a foreign land.

Here they sleep, the young and old;
The beautiful, fair, the timid and bold;
Here in oblivion's sound repose,
Sleep kindest friends and bitterest foes.

Then sleeper! rest, though oceans swell
Between ye and the home ye loved so well;
For beyond where the coral and sea-turf grows,
You sought to find rest from all your woes.

Then rest, brave wanderers, rest in peace;
Here shall your cares and sorrows cease;
For to rest in the grave is decreed our doom,
And Christ hath hallowed the sacred tomb.

But beyond the grave is a land of rest,
For the weary ones the Savior hath blessed;
A bright, a pure and a holy clime,
Unhurt by age and unsullied by crime.

O who would not wish that rest to share,
That rest enjoyed by the holy now there;
Yes, to suffer and die is but to be blessed,
For we go to that heaven of eternal rest.

San Francisco, June 8. E. M. S.

Old Bachelors the Cause of Great Evils.

We are most happy to greet our good friend "Ben Bolt" again, the more especially as he comes so opportunely; for the subject of "Old Maids" is being warmly discussed in our columns, and why not "Old Bachelors?" We ask, however, the serious attention of our readers to the most admirable teachings of our able correspondent. We indorse all he says, but the last paragraph. Our creed has always been: render not evil for evil, but return good for evil. Now our plan would be, that woman should use all her noblest powers to bring man to the very belief that Ben Bolt declares to be his: that "every man has his mate." If that doctrine be true, surely, if the lady tries her best, and fails, then *she* is not *that one;* and if she wins, by any *undue means*, her life, and that of the so won husband, will be wretched, for Ben Bolt distinctly says, "when they meet they will know each other;" and although we do believe many persons, of both sexes, have met their mates, and let the golden opportunity pass, and mourned it all their lives, we, at the same time, believe men and women do move about over earth's surface, like stars in the blue space above, and wander years ere they meet. The grand ultimatum of this doctrine is: like the pursuers of wealth, they "make haste to be rich," and instead of listening to the God-voice in the soul, and biding their time patiently, they listen to the passions that lure them to beauty, fashion, station, wealth, and take the *shadow* of Happiness instead of Happiness itself, and spend the balance of their lives in repenting of their mad folly, or go to the courts, sue for a divorce, and set sail for "Frazer diggins," where, ere long, will be found as motley a group as ever was dreamed of in the picturing of the most distracted mind of a bedlamite.

We hope the excellent and truthful teaching of our friend Ben Bolt may receive the attention it deserves.

—

Editors Farmer: Upon all bodies, social, political, religious, and physical, there will be found, at times, growing out of and adhering to such bodies, excrescences which have puzzled many wise doctors and philosophers, in all ages, to account for their appearance, whilst the whole organization presents, otherwise, a healthy aspect, and the body is exercising its various functions in a proper manner.

For instance: upon the physical body we often see tumors, moles, warts, and cancers; on the religious, we have, in our day, Shakers, Millerites, and Mormons; the body politic has lately been afflicted with Fillibusters, Kansas, and Utah; and the social, has, from time immemorial, among many other excrescences, suffered from murderers, robbers, gamblers, drunkards, and old bachelors. Some would include old maids in the category, but I do not; I look upon them as a consequence of old bachelors. Old bachelors as the cause, and old maids the effect.

No one, not even the most crusty old bachelor, will deny that girls are a good institution. With all their wild vagaries, their freaks, and fancies, giggling, and giddiness, they are a lovable, huggable, kissable commodity. Their whole existence is a dream of love and happiness, and it is just as natural for them to look forward to the time, when they will be the center from which household joys shall radiate, as it is for flowers to bloom in spring. Should these bright visions be dispelled, by the indifference, or want of appreciation, in the other sex, and they should be doomed to old maidenhood, ought they to be blamed, if their affections, by being forced from the natural channel in which God ordained them to flow, should lead this much abused class into habits, which their more fortunate sisters affect to despise? Do we not often see a gentle and lovely streamlet become turbid, noisy, and mischievous, by being dammed up, and made to follow a course contrary to that which nature marked for it?

But old bachelors are a nuisance; like the barren fig tree, "cumberers of the ground," worse than useless; promoters of licentiousness. They are living in direct contravention of the laws of creation, and, by so doing, they are depriving another portion of creation of the rights and privileges naturally belonging to them. By refusing to marry, they deny their strength and support, and also their society, to the being who was made to be a helpmeet for them; thus forcing her into an alliance with one whom she can never love, or consigning her to the reproach of an old maid, or, worse still, transforming her into the "strange woman," whose "house is the way to hell, going down to the chambers of death."

That man and woman were designed by God to live and cohabit in pairs, few will deny, who take a rational and scriptural view of the subject. And that every woman should have a husband, and every man a wife, and only one (Brigham Young and Ali Fettah Shah to the contrary notwithstanding), I take to be easily proven. Firstly: the census statistics of the world, as nearly as they can be taken correctly, show that the sexes, in point of numbers, are nearly equal, besides physiological facts that are open to the observation of every one, differing so widely between the brute creation and the human, prove to my mind, conclusively, that the above position is in accordance with the design of the Creator. Secondly: when man was first created, his Maker saw that it was not good for him to be alone. So he made a helpmeet for him; and departing from the rule of calling the creature into being by his omnipotent word, he resorted to a plan that should convince these two creatures that they were made for each other. So manifest was this to Adam, that, when the woman was brought unto him, he says, "this is now bone of my bones, and flesh of my flesh: she shall be called woman, because she was taken out of man. Therefore shall a man leave father and mother, and cleave unto his wife, and they shall be one flesh." When it is remembered that this was before man was corrupted by sin, while he was still pure and holy, we will have to receive his words and precepts as coming direct from God, and amounting to the same as a command.

Afterward, we find that sin entered into the world, and one of the evils which are spoken of as grieving God, is, that "the sons of God saw the daughters of men were fair, and they took them wives of *all* which they chose," thereby implying that they should only take such as had been created especially for them. A popular writer says, that, "without doubt, souls are paired in Heaven ere they come on earth; for He who ordained marriage from the beginning, left not the fulfillment of his command to chance. He who commanded men to love their wives, created, in the beginning, the wife for the husband." This is my theory, too. I believe that every son of Adam has his Eve created for him, and that they will, sometime or other, meet, no matter how far apart their lots may have been cast at first. And, when they meet, they will know each other; the moment their eyes encounter, the conviction will flash upon them, they have found their mate. Although they may stifle this conviction, from some consideration, or, not choosing to follow the dictates of their hearts, they may separate, still, it will follow them wherever they may go, and so long as they may live. I will venture the assertion, that, if the truth could be had from every old bachelor in California, he would tell you this was true of himself, that, go where he would, out upon the mighty deep, on the vast desert of the plains, in the depths of the forest, mingling in the gay crowds of fashion, or in the humble cabin of the miner, he was haunted by dreams of one met in earlier life, a pair of bright eyes, and a soft, sweet voice, were wooing and calling him back to love and duty. And now when his conscience upbraids him, and shows him the unhappiness his dereliction has caused, not only to himself, but to the one his heart told him he should marry, he is forced, in the lonely bitterness of his heart, to acknowledge that he wishes he had.

Solomon, with all his wisdom, was not perfect; he was human, and it is part of humanity to err; but all the moral philosophy that has been written, from his day to the present, combined, will not equal the wisdom of the Book of Proverbs. And if wisdom and experience qualify a man to judge, then, surely, we should pay deference to his opinion on the subject-matter of this letter. He says, Proverbs 18th, 22d, "Whoso findeth a wife, findeth a good thing, and obtaineth favor of the Lord." Now if it is the married man who obtains favor of the Lord, where, I ask in all candor, shall the old bachelor obtain favor? Surely not of the ladies. Yet, we not unfrequently see him the most assiduous in his endeavors to win their favor, and generally find him their most obsequious slave. But, my fair friends, be not deceived. All his blandishments, his devoted care and attention, all his efforts to please and gratify, are only stereotype editions of former years; used, then, to win the affections of some confiding creature of your own sex, and lead her to hope and dream that she should be the happy recipient, in future, of the love and devotion he then lavished upon the whole of her sex. What has been the realization of those hopes and dreams, I leave you to judge. If he has been the cause of any misery, or unhappiness, to any of your sex, it clearly remains with you to punish him, which you will do, most effectually, in the following manner, with no fear of breaking his heart; that article he has pealed off on the onion theory—layer after layer, and distributed it among all the fair faces he has come in contact with in his life, without allowing any one a share large enough for her to lay claim to what was left: It is all gone now, except a few dried and withered chords, that, from the fact of being so, will give severe pain, from being made to sustain the slightest tension. Now, your plan of operation will be to bring all your attractions to bear upon him, whenever he comes in your way; captivate him, make him believe you love him, without telling him so; this, his vanity will help you to do; twine your fingers gently among the withered chords that should be his heart, and draw him slowly, but surely, after you, until you have him so completely in your power, that he can neither act or think for himself. Then laugh at him, use him for your sport and jest, and, if he should complain, ask him to remember when he did so unto others.

But I am trying to teach you in an art that every woman understands a thousand times better than any man can possibly describe it.

Ben Bolt.

There is a certain natural production, that is neither animal, vegetable or mineral. It exists from two to six feet above the level of the earth, and has neither length, breadth nor thickness. It is neither male nor female, though often found between both. It is often spoken of in the Old Testament—strongly recommended in the New, and answers equally the purpose of fidelity and treachery. Will our readers name this wonder?

Going into a village at night, with the lights gleaming on each side of the street, in some houses they will be in the basement and nowhere else, and in others in the attic and nowhere else, and in others in some middle chamber; but in no house will every window gleam from top to bottom. So it is with men's faculties. Most of them are in darkness. One shines here, and another there; but there is no man whose soul is luminous throughout.—[H. W. Beecher

Musical Entertainments,

Given to the Contributors of the California Farmer.

BY M. A. SARLES,

Professor of Music and Elocution, in the Collegiate Institute at Benicia.

LECTURE FIFTH, AND LAST.

PROGRAMME—PART I.

1.—Fantasia, for the Piano, upon Paganini's "Carnival di Venice".....M. A. Sarles.
2.—The Marseillys Hymn.
3.—Star Spangled Banner.
4.—My Own Native Land.

PART II.

1.—"Home, sweet Home," for the Piano.....M. A. Sarles.
2.—Banks of Allan Water.
3.—Blue-eyed Susan.
4.—The Friar of orders grey.

PART III.

1.—Old Folks at Home.
2.—Nelly was a Lady.
3.—Nancy Till.
4.—Serenade—From the Opera of "Henri Quatre," by M. A. Sarles.

LADIES AND GENTLEMEEN: What is that sensation that most powerfully sways the minds of a multitude—that sweeps over them with the irresistible force of a tornado, equally forcing all thoughts into one channel, and melting into one the hearts of those who differ widely on all essential topics? What is that lever that moves with the most wonderful ease the weightiest mass of human minds, and that needs not the arm of a Hercules, or the skill of an Archimedes to move it? What is that common sentiment by which millions of individuals are governed, and which seems born with them? It is love of Home and Country. *This* has been the power by which nations have risen to the proudest summits of national glory. *This* has been the cause of the mighty ruins with which Rome and Athens, Thebes and Carthage astonish the modern world; that has added such renown, and created such magnificence for Paris and London; that has reared the ladders by which Alexander and Cæsar and Napoleon have risen to the Alpine summits of fame. And turning from the nations of the old world, *this* is the power by which New York has with such rapidity sprung into the proud situation of the fifth city of the world, and is the cause of the immortality of Washington.

It has been the theme of the poet, and he has searched in the casket of imagination for the most dazzling jewels of intellect to illustrate and render more brilliant his subject.

The canvass has been made to speak the deeds of those who have battled for this favorite sentiment by the painter, whose mind has glowed with the enthusiasm of patriotism, and who has burned to hand down to antiquity the illustrious deeds of his countrymen.

The orator has wielded with sublime power, language to express his overwhelming admiration of this theme. It has always been his most successful topic, and upon it he has forgotten, in the enthusiasm it creates, all but the realization of his ideal model of national glory. He has not faltered nor trembled when animated by these feelings, for they have inspired him—placed in his mouth words of the most significant meaning, and in his power gestures the perfection of grace and beauty. It is the only *intoxicating* draught that can nerve him, and, at the same time, leave unwithered the powers of his mind. It does not lead to degradation; but, on the contrary, it elevates, it ennobles, it dignifies him, until he is indeed the representative of Deity—the man in whom we can see the image of God.

But the Creator of the world, in his inscrutable wisdom, has formed all mankind with different organizations, implanted in their hearts the most variegated feelings, and hence the sensations that are almost universal are few, and consequently the united sympathies of the people are not with either the Poet, the Painter, or the Orator, for their exertions are seldom rewarded by the immediate response of the multitude. We cannot all *feel* as the poet, *see* through the same medium as the painter, nor appreciate at once the turn of thought that is swelling from the lips of the orator, and it is reserved for Music alone to gather the scattered feelings of an entire people and direct them at once, and with tremendous power, towards one end, for music is the only electric visitant to whom all doors are compelled to open—the only language that appeals to every heart, and the only angel whose advances are seldom, if ever, repulsed. There may be solitary instances where music is not the language of the heart—but strange it is not—for where there is *no heart* it would be idle to expect its language. Such instances, however, are few, and the national hymns, under every clime and by every people, whenever and by whoever sung, always are responded to with instantaneous sympathy, and when their tones are ringing upon the trembling air, all men are brothers, and all are actuated by one common impulse, and arrive at one common end.

Though the national characteristics of different people are widely varying, though their circumstances and dispositions may call for separate action in this one respect, they all resemble each other, and the cold-blooded northerner chimes in with the enthusiasm of the hot-blooded child of more southern climes.

We may observe minutely the actions of the Englishman, the Frenchman and the American. We find they differ materially, and it is a difficult matter to trace any resemblance between them; but there is no difference exhibited when the "God save the King," "Le Marseilles," or "Hail Columbia," are chanted. Enthusiasm governs every heart, and the stoical manners of the one fades into the warm-hearted impulse of the other, and the eye of the Englishman flashes as bright as that of the Frenchman. Love of country, national pride, animates both, and their music is the magnetic fluid that deluges with the rapidity of thought every mind. They forget the necessity of veiling their dispositions, and under the influence of *one* power, at least, they all become natural. It is not an unselfish feeling, I will admit, for the elevation of a country necessarily enables each individual to exercise his powers of advancement upon a wider field, but at the same time it is seldom, very seldom, that the interests of all are thought to be the interests of one.

The power of music to create enthusiasm is most forcibly illustrated by the fact that it is absolutely necessary in time of war. And no commander would deem his army perfect, or would trust it, if the band of musicians were not well appointed. From the remotest antiquity, we find this custom an universal one, and in modern times it has become a necessity. The moments preceding a conflict, solemn as they are, and carrying the mind to a contemplation of all the probable results, would dishearten the bravest soldier, unless some powerfully exhilarating agent—powerful without being injurious—were called into action to neutralize the effect of such thoughts; for, show me the most iron-hearted man who would not become divested of half his energies as the thought of his home and his wife and his dear children flashes across his mind—as he imagines the probability of his treading the paths of the Valley of the Shadow of Death, and in pain and misery sinks a victim to the passions of war—as he muses on the fate of many who have preceded him—taken a prisoner, driven like a miserable dog to his dungeon, and compelled to pine away days, months, perhaps years, in his confinement, with no loving face to press against his own, with no affectionate heart to cheer his solitude, and with no companion to speak with but his own desolate thoughts—a solitary flower, wasting away its fragrance in a wilderness—as he fancies to himself the fate of those he loves, of their barren and blasted feelings, of their inexpressible misery as they learn his untimely fate, and perchance of their poverty to which his death will reduce them, his mind will be driven to the shores of madness, and his hot brain and feverish pulse ill accords with the duties before him—and even if he possesses the soul of a Nero, his wickedness or his departure from the regions of pleasure will incapacitate him for battle. But when his General eloquently speaks of triumph, and then as his national anthem is sung out in stirring accents by the musicians, and the trumpet and drum sound to the charge, the fire of enthusiasm is kindled, hope cheers him onward, the will and wish of glory dazzle his sight, and with impulse he joins in the chorus and shouts in the accents of fearless bravery, in the undaunted words of burning enthusiasm—"Victory or death!"

In the hour of triumph, music is equally exciting, for it adds fuel to the flame; but its promptings are generally noble, and it excites emotions of pity for those whose heads are bent and whose banners are trailing in the dust.

In the moment of defeat, when the heart experiences the depths of anguish to which despair can take them, they seldom hear other than their enemies' pibroch; but if some dauntless fifer can squeak out in return one strain of a national air, hope returns to them, and the head rises from the breast, the eyes flash with renewed fire, the step regains its elasticity, and they indignantly scorn themselves for having shown before their conquerors one thought of sorrow or despair.

The influence of national music is elevating, ennobling, and that people who are the soonest moved by its power are most likely to attain the ultimatum of their wishes.

Hoping, ladies and gentlemen, that we shall ever cherish in our hearts an affection for our home anthems, and that they may always direct us to benevolent purposes rather than selfish ones, I will have the honor of commencing my evening's entertainment, with many thanks for your attention so far, and with the hope that I have successfully administered to your pleasures.

PART I.

1. The air which I shall now perform is one that is almost universally known, and is almost invariably a theme for every new pianist, and one by which he exhibits his talents in comparison with other performers who have preceded him. Originality of style is the aim that all strive for, but few reach. I have made octave playing my especial study, because, first, it is exceedingly difficult and attainable by few, and secondly, because it is a style more manly in its character. Perhaps you will not deem my aim a commendable one, but it is one that all are striving for, and I shall be rewarded if I meet your approbation. The author of my theme was the celebrated violinist Paganini, whose extraordinary genius has had no rival in his department of art. The violin for a long period was considered a vulgar instrument, and was used to perform the simplest airs, but in the end of the seventeenth century, Corelli proved that it possessed the requisites of a master instrument, and was deserving of particular study. Since his time it has been a favorite one with the lovers of music. Of the Italian school, Viotti was the most celebrated. Eck, who flourished about the year 1790, and Spohr, the most renowned of living musicians, are the head masters of the German school. Leclerc, Kreutzer and Rode are the most prominent violinists of France; to which should be added, likewise, the name of Bailliot.

The Home Journal thus speaks of the piano: "Musical instruments, in which the tones were produced by keys acting upon stretched strings, are of considerable antiquity; but the piano-forte, properly so called, is an invention of the last century. The instrument that immediately preceded it was the harpsichord, in which the wire was twitched by a small tongue of crow-quill, attached to an apparatus called a *jack*, moved by the key. At length, in an auspicious hour for the interests of music, the idea arose that, by causing the key to *strike* the string instead of pulling it, the tone might be considerably improved, and the general capabilities of the instrument otherwise extended. This contrivance opened an entirely new field to the player, by giving him the power of expression, in addition to that of execution; for, by varying the touch, a greater or less degree of force could be given to the blow on the string—whereby the effects of *piano* and *forte* might be produced at pleasure. This was the great feature of the new invention, and gave to the improved instrument the name of *piano-forte*. Who was the inventor does not appear certain. The merit has been ascribed by turns to the Germans, the Italians, and the English; and the date of the invention is also obscure."

2. Le Marseilles is the stirring song of the French people, and is always chanted upon occasions of importance. Its effect even upon an uninterested spectator is profound, and any one who has listened to it, when thousands of Frenchmen have joined in its chorus, will candidly admit that it is unequaled by the national airs of any other country.

3. The Star-spangled Banner is the most refined in sentiment, and the most beautiful melody of all the airs belonging exclusively to the United States, and is the only one that sounds very impressively as a solo.

4. My own Native Land, is a song not as well known as it deserves to be. The air is simple and dignified, and the sentiment worthy of any people.

PART II.

1. Where is that person whose heart has not throbbed with unutterable emotion, as the simple but touching melody and the sweet words of Home, sweet Home, have vibrated the chords of his soul, sweeping their strings with a thrilling power, and bringing vividly before his mind's eye the loved scenes of childhood. He may seem a stoic to all other feelings, but the flowers that are the children of the seeds planted in infancy, can never be withered, and the hand would be indeed a sacrilegious one that could tear up the roots that are deep-tuned in his heart. Their flowers are the lilies of the soul, and angels when they gaze upon them sprinkle them with the dew-drops of heaven.

To one surrounded by all the present associations of home, and encircled in the arms of love, the air does not seem as immortal, as to him who is a wanderer. Compelled by either a roving and restless disposition, or by the stern commands of iron destiny, to roam in uncongenial climes and mix with the uninterested world, his thoughts cling with unspeakable tenderness to its associations; and even in old age, when the glow of morning has vanished and the chills of age have blighted the flowers of youth, they entwine themselves about him as the ivy embraces the decaying tree, and though he molders away, yet the leaves of such remembrance continue fresh as ever; and thus they will remain until the trunk falls to the ground and their stems have been snapped in twain. We may roam where we may, there is one feeling that is changeless in the midst of change, one rock that is immovable in the midst of the rolling ocean; and whether we associate with the insignificant Laplander, the ostentatious Englishman, or the representatives of the refined and elegant nations of the old world, we will find this a common ground of sympathy; and even in the untutored savage, this one feeling will be appreciated and respected. There are a few sentiments that bind together mankind in all climes, and the most powerful and the most beautiful of these is the love of home.

2. "The Banks of Allan Water" is a favorite ballad with nearly every singer, and its mournful story and plaintive music appeals at once to our sympathies. It was a particular favorite with Caroline of Wirtemburgh, whose extraordinary beauty and heart-rending misfortunes occupy no unimportant place in the mention of history.

3. It is very common to charge sailors with faithlessness, and to speak of them with coldness and oftentimes contempt, but this is undoubtedly a species of vulgar injustice that all should condemn who are at all acquainted with their character, for as a class, there is not a more industrious, brave-hearted and truthful body of men in the world. True there are many instances to the contrary, but it would be certainly very wrong to judge by these black sheep. The Farmers of the Ocean; their lives are one scene of toil and constantly recurring peril, and they are the faithful workers of those who dare not venture upon the waters of the 'vasty deep," and it is ungrateful in us to return all their devotion to our interest by calumniating them. The poet Gay has done them justice, and has portrayed their character in a different light from most writers; but the common feeling against them must be imputed to lamentable ignorance. I have found them possessed of rude and generally unhewn manners, but with hearts as trusty as their ships, and with sentiments as widely liberal and expansive as the ocean waves they master. They are too often thoughtless, but when they have homes, and wives and children, they cannot be allured into the paths of vice; and the responsibilities that rest upon them, transform them into thinking, active and trustworthy men—and men, too, who are not only willing to work hard for their loved ones, but who are ever ready to contribute to the wants of their fellow beings.

"Do unto others as you would have them do unto you," is a rule that is followed more strictly by the sailors than by any other class; not that they read the Bible as much as they should do, but because it is a rule that is suited to their peculiar characteristics.

4. The next selection is a song by Henry Russell. It no doubt is a correctly drawn sketch. The severest satires have been musical ones.

PART III.

Negro Minstrelsy has had the most unprecedented share of public favor, and for aught I can see, promises to retain its influence for some years to come, but eventually it must give way to a more cultivated taste; for in our country, where every man has the same chances of becoming rich, and where education and luxuries are distributed with wonderful equality, refinement and education have made unparalleled strides, and every person will soon become an amateur musician. There are said to be more Pianos in the city of New York, than in all England; but I am not one to rail at the taste for negro music. It is the stepping stone of our progress to better things. It is the A. B. C. of our musical advancement, and I feel grateful to it for having awakened the people to the importance of this truly divine art.

The immense Océan was accumulated drop by drop, the Islands of the Southern Seas owe their existence to the insignificant coral worm, Man springs from the puling infant, and why may not our Negro Ballads aid us to reach an elevation in music beyond the hights that are now considered almost the ultimatum of man's exertions. No end should discourage an American, and the more difficult of attainment the greater the reward that shall repay our perseverance. We have produced a Washington, a Franklin, a Fulton, and a Morse; why cannot we have those in Art who will rival a Michael Angelo, a Raphael, and a Mozart? We can. Ay! and we will.

FARM STOCK, ETC.

PUBLIC SALE
....OF....
SHORTHORNS.

I WILL SELL AT AUCTION, on the 20th July, next, at CIRCLEVILLE, OHIO, about

Sixty Head of Shorthorn Cattle,

thoroughbreds, full bloods, and grade descendants of the earliest importations, Bulls, Cows, and Heifers of all ages.

MISCELLANEOUS.

Austin's Patent Wooden Fan

WINDMILL.

THE undersigned has secured his PATENT for the NEW WINDMILL invented by him recently, and which by every test yet made, has proved to be most completely successful.

This Windmill is so constructed as to revolve up to the wind, and by its GREAT POWER, a nine-foot wheel will carry TWO Number 6 Rotary Pumps with ease.

This Mill is simple in its construction, not liable to get out of repair, and of very moderate cost. It is moved with a very light wind, and however heavy the wind may blow, no danger is incurred to the mill.

THE PRICE OF THIS WINDMILL, of 9 to 11 feet diameter, set on secure posts, 18 feet from the ground, will be $75, including the putting up, and attaching to the Pump, in any part of this county.

Any person of common ability can put them up, as directions for so doing go with them.

JESSIE A. AUSTIN, PATENTEE, STOCKTON, Cal.

N. B.—The undersigned warns all persons from infringing upon his Patent, as they will be dealt with according to law. (14) J. A. A.

Vance's Branch.—New Gallery.

AMBROTYPES, PHOTOGRAPHS,
Daguerreotypes and Melainotypes.

VANCE & CO.,

Corner of Third and J streets,

(Miller & Andrews' Building) SACRAMENTO,

HAVING fitted up a large suit of rooms, at the above place, in a manner unsurpassed in the State for richness of fittings, accommodations for visitors, and arrangement of lights, we are now prepared to take any of the above styles of Pictures at 25 per cent less than our former prices, and 100 per cent better than can be obtained elsewhere in the city. Being the owners of JAMES A. CUTTING'S PETENT RIGHT for Atmospherically Sealing Ambrotypes, we shall give our patrons

The Genuine Patent Ambrotypes,

which, since their introduction at our establishment in San Francisco have gained such popularity.

We would take this opportunity of warning the public against "bogus" pictures taken at other rooms, and called "Ambrotypes," which are but a base imitation of the Patent Ambrotype, they being taken upon the cheapest quality of glass, and not sealed—thus rendering them liable to be destroyed by dampness, change of climate and other accidents to which the old style of Daguerreotypes was liable. You have but to ask yourself the simple question: Which will last the longest, a picture firmly sealed between two glasses, or one exposed to air and dampness? The genuine Ambrotype is cemented between two glasses; and as there is no space between them, no dampness can collect.

We shall also take, as usual, our **Premium Daguerreotypes** and **Photographs**, as heretofore, in a manner

UNSURPASSED ANYWHERE.

Having three operators—one for each branch of the Art—With Mr. I. G. FRENCH (who is well known to most of our patrons, he having been in our establishment for years), at their head, we can safely guarantee

PERFECT LIKENESSES

to all. With prompt attention and good work, we trust to meet with the success we have had in San Francisco.

We invite all to *Call and Secure Rooms and Specimens,* whether in want of pictures or not. VANCE & CO.,
9-3m Sacramento.

Pioneer Establishment.

FOR curing of FISH of all kinds also for the curing of prime HAMS AND BACON. Always on hand, the best article of Smoked and Pickled Salmon and Herrings, warranted of superior quality, in packages to suit.

The Subscriber is now engaged in Pork Packing, and is desirous of extending the business; for that purpose he will purchase well-fatted Hogs in any quantity.

The Smoking of Beef is also a branch attended to at this establisement.

On hand and for sale—one hundred tons of SALT—Liverpool, St. Quentin, Carobine Island and China Salt, of superior quality. GEO. COOPER,
Front street, opposite Water Works Building,
v9-14 Sacramento.

The California Farmer.

SAN FRANCISCO, FRIDAY, JUNE 18, 1858.

STEAMER EDITION.

Visiting Committee of California State Agricultural Society.

THE VISITING COMMITTEE of the State Agricultural Society give notice that they intend to proceed on their Visiting Tour of the different portions of the State, for the purpose of examining Farms, Orchards, Nurseries, Vineyards, Gardens, Mining Operations, Quartz Mining and Machinery, and the various other Industrial operations of the State: That they will visit every section and locality that time and convenience will admit; and that as a matter of economy and saving to the Society they will hope to find all the facilities of passing from one farm to another offered them that is possible.

The Committee will endeavor to keep the public informed through the columns of the CALIFORNIA FARMER and the Marysville papers, of the routes to be taken in rotation, and the time of visiting the different localities.

About the 20th to 24th of this month, a portion of the Committee will leave Marysville *en route* northward—passing through the vicinity of San Juan, Forest City, Downieville, Monte Christo, and La Porte;

And will leave La Porte about 1st June, for Gibsonville, St. Louis, American Valley, Indian Valley; returning via Spanish Ranch, the Meadows, Buck's Ranch, Bidwell's Bar, and Oroville.

G. H. BEACH, Rec. Sec.

MARYSVILLE, May 7th, 1858 18

The Workshop a Gold Mine.

How strange is it. that a mechanic who has a good situation, steady employment, and prompt pay, should listen for a moment to the alluring excitements of the Frazer river country, and give up a certainty for an uncertainty. "A bird in the hand is worth two in the bush." "Let well enough alone," should be the motto of every good mechanic, at the present time. Continue where you are at present; wait patiently for better authority than has yet been given, of the riches of this new and untried country.

We ask of all mechanics, a serious consideration of the following facts: It is the universal testimony of all from that quarter, that it is yet *too early* to enter the rivers and commence mining. Then why all this haste? Why not wait until we have *better proof* of the riches of these new diggings? Have not thousands already been out prospecting? and where is the gold they have found? we repeat, where? Surely enough have reached the ground to have sent back a *hundred thousand dollars*, if all is true that has been said of the diggings; and yet a mere pittance has came down; a mere *bagatelle*; and there is more commotion through our State than was ever experienced in '49. We were among the crowd of early miners in '49, and remember it well, and we assert, without fear of contradiction, that the excitement now exceeds, in many respects, the furor of those times. Yes; and in many cases by those who should have learned wisdom by the follies of the past.

Mechanics, reflect! Leave not a good employment; turn not away from a steady and generous employer; reflect well. Your present labor pays, for it is *certain*; Frazer river may roll out gold by the ton, but that is *uncertain*. One thing *certain* is worth *twenty uncertain*. Take our word for it, you will soon find it so.

Mechanics, you now have a good employment, a good home, are in health, surrounded by friends and many blessings and enjoyments. Are not these worth more than gold? Pause! reflect! If the past has been dark, "act well the present," and look hopefully to the future, and you will bless the hour you took time for "a second sober thought."

County Agricultural Societies.

IT is to be hoped that the friends of agriculture in every county in our State will call meetings and *organize societies* for their respective counties. Such a measure would do great good, even should that county hold no Fair the present year. It would be the means of making farmers acquainted with one another; and, at the same time, *special delegations* should be chosen to attend the State Fair and see that the interests of each county are cared for in the committees and influence of the State Society; for the State Society is the property of the whole State, and should claim the care and co-operation of every county and every farmer in the State.

We call special attention to the Report of County Societies in Massachusetts, in another column, as worthy the consideration of all in California.

NEW FRUIT.—The steamer Senator brought up from Los Angeles, Pears and Apricots, the first fruit from the South this season. The most of this lot came from San Pedro, and there the fruit sells for twenty-five cents a pound on the trees. An arrival of Apples from Chile, also, gave our market the appearance of perpetual fruits. Some eleven hundred boxes come by the Metador, from Talcahuano, of which five hundred boxes are to be sold at auction, to day, to try the market. New Apples have appeared at Sacramento, also, the growth of that great valley.

FINE RIPE CHERRIES.—A fine bunch of luscious ripe Cherries was brought to the FARMER office, from the garden of Mr. Phillips, on Silver street, in this city, grown upon a tree planted last season. Twenty cherries were gathered, as perfect as ever grown. This climate, which was at first thought to be too *hot* and *dry*, is now proved to excel in growing cherries.

GOLD.—The rush for Frazer mines shows the love of gold is still the ruling passion. How many hopes will be blasted, how many hearts crushed, and how many lives will be sacrificed for this "root of all evil."

"My Native Land."

"Lives there a man, with soul so dead,
Who never to himself hath said,
This is my own! MY NATIVE LAND."

THERE is an inherent principle in the breast of every true man, wherever born, that bids him love and defend his own native land, his country, State, and birth-place; and we honor every man who is true to his own home.

We love old Massachusetts; God bless her! Her rock-bound coast, her snow-clad hills, her winding streams, her fertile gardens, are all dear to us. And then, those triune martyr spots, whose very soil has been made holy with the blood of patriots—Bunker Hill, Lexington, and Concord. Where lives an American, whose heart does not beat quicker at the mention of these glorious battle-grounds. It matters not to him where born, East, West, South, or North, there is a chord in his heart that thrills to these holy memories; and the near approach of the memorable Fourth of July will recall how much the blood spilled upon these sacred mounds has served to make the sons of every State a band of patriot brethren, born wheresoever we may be. But we must to another strain.

We received by the late steamer, two Books of Records, which, coming from our native State, and our own immediate birth place, have awakened in us a deep interest, for they are both upon subjects that are now of moment to us. We have received from the Hon. C. L. Flint, the Secretary of the Board of Agriculture, the Fifth Annual Report of the Massachusetts Board of Agriculture, a most valuable work, of about 300 pages, with plates, containing full details of the state of the agriculture of Massachusetts, the annual exhibitions, reports of the State farm-school, stock, &c., with the complete returns of the various County Agricultural Societies of Massachusetts.

These Societies are sustained by the munificent endowment of the State; and this act on the part of the State, their success, the magnificent returns they make by advocating these great interests and increasing the taxable property of the State, should be an example to every State in the Union. Several States, we are proud to say, adopt the same plan, and we hope California will not be behind at the next Legislature. We give below the table of these counties:

FINANCIAL RETURNS OF AGRICULTURAL SOCIETIES FOR 1857.

SOCIETIES.	Am't rec'd Income on Com. prop. permanent fund.	New members' donations.	All other Rec'ts for the year.	Premiums offered.	Prm's and Gratuities paid out.	Cur'nt ex. penses of the year. PERMANENT FUND—HOW INVESTED.

Massachusetts—Bank stock in Boston banks and Massachusetts Life Office.

Essex—Bank stock, notes, and railroad bonds.

Middlesex.—Real estate mortgages, bank and railroad stocks.

Middlesex South.—In real estate, $7050; pens, &c., $300; notes receivable on interest, $665

Middlesex North.—In real estate, $2822 31; notes, $2500.

Worcester.—Bank stock.

Worcester West.—Promissory notes and cattle pens

Worcester North.—Bank stock, notes of hand, and cattle pens.

Worcester South.—Loaned on collateral security to double the amount of the fund, except $255 in pens, tables, storehouses and fixtures.

Hampshire, Franklin, and Hampden.—In notes secured by mortgages upon real estate to the amount of the entire property.

Hampshire.—In notes, mortgages, real and personal property.

Hampden.—No amount returned under oath according to law.

Hampden East.—In notes.

Franklin.—Notes and mortgages.

Berkshire.—In notes and real estate.

Housatonic.—In notes against individual, bearing annual interest, being five hundred and nine, of $16 67 each, amounting to $8,473 33

Norfolk.—In real estate occupied by the Society.

Bristol.—Bank stock and notes of hand.

Plymouth.—In thirty-one acres of land, exhibition-house thereon, cattle pens, tables, and house furniture. The land cost about $6000; the house, $9000; pens, furniture, &c., $500.

Barnstable.—In land, and building on the same, $4500; notes, $1100; and pens, $300.

Nantucket.—In notes (personal), and Ayrshire bull.

The total amount of all the property of the Societies is $178,175 68.

The other book we received was the Report of the School Committee, from our native town; a handsome pamphlet, of twenty-five pages, giving the details of the cause of education in Brighton; and most gratifying is it to us to know of the prosperity of that cause there, as recorded in the pamphlet kindly sent us by the Committee. We gather from the report, that with a population of about 3000, there is appropriated $5500 for schools; having a high-school, two grammar-schools, and six district-schools; and all supplied with able teachers, well paid, the Principal of the high-school receiving a salary of $1200 per annum. The amount thus appropriated is equal to $8 58 for every pupil.

There are 332 towns in the State, and Brighton ranks among the best in the best for this cause, being number fifteen; and while the city of Boston devotes *a quarter of a million dollars* for schools, her proportion to each pupil is $8 81, and Brighton's is $8 58. Should we not feel a pride, a just pride, in recording facts like these, though our own feelings may prompt us in partiality to our native land; but the cause we plead. *Agriculture* and *Schools*, these two great corner-stones of the prosperity of any State, will be a sufficient excuse to our readers for the way in which we introduce the subject; and we hope the example will stimulate all in such good works.

Flour and Wheat Market.

THE Flour and Wheat Market is in an uncertain condition; it is, in a measure, unsettled. The cause arises from the Frazer madness, which acts upon everything like heat and cold upon the mercury of a thermometer—to-day up, to-morrow down. The demand for Frazer river has sustained the Flour market against the new crop. Old wheat is wanted to grind with the new, or with sour flour. New wheat has come in small quantities to market, but yet too green, and commands only about three cents. In a brief time a value will be established.

GREAT SALE OF FLOUR, AND ARRIVAL OF MORE.

We attended the sale of Gallego and Haxall Flour, this day, to see the value put upon it. It was put up in lots. The first lot, of 100 barrels, brought $12; the second, 200 do, $11 87; third, 400 do, $11 62½; fourth, 800 do, $11 62½; fifth, 500 do, $11 62½. This shows the market value, and is much less than was expected. The coming on of the new wheat crop must affect all sales now.

There has come into port, this day, another lot of Haxall Flour, 1500 barrels. This came from Valparaiso. Thus we see the result of pressing up the market in times past; our market now feels it.

Briggs' Great Orchard.

G. G. Briggs, Esq., near Marysville, has the largest and finest fruit orchard in California. His grounds, now employed as a permanent orchard, cover 160 acres, and have been prepared with great care, and planted with the best varieties of fruits.

The principal variety consists of peaches, of which he has now, mostly in bearing, about fifteen thousand trees: 5,000 apple trees, three hundred in bearing; 3,500 pear trees, several hundred in bearing, some of them the largest and best in the State; 3,000 nectarine; 3,000 apricot; 2,500 Plum; 2,500 cherry; 100 fig; 2,500 grape, and others, making nearly forty thousand fruit trees in one orchard.

It will be recollected that Mr. Briggs now occupies the grounds so long celebrated as Briggs' melon patch, of '50, '51 and '52, when and where he sold melons at $8 a-piece.

We were most courteously conducted through his entire grounds. We saw the fruit trees loaded with their immense crops, and have never seen a better orchard, or one that gave such promise of a princely increase, as the Briggs' orchard. We should suppose he would gather at least 50,000 baskets of fruit the present season. This orchard, the result of his own untiring industry and labor, is worthy a ride of a hundred miles, and he richly deserves the fortune he has in store. It lies upon the banks of the Yuba—a rich, alluvial bottom land—where no irrigation is needed, and is about two and a half miles from Marysville—a very pretty ride. Mr. B. intends to sell his fruit altogether by the wholesale—sending out wagons to every part of the mines.

A College at Yountville.

WHEN we were on our tour through Napa, we learned with much pleasure that the friends of Education were taking measures to establish a College of the highest character, at Yountville, and that the citizens were ready in the most liberal manner, to aid it. We learned of donations of $1000, and $500, in several instances. Now we rejoice at this. We hope it may prosper, as it certainly will; for there, in that district, dwells the brave old pioneer G. C. Yount, Esq., and his known liberality will come in aid to endow a College, we know, and we hope most sincerely that it will bear his name—that should be the title, "Yount College."

There are so many liberal minds there, we know it must prosper. We saw the energy and good will of Dr. Matthews, and others, for this work, and we feel that it will be done. Success to it, we say.

Agriculture at Red Bluff.

WE are right glad to see the Red Bluff Beacon so earnest in stirring up the farmers in that section, to the importance of forming a County Agricultural Society. Work on, brother, it is a good work; build up a good County Agricultural Society, and you will secure to your journal a large increase to your list of the best of subscribers, and these are the farmers and mechanics—they are the stand-by's of the State.

A GENTLE RAIN.—Last night we had a gentle rain, that was quite refreshing. It came so unusual, that people were surprised, yet it was acceptable, and the earth and air acknowledge its excellence.

Agricultural Studies at Benicia.

THE Collegiate Institute at Benicia, under the charge of C. J. Flatt, Esq., is the first college on the Pacific coast that has introduced the study of agriculture and applied it to practical purposes.

We have witnessed with pleasure the plans of Mr. Flatt, and the feeling evinced towards the cause of agriculture; and we rejoice to know that he intends to lay off a portion of his handsome grounds for a garden, to be used for teaching the science of agriculture among his pupils. God speed the work, and success to the first agricultural school upon these golden shores.

A new brick edifice of fine dimensions has just been finished for the opening term, and we heartily commend this Institution to the favor of the public.

SMUTTY.—Farmers from the country inform us, that, notwithstanding crops look remarkably well this season, it is feared that there will be less grain than there was last year, in consequence of the smut, which, we are told, is almost universal throughout the country, wherever the seed wheat was not washed with vitriol. This remedy seems to have proven very effectual in preventing smut. [Red Bluff Beacon of June 9.

When will people learn wisdom. We could gather many just such facts from every part of the State. Everywhere people say *smutty wheat, where they don't use vitriol*. With so easy a remedy, and one so universally known, we ask, do those who have lost their crops deserve sympathy? We scarcely hear of a reader of the FARMER that has lost his crop by such neglect.

THE CULTURIST.—The first number of this promised journal of Horticulture has been laid upon our table. It is truly a most creditable magazine, and we cordially welcome it to the field of labor for the great cause of beautifying the earth. The Culturist contains a plate of Mr. A. P. Smith's beautiful Peach, and several wood cuts. The editorial and selected matter are full of interest. This magazine deserves success, and we hope it will receive a liberal support. We wish there could be more journals of this kind, it would aid the cause of Agriculture much. The Culturist is published by Messrs. Wheeler & Wadsworth, at $5 per year, and issued monthly.

TO GRAIN-GROWERS.—Our grain harvesters are especially reminded to look to the recent arrival of the *Manny Reapers* per clipper Prioress, advertised by Treadwell & Co. in the columns of to-day. These reapers are so well known that praise of their quality is not required; it is only necessary to say, that Messrs. Treadwell & Co. will offer these at a bargain to those who call at once, so that the cost of storing them may be saved. The very large stock of other agricultural implements, miners' tools and hardware, is worthy the particular notice and attention of purchasers.

LEATHER AMBROTYPES.—"He is on his high leather, he is!" Now Vance, of San Francisco, is pretty famous with his new photograph, ambrotype and *leather* pictures, and there is no mistake but he *can* make as handsome a picture as anybody's folks; but when at Sacramento, some two weeks since, we saw some specimens of work upon leather, taken by Vance & Co., which means *Davis*, being the partner of Mr. V., that we think rather *beats* the Bay City. They were truly superb, and then so handy to send in a letter or carry in one's pocket-book. Come, friend Vance, your pupil at Sac. City is going ahead, and you must look out.

THE mail steamer Sonora arrived on Monday evening, bringing upwards of 800 passengers.

The Pacific Mail Steamship Company has signed a contract with the Tehuantepec Company, to take mails and passengers on the Pacific to San Francisco, and the Department has extended the Pacific Company's contract for one year in consequence, the service to commence in October. Peter A. Hargous is to furnish the money to complete the Tehuantepec road. The compensation for the mails from New Orleans to the Pacific Ocean, is to be two hundred and eighty thousand dollars a year for semi-monthly service; and the plan is to make Tehuantepec the mail route to California, and to discontinue the Panama route.

HOLCOMBE BROTHERS SHOE STORE.—This firm at both their large stores—their wholesale and retail store on Commercial street, and their retail store on corner of Kearny and Washington streets—are doing a most satisfactory trade. Their stock is one of the largest and best assorted in the city, and their exertions to suit their patrons both by the quality of their stock and by their personal attention to business, secures them a run of trade worth having.

FINE BLOOD STOCK.—S. & W. Long, of Vacaville, Solano county, have now for sale some noble stock of the Durham breed, a splendid three-year old cow, value $800; a cow, valued at $1500, sired by Prince Albert, dam Kentucky Belle; a yearling, valued at $1000, sire Bob Letcher, dam Lilly. Those in want of extra stock will do well to call on Messrs. Long, and see this stock.

WHEELER & WILSON'S SEWING MACHINES. These famous machines are now attracting the attention of the public, more than any other machine in California, and we find them over the State everywhere. H. C. Hayden, Esq., the agent of these machines, has removed to the corner of Montgomery and Sacramento streets, where he has opened a splendid room, and is daily visited by numerous purchasers.

NEW STEAMSHIP.—We call the attention of our readers to the strong appeal made to our citizens by our excellent correspondent B., in our columns. It is the best article on the subject ever published, and we hope it will be widely scattered abroad. We shall have a new line, beyond a doubt.

CIRCULAR.

THE SECOND INDUSTRIAL EXHIBITION ....OF THE.... Mechanics' Institute ....OF THE.... CITY OF SAN FRANCISCO,

Will be held in that city, in September next,

Commencing on WEDNESDAY, the 1st,

and continuing open at least fifteen days.

THE PRESENT DIRECTORY OF THE INSTITUTE, with the light of experience shed before them by the efforts of their predecessors, and with the precedent already set establishing the fact, beyond a doubt, that an Industrial Exhibition can be gotten up in this city, and conducted to a successful termination, enter upon the task before them with buoyant hopes and bright anticipations, entirely free from all apprehensions of failure in this, the second effort of the Institute. While it will be the constant aim of the members of the new Board to imitate the example of those of the old, in their zeal, energy and harmonious action, it will be their steady care to avoid, if possible, any errors which experience may have detected in the working operations of the system before adopted; hoping thereby to enlist the hearty co-operation of all who may desire to become contributors to the display, and to secure the approving smiles and generous patronage of an appreciative public.

The advantages which have accrued from our first Exhibition, are so numerous and so obvious, as to have secured already, to its projectors, and those who aided them in the enterprise, the hearty thanks and commendations of all who feel an interest in the progress and welfare of our State. The Exhibition presented, in a tangible form, unmistakeable evidences of the rapid strides which had been and were still being made in the development of the Mechanical, Agricultural, Horticultural, and Mineral resources of our youthful State. It tended to the dissemination of correct information concerning our immense natural resources, and awakened in the minds of the ingenious new ideas concerning their development. The exhibit of what had been done, so plainly pointed out what still remained to be accomplished, that a spirit of emulation was at once aroused among all classes of the community, and latent talents were aroused and directed to channels of business before unthought of. All this must result in immeasurable benefits, and when its record is read abroad—establishing, as it must, in the minds of all who are open to conviction, the fact that California presents such advantages as are nowhere else to be found, not only to the operative workmen of every pursuit, but to him who seeks the safe investment of capital in any legitimate channel—it must have the tendency to bring to our shores an increasing immigration, which is at present our great and only want.

It is earnestly hoped that the coming Fair will in no wise fall short of the attractiveness of the last; but that, on the contrary, a marked improvement will be visible in every department: and, to that end, a cordial invitation is extended for an exhibit of the products of every branch of industry, embracing works of art of every description, inventions of every kind, choice specimens of ingenuity and skill, the delicate and beautiful handiwork of women, useful labor-saving machines, implements of mining and husbandry, new models of machinery, the products of the quarry and the mine, of the hot-house, the orchard, the vineyard, the garden and the field; in short, whatever nature or art can contribute, curiosity discover or ingenuity devise.

Importers and dealers are cordially invited to participate in the Fair, by exhibiting whatever is calculated to excite interest or extend information in regard to useful improvements.

Persons throughout the State and the adjacent Territories are requested to communicate such facts relative to the natural resources and the facilities for industrial pursuits in their respective districts, as may be deemed by them important; also, to give reliable information concerning the geology and mineralogy of their particular localities; and a committee of scientific and practical men will be appointed to prepare a report based upon the information thus derived. We cordially invite the co-operation of all classes, believing that ALL are interested in making this Exhibition worthy of general notice and admiration.

Medals and Diplomas will be awarded to the owners of such articles as may be deemed worthy of distinction, and we intend that the strictest impartiality and fairness shall be observed in the appointment of judges and the distribution of awards.

The State Horticultural Society has determined to hold its second Annual Exhibition in connection with that of the Mechanics' Institute (as their circulars will announce) sharing the responsibilities and benefits of the enterprise; and it is earnestly hoped that their members and all other persons in Horticultural pursuits, will aid with their presence and contributions an Exhibition which, if successful, must prove a source of pride and satisfaction to every citizen of the State, and an accelerating influence upon its already rapid progress.

The California Steam Navigation Company, the Pacific Mail Steamship Company, and other transportation companies, have generously offered to carry articles intended for the Fair free of charge; and all such which may be forwarded should be labeled, "For the Industrial Fair," and addressed to "H. F. Williams, Mechanics' Institute, San Francisco."

San Francisco, 17th April, 1858.

RULES AND REGULATIONS OF THE Second Industrial Exhibition of the Mechanics' Institute of the City of San Francisco.

1. The Pavilion will be ready for the reception of contributions on the sixteenth day of August, and will continue open for that purpose until Tuesday, the 31st day of that month. The Exhibition will be open to the public on Wednesday, the first day of September.

2. When articles are entered, a check for the same will be given, which must be presented when the articles are returned.

3. The name of every article should be attached to it, with a description, pointing out its merits and uses—whether a new invention or an improvement on an old one—and whether imported or manufactured in the State.

4. Articles intended for sale should be labeled accordingly, but cannot be removed until the close of the Exhibition, except by the written permission of the Executive Committee.

5. Light, fancy, or perishable articles will be received and may be removed at any time during the Exhibition, with the consent of the Executive Committee.

6. Proof of origin must be given when required.

7. The several Committees of Judges will be appointed on the first day of the Fair, and reports will be expected from them at the end of the first week, that the awards may be prepared for distribution by the Executive Committee at the close of the Exhibition.

8. The morning of each day, till nine o'clock, will be appropriated to the Judges, and visitors will not be admitted during that time.

9. In case of misunderstanding, application may be made to the Executive Committee, who will at all times be in attendance.

10. Steam power will be provided, that machinery of all kinds may be seen in actual operation, and every facility possible will be given to exhibit all working machinery to the best advantage.

11. All articles deposited will be at the risk of the owners, who are invited to be present during the hours of exhibition. In the intervals of the Exhibition, efficient measures will be taken for the protection of property.

12. It is desired that articles should be presented early, that they may properly appear upon the catalogue; and should they arrive from a distance before the rooms are in readiness, they will be stored free of charge.

13. Owners or agents offering goods for exhibition will receive tickets of admission gratis, but such tickets will in no case be transferrable.

14. A separate apartment will be reserved for the exhibition of imported articles.

15. A Juvenile Department will be opened for the exhibition of youthful contributors, that their productions may not be brought into unequal competition with those of more mature years and experience.

16. Persons intending to take part in the Exhibition are earnestly requested to make known their intention at the earliest practicable period, stating the kind of article or articles they intend exhibiting, and the probable amount of space required.

17. For further information, address H. F. WILLIAMS, Corresponding Secretary of the Mechanics' Institute, San Francisco.

JOHN SIME, D. H. FREEMAN,
DANIEL VAN PELT, H. McNALLY,
H. F. WILLIAMS, J. D. PIER-ON,
P. B. DEXTER, A. E. PHELPS,
J. E. KINCAID, J. N. RISDON,
PETER DONAHUE, THOMAS TENNENT,

22 Executive Committee.

EARLY APRICOTS.—We have been presented by Dr. Bateman, of this city, with two Apricots, the entire product of one of the trees in his garden, this latter circumstance being possibly the cause of their ripeness at so early a season.

We clip the above from the San Joaquin Republican, of the 16th, and presume by a slip of the pen, the *two apricots* should read *two baskets*. Why, neighbor, trees this way, say Sacramento valley, have been in fruit for weeks, and they bear bushels.

CONCERT AT MUSICAL HALL.—The concert for the benefit of the Unitarian Society, for the purchase of an organ, was a pleasant affair, and very creditable to the Director, Mr. Scott, under whose management the affair was gotten up. The children were beautiful and happy, the *tableaux vivants* excellent, the music grand, the ladies charming, and the gentlemen gallant. It was indeed a better and richer claim upon our sympathies and hearts than all the temptations of Frazer river.

OUR EDITORIAL TABLE.—Never have we been more blessed with kind correspondents, than at this time, and had we been so unwise as to have thought of Frazer river, the stream of good thoughts from our correspondents would have driven away all idea of it, for their gifts are better than gold.

By the last steamer we received a most valuable letter from our correspondent Grace Greenwood.

Florence Percy also sends us a letter, in her own beautiful style; also, "Come up Hither," lines breathing the very *soul* of poetry.

"Rosa" comes from her happy home with a message too.

"Slander," by our new contributor, "Justice," a most truthful sketch.

We have a valuable letter from another new contributor, at Washington, D. C Miss H. Fanny. Read, which is a source of pride to us.

"Mary Welden," an interesting sketch, by our esteemed friend and correspondent Edith Montressor, is accepted.

"Duties of Parents to Children," by "Mary Glen," received; also, some curious and interesting items of history and romance.

"Thoughts on Flowers," from F. A. C., very beautiful—accepted, and will shortly appear.

We have also a host of letters from gentlemen. They will pardon us if we do not name them. They are all good. We return thanks to all for their valuable favors; we duly appreciate them, and shall publish them speedily.

FAVORS RECEIVED.—We are indebted to Freeman & Co., and the Alta Express for parcels and papers per steamer. Also, to J. H. Still for papers. We are often indebted to the courteous messengers of Wells, Fargo & Co., and the Alta Express for favors as we travel from place to place, for which we return thanks.

AGENTS FOR EASTERN WORKS.—Warren & Co. will receive subscriptions for the following works: The Horticulturist, published by C. M. Saxton, New York; the Country Gentleman, published at Albany, N. Y., by L. Tucker; and The Little Pilgrim, by Grace Greenwood, Philadelphia.

EMPORIUM OF FRUIT.—Messrs. Graves & Williams, whose new warehouse is now ready for the sale of Fruit on commission, should be noticed by our fruit growers. A splendid glass case is being prepared for the exhibition of specimens from all growers, with their names.

A shoemaker has one important advantage over most kinds of mechanics—his goods, whenever finished, are always *sold*.

To all who suffer from *Weakness and Debility*, we say, try the Oxygenated Bitters—a medicine which contains no alcohol, and has cured the worst cases of Dyspepsia, Asthma, and all derangements of the stomach.

HOLLOWAY'S PILLS AND OINTMENT.—Beware of Counterfeits! Purchasers are hereby informed of a certain test as to the genuineness of these remedies: it is necessary to see that each leaf of the book of directions around each pot and box shows the words "Holloway, New York and London," as a water-mark in semi-transparent letters. All not thus authenticated are frauds.

Sold at the manufactories, No. 80 Maiden Lane, New York, and No. 244 Strand, London; and by all druggists, at 25c., 62½c., and $1 per box or pot.

BAGS! BAGS! BAGS!
Made to order at 75 cents per 100, by
J. A. SMITH,
MACHINE SEWING FACTORY,
No. 76 Davis street..between Clay and Washington,
22 *San Francisco.*

Removal to New York
....OF THE....
"HORTICULTURIST."

A LONG CONNECTION WITH THE PUBLIC as a Publisher, and especially of Agricultural and Horticultural Works, as well as an innate and fostered love of these topics, has induced me to become the

Proprietor of the Horticulturist,

a journal which has long maintained a prominent place in the homes of a large circle of patrons throughout the Union, and British Provinces. It is my belief, that, by devoting almost exclusive attention to this publication, its influence for good may be greatly extended

The interest in Horticulture having greatly increased, during the publication of this periodical, under the successive editorial management of A. J. DOWNING, B MUNN, P. BARRY, AND ITS PRESENT EDITOR, J. JAY SMITH, we hope that it will now enter upon an enlarged sphere of usefulness.

TERMS:

Two Dollars a year, payable in advance.
The Edition with colored Plates, **Five Dollars.**

Pledging every effort in my power to make THE HORTICULTURIST worthy of the confidence, and patronage of the public, SUBSCRIPTIONS ARE SOLICITED.
Address all business communications to
C. M. SAXTON, Publisher,
25 PARK ROW, NEW YORK.

☞Having been appointed an Agent, persons in California who desire this valuable work can be supplied by applying to us. WARREN & CO.
22

ALAMEDA COLLEGIATE INSTITUTE
....FOR....
YOUNG LADIES AND GENTLEMEN.
Dr. W. Grove Deal, Principal.

THE EIGHTH SESSION OF THE INSTITUTE will open **Thursday, July 15th, 1858.**

LOCATION:

The Alameda Collegiate Institute is located in a pleasant Oak Grove, in the village of Alameda, in sight of the Bay and city of San Francisco.

The Contra Costa and Opposition Steam Ferry Boats touch at our landing, from which Stages convey passengers immediately to the Institute.

The place is remarkable for its healthiness, and delightful climate; and is equal to any for its quiet, morality, and freedom from everything that would divert the students from their studies.

TERMS: 5 months.

Board, Tuition in English Branches, and Ancient Languages, and Washing	$185 00
Music, including use of Instrument	50 00
Modern Languages, each	25 00
Embroidery	25 00
Tuition in English Branches, per session	30 00
Classics and Mathematics	35 00

Bills due half-yearly in advance. This regulation must in all cases be complied with, unless special arrangements are made with the Principal.

Each scholar must have every article of clothing distinctly marked with her or his name.

Boarders supply their own Bedding, Napkins, and Lights. Books and Stationery supplied at city prices.

No deduction made for absence or parts of a month.

For further particulars, address
Dr. W. GROVE DEAL,
22 1m Alameda, or San Francisco.

BOOKS RECEIVED.—A copy of the new work upon Hedges and Evergreens, published by Fowler & Wells, of New York, edited by J. A. Warder, Esq., of Cincinnati, is received. The work is specially useful to California—it is an invaluable work. The editor has often distinguished himself in the cause of agriculture, and this work adds new laurels to his brow.

We are indebted to Senators Gwin, Broderick, and other gentlemen in Congress, for valuable books and documents, for which we tender thanks.

We have also received "Characteristics of California," by Dr. Bushnell, from G. Amy, Marysville. Extra copies Mechanics' Institute Reports, by the hand of their Secretary, H. F. Williams, Esq. Rural Register, L. Tucker & Sons, Albany, N. Y. Golden Wreath, a beautiful book of choice songs, published by that friend of music, Kohler—it should be in every family and every school.

THE HESPERIAN.—No. 4 of this excellent magazine came to hand duly, and we rejoice to see evidences of success. The Hesperian is now under the sole management of Mrs. F. H. Day, whose efforts are deserving the highest reward.

RAIN.—By telegraphic dispatches received in this city, we learn that rain has fallen in Sacramento, Placerville, Sonora, Sonoma, Nevada, and other places.

SPECIAL NOTICES.

Memberships of the State Agricultural Society.

☞ THE EXECUTIVE COMMITTEE having furnished us with Membership Tickets of the State Agricultural Society, persons wishing said Tickets, can always find them at our Office, here, or procure them of the Editor, as he passes over the State It should be remembered by Exhibitors, that all persons who wish to become competitors for Prizes, should become member of the Society; and such persons will have their contributions conveyed to and from the Fair, by the steamers, free of cost.

For particulars, we refer to the Rules and Regulations found in the Premium List.

☞ **Splendid Merino Sheep.**—Having been appointed agent to act for some of the best breeders of stock in the Eastern States, and having advices from them in relation to their prices, and the manner and cost of shipping, we can answer all inquiries, and put parties in the way of importing stock to the best advantage. We have the sale of the great Prize Buck at the World's Fair in Paris, and also the Prize Bucks of the last season at New York, with samples of the wool, their breed, and produce. Persons in want of the best sheep ever offered for sale may learn all particulars by addressing us by mail. We can also aid them in the purchase and shipment of blood stock from the other side or from England.

☞ **New Books.**—We are now opening a fine collection of Agricultural Books, worthy especial notice. Various works on Fruits, works for Stock-raisers, books upon the Sugar-Cane, and new Poultry books. Fa s visiting the city would do well to call and see these ks, or they can send by Express for them.

☞**Oxygenated Bitters.**—
WORCESTER, June 27, 1854.

Gentlemen: After suffering much, for two years past, from Dyspepsia, I was induced to purchase of your Agent in Worcester, a bottle of your *Oxygenated Bitters*, and after a trial of less than two bottles, I find myself radically cured.

I have not the least hesitation in recommending them to all who are afflicted with this distressing complaint. You are at liberty to use this as you think best, to further the sale of this excellent medicine. Yours truly, JOHN GRAY.

Any individual suffering from weakness and derangement of the stomach, nervousness, or debility in any form, can be *cured* by this medicine.

Seth W. Fowle & Co., 138 Washington street, Boston, Proprietors. Sold by their agents everywhere.
Agents—C. MORRILL, cor. Third and K, sts., Sacramento; H. JOHNSON & Co., Washington st., San Francisco. 19-1m

☞ **HOUSEKEEPER WANTED**—A gentleman and his wife about leaving for Europe, have a beautiful residence and fine grounds, in a neighboring city, with all the materials for a Happy Home.

The House is well furnished; has a Library, and Gems in Natural History, and a well planned and planted garden—all well prepared for the uses of a family.

A fine Milch Cow, two swine, twenty-two laying hens, fifty young chickens, thirty rabbits, a dozen Pigeons, eight Canaries, two Linnets, two Horses and Buggy, and other blessings two numerous to mention. The whole grounds cover a space of five acres, and contain Fruit Trees in bearing; a Vineyard loaded with promised fruit: a Garden of Flowers (second only to Adam's home in Eden), and much more that could be said (including servants that would remain).

Now—the advertiser is in earnest, and will not place it in the hands of any person that would not care for it as their own, and return it in good safe order, in about ONE year or more. To a Widow Lady, with small family, or a Lady Teacher, this splendid Mansion will be rented as it stands, with all these comforts, at a nominal rent. None need apply that cannot produce the best assurances that the property will be sacredly cared for and the rent paid as shall be agreed on, which will be advantageous according as the party is worthy.

All communications should be addressed to "K. K. B., California Farmer Office," and they will be promptly attended to, the party desiring rather a careful guardian to the property, than great income. 14tf

☞ **COUNTERFEITS! COUNTERFEITS!**—HAVING been informed by our friends in some sections of the country, of the great injury done to their Hair, by the use o what purported to be the genuine **LYON'S KATHAIRON**, but proved to be worthless counterfeits and imitations; we caution the public against such imposition. Avoid all dealers who attempt to sell the spurious articles, for they are not to be depended upon in any matter. The great excellence and universal popularity of the genuine **LYON'S KATHAIRON** is attested by its immense sale—nearly 1,000,000 bottles per year; all pronounce it the most excellent preparation for the Hair ever made. Sold by all respectable dealers, everywhere, for 25 cents per bottle.

HEATH, WYNKOOP & CO.,
Proprietors and Perfumers,
63 Liberty street, New York.
PARK & WHITE, Wholesale Dealers,
19 1m *San Francisco, California.*

☞ **Wigs! Wigs!! Wigs!!!**—BATCHELOR'S WIGS AND TOUPEES surpass all. They are elegant, light, easy and durable.

Fitting to a charm—No turning up behind—No shrinking off the Head. Indeed this is the only establishment where these articles are properly understood and made.
v8-13 1y 233 Broadway, New York.

☞ **HAIR DYE! HAIR DYE!! HAIR DYE!!!**
Batchelor's Hair Dye is the Best in the World!

GRAY, RED, OR RUSTY HAIR DYED INSTANTLY TO a beautiful Natural Brown or Black, without the least injury to Hair or Skin.

Fifteen Medals and Diplomas have been awarded to Wm. A. Batchelor since 1839, and over 80,000 applications have been made to the Hair of his patrons of his famous Dye. Prejudice against Dying the Hair and Whiskers is unjust, as it would be against covering a bald head with a wig.

WM. A. BATCHELOR'S HAIR DYE produces a color not to be distinguished from nature, and is warranted not to injure in the least, however long it may be continued.

Made, sold or applied (in 12 private rooms) at the Wig Factory, 233 Broadway, N. Y.

Sold in all cities and towns of the United States, by Druggists and Fancy Good Dealers.

☞ The Genuine has the name and address upon a steel plate engraving on four sides of each bottle, of
WILLIAM A. BATCHELOR,
v8-13 1y 233 Broadway, New York.

HOTEL
INTERNATIONAL.
San Francisco, California.

THE UNDERSIGNED INVITES the attention of the Traveling Public and strangers in particular, to the merits of this House.

It was established under its present management on the 1st January, 1857, as a

FIRST-CLASS HOTEL,

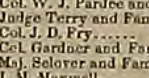
in every particular. The present
Lessee and Managers,
A. S. HALEY,
JNO. J. HALEY, and E. R. ROBINSON,

with a delicacy not wishing to encroach upon the merits of other houses, cannot but recall the marked favor with which their enterprise has been received by a discriminating public, in a constantly increasing patronage of the

FIRST RESPECTABILITY,

showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most
POPULAR PLACES OF AMUSEMENT,
THE PRINCIPAL THOROUGHFARES,
THE FASHIONABLE PROMENADES,
AND STEAMBOAT LANDINGS;
thus rendering it at all times the most
DESIRABLE STOPPING-PLACE
For Families or Single Gentlemen,
during their sojourn in this city.



THE "INTERNATIONAL-HOTEL COACH," under the superintendence of P. B. SMITH, late Stage Agent at Sacramento City, is in attendance at all hours to convey passengers to and from the Hotel, for One Dollar each, including Baggage.

A. S. HALEY, LESSEE.
ASSISTED BY: JOHN J. HALEY, and
E. R. ROBINSON, formerly of the New York Hotel.

PALMER & WILLIAMS' SELF-RAKING REAPER.

THRESHERS:

"HALL'S" 8 and 10 horse THRESHER AND SEPARATOR....This Machine we have had made for this season, with great improvements, and it will be the best *THRESHER* in market this year—34, 36 and 38-inch cylinders, and cannot fail to give entire satisfaction.

"SPENCER'S" 8 and 10 horse THRESHER AND SEPARATOR....This is one of the largest and most durable Machines that comes to California, and has been well tried, and found "good."

STEPHENSON & BIRDSALL'S 8 and 10 horse THRESHER AND SEPARATOR....A large, splendid Thresher, with late improvements.

WHITMAN'S 4 horse THRESHER AND SEPTRATOR....This is a very desirable Thresher for small Farmers. It is got up with great care, and will give good satisfaction.

EMERY'S 2 horse THRESHER AND CLEANER....Greatly improved over last year.

EMERY'S 1 and 2 horse THRESHER, WITH FAN MILL.

The above Threshers will be sold with or without Horse Powers.

"Haynes'" Heading Machines or Harvesters.

These Machines are in general use in the Western States, and are pre-eminently adapted to California.

HORSE POWERS:

SMITH'S 8 and 10 horse PLANET POWERS, WITH HALL'S IMPROVEMENT.

PERRAGO'S 8 and 10 horse PLANET POWERS....This is one of the most successful Powers in use; has taken a greater number of premiums in the Atlantic States than any other Power; is simple, strong, and durable.

WHITMAN'S 4 and 6 horse ROTARY POWERS.
ROGARDUS' 2, 4, and 6 horse do do.
FIELDS' 2, 4, and 6 do do do.
EMERY'S 1 and 2 horse TREAD POWERS.

This Machinery comes in compact cases, can be sent to any part of the State or Coast at small expense, and marked so that it can be easily set up.

Extra Castings, for all the above, constantly on hand.

The Celebrated Boston Steel Clipper Plow.

We have these Plows exclusively, and keep a stock on hand at all times, Extra points and parts can always be had.
This Plow can be run with half the power it takes for the "Peoria" Plow of same size, and must commend itself to all who wish to save "horse-flesh."

The Peoria Steel Plow

Constantly on hand.

These styles of Plows come 10 in a case, and the expense is very small in sending them to the remotest parts of the coast or interior.

HAY PRESSES—Several sizes; best makers.
Do. CUTTERS—Several sizes and kinds; hand and power.
HORSE RAKES—wood and steel teeth; 8, 10, and 12 feet.
GRANT'S GRAIN CRADLES—In cases of one dozen each.
Do. FAN MILLS. Also, the Boston Mill.
CORN SHELLERS—Hand and power.
Scythes and Snaiths—best steel Scythes and Lamson's Snaiths.
Hay and Barley Forks—2, 3, and 4 tine; of best makers.
Carpenter's Patent Wire spring-Tooth Horse Rakes, 10 to 15 feet long, with wheels, and seat for driver.
Ox Yokes and Bows—all sizes.
Churns—Thermometer, Dash, and Cylinder; also, Dog Powers for do.
Garden Barrows, Cauldrons and Furnaces. Cultivators.
Horse Hoes. Seed Sowers, Harrows.

Field and Garden Seeds

Of every description, *via* the Isthmus—this year's growth (1857).

Steam-Engines, 4 to 15 Horse Power.

Suitable for Ranches or Mining purposes.

Portable Flour Mills and Mill Stones—Noyes' make. All sizes, 16 inch to 4 feet.
Belting, Bolting Cloth and Packing—All kinds and sizes of the above.
HARDWARE—The best stock in the State.
MINING GOODS—All kinds in use.
COOPERS' AND TANNERS' TOOLS—Full assortment.
Baling Wire—Annealed.
Hay Rope—Best Manila.
Grindstones—Best dressed Nova Scotia; from 6 inches to 4 feet diameter, packed in casks in sawdust.
Wire Fencing—A neat article for inclosing Gardens, Henerics, &c. Also, for Ornamental Garden work Grape and Rose Trellises.
Wooden Ware—In great variety: Tubs, Pails, Buckets, Measures, Baby Cabs and Wagons, Peach and Strawberry Baskets, &c. &c. 9v-23

Valuable Sheep for Sale.

SAXON MERINO;
FRENCH MERINO;
PURE BLOOD.

300 full-grown EWES; 120 RAMS;
100 Maiden Ewes;
Imported April, 1858, from Australia,
Per ship Sea Bird.

THESE SUPERIOR SHEEP, ALTHOUGH LANDED under every disadvantage, are now recovering from the effects resulting through the extreme severity of the voyage, extending to upwards of one hundred and four days. The stock will be open for sale

from and after the 21st instant.

These RAMS were selected from a choice of three thousand, taken from the flocks of three of the most celebrated breeders, namely: Lawson, MacArthur, and Bettington, by whom the enormous price of five hundred and six hundred dollars, for each of the original stock, was paid. The Rams are of immense weight, thoroughly wooled, from the eye to the very hoof; producing a fine, heavy fleece, worth about three shillings per pound in the English markets; unanimously acknowledged to have the finest fleece, and largest carcass, ever imported to these shores.

The EWES were bred by Mr. Lethbridge. They, also, in proportion, are equally as large in frame, and quite as fine in the fleece, and all will be lambing in about two months' time.

The system of breeding, on all the establishments connected with the aforesaid parties, is, never to allow the Ewes to breed until three years old, thereby promoting a large animal, sound constitution, and, by judicious crossing, the most profitable fleece, in texture, closeness, length, and soundness of staple, together with a symmetrical, compact carcass, the weight of which, when slaughtered, invariably surpasses its appearance when alive.

The offer of half a crown per pound was refused for the clip of these sheep, a few days previous to leaving Sydney. In proof of the value in the London Market, reference is made to J. T. Sims & Co.'s Public Sales, in possession of the consignee, in which it will be found that this wool maintains the highest price throughout the whole catalogue.

As an investment, with a view to future prospects, this stock is worthy of attention. Every desirable advantage is embraced in this occurence; two distinct breeds, giving the facility of crossing without deteriorating either wool or carcass. Possibly an improvement might thus be gained, although this is a question entirely dependent on the market requirements, whether the preference be given in favor of Combing or Clothing Wool. Parties embracing the advantage, will be in a position to breed either, or both, whichever may prove most satisfactory to the pocket.

The advantages, now presenting themselves, are seldom to be met with, embracing every necessary requirement for establishing the foundation of a large income, with little trouble, by ordinary management, and a comparatively small outlay for such an investment.

The enterprising community of Sheep Farmers should not fail to avail themselves of this desirable opportunity of investing, which is not likely to offer again for a long time to come.

For further particulars, and samples of the fleece, apply to Messrs. WHITE & WILSON,
Merchant street, between Sansome and Battery,
San Francisco.
21 1f J. T. THRELKELD.

EARTHEN WATER PIPE.

FROM AND AFTER THIS DAY (May 21st), I will be prepared to furnish the

French Patent Earthen Pipe,

in any quantity, of the following size:

Pipe, 4 inches in diameter, 20 cents per foot.
Do 2½ do do 15 do do
Do 1½ do do 6 do do
With the necessary T's and L's.

Orders left with the undersigned will be promptly attended to.

Samples of the Pipe can be seen at my office.

[For the California Farmer.]

THE BIRTHNIGHT.

[Our much valued correspondent "Rena," from the sunny South, comes again to our columns, breathing strains of sweetness, that will indeed find welcome in every heart that loves and appreciates true poetry:]

'Tis night! a holy night, and mind roves free,
A fitting time to wing my thoughts to thee.
I have been dreaming all the live-long day
That thou wert near,—although so far away.
I know 'twas but a dream, and still I sought
To linger mid the fancies my poor brain had wrought.

To-night, thy birthnight! were I at thy side
To clasp thee fondly and with holy pride
Know all the joy that dwelt in Eden's bowers
Ere sin had dimmed its brightest, fairest flowers;
I'd whisper softly all my love, and tell
The spell that binds us, none may know how well.

True thou art far, yet at this midnight hour
Thou smil'st upon me, and with gentle power
Come loving thoughts to soothe my spirit's pain,
Bright jewels of the past, fond memory gives again.
Thy love is with me, round my heart is thrown
The dearest charm that I could wish to own.

To-night thy star ascendant rises bright,
No clouds o'ershadow, all is glorious light,—
Midst silver curtains it with luster gleams
With rare effulgence, woos the moon's soft beams.
I stand, enraptured gaze, deeming thy star above
Will bring thy spirit near, and with it peace and love.

APRIL, '58. RENA.

[For the California Farmer.]

Education of Woman.

OAK-SHADE FARM, Santa Clara Co., May 26, 1858.

MESSRS. EDITORS: Will the day come when woman, in all stages or periods of her life, will know herself secure from flattery and seduction; when she can trust man everywhere as a brother, father, and friend? We are hoping for that day; are we all living so as to usher in such a blessed state? when man will be so clothed upon with righteousness and truth, that he will be able to stand in the integrity of his better nature, and exercise the God-like attributes bestowed upon him by a wise and benevolent Creator, for the protection of those who were given to man as angels of love, and fountains of life to our world. Oh, woman! how has thy beautiful nature been disrobed of its purity and excellent capabilities to fulfill thy exalted destiny, by those who should have been thy guardians in life's journey.

And now turn we to the estate of girlhood, that interesting period of woman's life, when the vail of new affections is about to be removed, that she may stand forth in the loveliness of the most holy relationships of life. How often, during this brief season of girlhood, are many found impressing upon her mind lessons calculated to mislead her in the character she is putting on. All the impressions made upon her at this important period are a part of her education, no matter how full of error; and it may take years of slavery of mind to purchase emancipation from errors forced upon the individual in a few brief months. Mothers, I ask you to let your daughters remain little girls as long as you can; don't hurry them through this period, and instead of the trashy, unwholesome, light reading allowed by many, between the ages of thirteen and sixteen, throw in their way that which is morally healthy; that which will benefit and bless them in after life, in becoming wives to honorable, high-souled men, and mothers to those who will, in their generations, become such, by being sons of mothers who knew something about themselves, their abilities physical and mental, because they had learned to use them, thereby cultivating and expanding the intellect, until they were in possession of pure motive power, impelled by high resolves to be physically well employed, mentally illuminated, morally guided, and ever onward and upward toward that which is purer, better happier, higher than ever earth can afford. Who can lull the aspirations of woman, upon whose mind have dawned the first correct ideas of her high destiny? Yes, mothers, let us furnish our daughters correct knowledge of themselves, and their ability to do, and be something more than a butterfly for weak, trifling adulation or pursuit; and instead of teaching them that it is unfashionable to be seen engaged in the domestic duties of our homes, let them know that by being so employed they are an honor to society, a blessing to parents and loved ones, and objects of sincere admiration, as far as sensible men are concerned. Thus can we give a little in the way of education, as we pass along through life's duties, which will benefit in all after life.

We now pass to that point where mothers see the hour when the daughter will stand forth, plighted in affection to become a wife. Mother, beware of the lessons your dear one receives at this time, they may be such as will involve in bitterness a whole lifetime afterwards. Oh! I wish all marriages could be contracted and entered upon naturally, without the influence of circumstances, birth, or education. Start not at this wish. Don't think I wish for anything in this but the purest and best should wish for—the righteousness and happiness of those concerned. Are any others really married than those who are as soul finding soul, spirit blending with spirit, mind harmonizing with mind, according to unchanging laws? And you, dear girls, I plead with you. Allow not yourselves to be made the victims of delusion in this matter; let no flattering beguile you; no proud position wealth can offer, purchase your soul's freedom in marrying other than the real object of your most exalted choice. There will be no fear of divorces occurring with such. No, they are really united No others are—only legalized living together. Heaven help them to do the best they can, for marriage to them is no haven of repose and safety, where the affections concentrate and make an Eden of love. Much is said and written on the subject of divorce, by persons of ability, but the wrong is not there. Divorce is an effect growing out of unrighteous marriages. Let us, as women who detest both the cause and effects, seek properly to remove the evil, by teaching our daughters to know themselves, and the men they choose for companions; and though ills may cluster around their pathway through life, they will be found standing side by side in overcoming all, even seducers and desecrators of happy homes. Some are too modest to talk with young girls on such subjects. What? wait until she is a married woman to be taught anything about herself in the responsible position she is assuming? Better be ashamed to allow her to enter upon duties she knows nothing of, and a position she is, from ignorance almost entirely unfit for sustaining in dignity and purity of life, yielding the peaceable fruits of a righteous union of two faithful hearts.

I have now followed woman to the life of young womanhood, early plighted to become a wife, and would it were that we could know she was safe in this state from lessons calculated to mislead. The strong, self-reliant woman is, it seems to me, always safe; she thinks and knows for herself. But all are not thus. Many, by a false course of education, are not in the habit of thinking or acting independently, and also correctly of themselves; they are always being led, not walking alone; don't know much about self or any other individual. Dear ones of my sex, when you get married you will after, if not before, be in a situation which absolutely demands that you should know something of yourself and also others, to be able to live happily together. Woman often mars her own happiness by her ignorance of the proper course to pursue in life. She will seek advice, and she sometimes receives such as will add greatly to her embarrassment if heeded by her. Mothers, above all things, never impress your daughter to appear other than she is, before the individual she is going to be united to. Remember, no assumed appearance can be worn eternally. If there is anything to be found fault with by the person she marries, better just show before marriage your real self, dear girls; there is such a reality in being ourselves, there is such native independence in acting ourselves, and such a happiness of knowing it is ourselves who are the object of esteem, instead of a poor, weak, make-believe-something, that is not really our ownselves. It is sad, oh, sad it must be, the awakening from such a delusion, to find we loved appearances not belonging to the one we loved, but worn to win. I may be probing, but never mind, my object is good to all. Woman, seek to be free from all error in knowing thyself as thou art, to be pure in living thy true life, one of love and usefulness, a life of independent truthfulness in acts and words, and in pursuits ennobling to our sex; and let us so live, and think, and say, and do, that our brother man will acknowledge that God made us truly as a helpmate for man. Poor brother, thou wast found alone; thou couldst not stand; help was created for thee, but what hast thou done? Many, yes many have sought to destroy the relationship instituted of Heaven, by perverting the true nature of woman. They have made her often an avenger of her own abused, down-trodden affections, which were given for the purposes of happiness.

The most embarrassment in teaching the young woman a lesson, which the present state of morals makes necessary in our world among men, I have found in making her fully understand, for the first time, that man was not to be trusted, even where he made declarations of love. It is hard to be compelled to teach such a lesson. Would there were no necessity for ever whispering this admonition to our daughters. The cry has always been, what woman ought to be, and what she in reality is; but after man has changed her by the immoral lesson he teaches her, call her no more woman; she is the victim of man, and she will, in a thousand of ways, become an avenger upon society for the wrong that has been inflicted upon her. She is also the victim in society, but she retaliates fearfully there. Who can say it is not just? Man taught her the lessons which have produced such evil, so contrary to the moral laws of our being. I would that society were more just; that the man, the real offender, be made to feel, as she has done, the full measure of the wrong he has done himself, his victim, and also society at large. Let him know the estimate placed upon any departure from moral purity in him as well as his victim, for in ninety-nine cases of a hundred he was the one who deceived. Who ever heard of a man being deceived? No, they pride themselves in being strong-minded; yet all are not. You who are noble, and good, and true, just help to redeem those who are not. Pray just have an eye over your brother man; hold him up when you see him acting other than the guardian of woman, until he finds that he cannot give woman such immoral and debasing lessons without being taught himself.

I have gone thus far, and some may think I have said but little on the subject of education. Well friends, now I will say a few more words to all: Remember in your book education, or that part of education which is derived from books, is food for the intellect. Now this is one third of the being to be educated; there is the physical and moral (or religious) being beside. The whole being is becoming educated at the same time, and a variety of teachers are giving lessons to the young. What I desire is, that we as mothers so teach our daughters the necessity of being physically well employed, as to be favorable to a good, strong, healthy, moral tone of sentiment in themselves, preparing them, in obedience to action of such healthy sentiments of morality, socially, as to free our moral atmosphere of all impurity. All that occurs, all that is spoken, all that is acted toward our daughters goes to form a part of their education; and even the magnetic or electric sound of words spoken by us will live in the memory when we are far, far away from them, or sleeping the sleep of death (I mean the body).

I hope others will give their thoughts on this subject, with greater light than I possess, all are desiring to do what can be done in this age of rapid progress. No matter if the effort is weak, if it is our own; it is worth something to be able, in this ease-loving world, to make any effort at all for others. And now friend FARMER, I have taxed your patience through a much longer article than I intended at the beginning; wishing you success and happiness in the pursuit of right and truth, and diffusion of the useful, good, and beautiful, by way of powerful appeals in your paper from the gifted ones who contribute to the variety of subjects embraced in its columns. Good-by till after harvest. N. B. H.

We can see, with almost prophetic vision, the dawn of a new era in the social life. The present sad state of our social institutions, the vast amount of misery and unhappiness that is now causing our best institutions to shake to their base, is awakening an almost universal interest in every part of our land, among the earnest hearts of mothers, wives, and daughters. The education of woman is the great work that claims the highest exertion of mankind; for much of the misery that now exists, arises from error, caused by the unwise, injudicious, and unharmonious unions, which have resulted in misery, and thus entailed unhappiness upon the innocent. This error will be corrected when woman is educated as she ought; and we rejoice to see the subject now presented in the able manner it is by our esteemed correspondent N. B. H., whose letters should be read by all in our land.

[For the California Farmer.]

Charity.

The highest exercise of charity, is charity towards the uncharitable.—[BUCKMINSTER.

CHARITY, says St. Paul, envieth not; vaunteth not itself; is not easily provoked, and thinketh no evil. How few can be said to possess this kind of charity, without which, says the Evangelist, though we may possess all knowledge and spiritual gifts, we are but as a sounding brass, or a tinkling cymbal. How indispensably requisite is this principle of love and charity in those who lead the minds of the masses, which, like vines, whether of the poisonous oak, or of the fruitful grape, seek for support and direction, and are ever ready to twine around anything higher than themselves; and if in this, they fail to be elevated, they again fall back to a lower and more hopeless condition.

In order to have harmony of sentiment and unity of action, among those who labor for the happiness and progress of mankind, there must first be charity, one with another; when this is secured, all will then be easy to accomplish, which otherwise would be impossible. No one can live wholly for himself, nor independent of others, since other minds have designed, and other hands constructed our houses, our garments, and the many instruments of labor, from the steam-engine to the steamer which cooks our vegetables, as well as the thousand articles of furniture for our comfort and convenience; and who with a reflecting mind, can sit down to his table, spread with luxuries from every quarter of the globe, and not think and feel grateful to the many busy hands which have been instrumental in placing them before him, and whose unrelaxing toil drives famine from every land; and should he not remember, with feelings of gratitude and love, his fellow men, who though nominally working for themselves, are none the less laboring for him and others. This bond of material interest and mutual benefit, should serve to bind closely the great brotherhood of man; but there are still higher and more noble pursuits which should unite the minds and hearts of all in supplying food and nourishment to the immortal and better part of man.

But true charity not only does what is right, and speaketh nothing wrong, but *thinketh* no evil. Alas! how far is human nature from this perfection; how little do we obey the simple law, which says, "Love thy neighbor as thyself," which if but fully obeyed, who can conceive of its effects, or count over the benefits of peace and happiness which would follow; what bonfires might be made of the tomes of law-books, and of theological comments and controversies; armies and navies no longer needed to disturb the peace of the world, might be sent on exploring expeditions by land and sea, nor would we need the constant vigil of the police to watch over life and property: who can even imagine such a desirable state of things, when stores might be left open without the fear of theft or depredation, while the merchant goes out to take a drive with his family, and if anything is taken away, that the money will be left upon the counter, or not not knowing the price, be sure to settle for it at no distant day; and the old apple-woman, on the corner of the street, no longer obliged to sit in the burning sun and watch with drowsy eye the purloiners of her fruit, might go away and sleep in some quiet place, and at even', return and find her money on the stand, for every apple gone. No longer would the voice of slander cause the heart of the weak and erring to fail, until despairing of regaining the paths of rectitude from which their inexperienced feet had wandered, they plunge deeper into vice and sin, or seek in death, oblivion of their woes; but the hand of charity would be extended to lead them gently back into the paths of wisdom and peace, and to pour in the oil and wine of kind words of hope and pity, soothing the wounded heart and spirit, and then bidding them go on their way rejoicing, with this gentle admonition, "Go and sin no more."

Such as this, and much more which will occur to the reader's mind, would be the natural result of obedience to this law. And will it ever be? or is this but an unmeaning prayer or enigmatical phrase, "Thy kingdom come, thy will be done, on earth as it is in heaven?" and where is the kingdom of heaven to begin? Did not Christ say, "that it cometh not by observation, but that it was within you?" Let all take heed that they do not misinterpret the second coming of Christ, as did the Jews his first, and remember that he said, also, that his "kingdom was not of this world," but is a spiritual kingdom, and as such the nations of the earth are represented by St. John as being angry, when the seventh angel shall proclaim that the "kingdoms of this world have become the kingdoms of our Lord and of his Christ."

There has never been a time when the minds of the whole civilized world were more ready to receive and investigate every truth and theory, which may tend to ameliorate the condition of mankind, than the present, and to try and understand and to unravel the mystery of our being, and to try and obey the laws of harmony which will produce happiness, and no longer war against God's irrevocable decrees, but to yield obedience to his wise commands.

The laws of the progress and development of mind and matter are immutable and eternal, and have been gradually unfolding the beauties and designs of the great Architect to the wondering gaze of millions of created intelligences, since the first dawn of creation; nor will they ever cease while God exists, or a creature lives to adore his wisdom and goodness.

As this world occupies the plane between good and evil, those who choose the good, may, by the exercise of faith, hope and charity, rise above it, or yielding to the influence of evil, sink to its lowest depths of degradation and misery; from whence the ascent, if not utterly hopeless, must be slow and toilsome indeed.

EDITH MONTRESSOR.

CULTIVATED WOMEN.—Sheridan said, beautifully, "Women govern us; let us render them perfect; the more they are enlightened, so much the more shall we be. On the cultivation of the mind of women depends the wisdom of men. It is by women that Nature writes on the hearts of men."

One of the infirmities of our nature is always to mistake feeling for evidence, and to judge of the season by a cloud, or ray of sunshine.

HORTICULTURAL.

A. P. SMITH'S

POMOLOGICAL GARDEN AND NURSERY,

On the American River, 2½ miles from the Steamboat Levee,

SACRAMENTO.

THE Proprietor has the pleasure of offering to the Patrons of the above establishment the present season, the finest collection of TREES that will be offered to the public, both as to fine size and superior beauty of the trees themselves, and also the most extensive as to number of THE VARIETIES—embracing as they do

All Kinds FRUIT TREES,
SHADE AND ORNAMENTAL TREES,
GREENHOUSE PLANTS,
SHRUBS, ROSES,

And also an unusually fine crop of

GENUINE GARDEN VEGETABLE SEEDS.

All of which we offer upon as reasonably low terms as they can be had at any reliable establishment.

Our Peach, Apple, Cherry, Apricot, Nectarine, and Plum Trees,

Are very large-sized, many of them of very superior size, making it an object to persons who desire to make plantations of large-sized trees, to give us an early call, and examine for themselves before purchasing elsewhere For the convenience of purchasers we have divided our trees according to the following scale of size, and persons in making their orders will please to mention the size they wish, as follows:

From 3 feet to 5 feet high;
From 5 feet to 7 feet high;
From 7 feet to 10 feet high.

We call particular attention to our splendid stock of

CHERRY TREES,

THE FINEST AND LARGEST IN THE STATE, embracing all the finest varieties, and of which we can furnish trees in large quantities, and of the very finest and largest size.

All the varieties of fruits that we sell, we are cultivating in our Orchards, and we propagate only from these. Every year some new varieties are fruiting, and we thus soon acquire the means of knowing whether we are cultivating a superior or a worthless variety.

Our Catalogue of Fruits being now very extensive, and always adding to our collection, we can supply parties who desire to increase theirs, much more to their satisfaction, than they can import themselves. Our varieties are from one of the most RELIABLE SOURCES IN THE EAST, and having been propagated here by us, we can sell them BETTER TREES than they can import.

The immense quantity of fruit sent every year from this establishment to Sacramento and San Francisco Markets, has as yet been unsurpassed for size, quality and flavor, and we believe our facilities for being

CORRECT AS TO NAMES AND VARIETIES,

are as PERFECT AS IS POSSIBLE TO MAKE THEM.

In the department of

Shade and Ornamental Trees,

We have a very fine stock of all the leading varieties, some very fine extra large trees of the

ELMS, LABURNUMS AND LOCUST,

particularly the latter, we have a large lot of from 10 to 18 feet high.

Shrubs and Roses.

A very extensive collection of all that is rare and desirable.

The Greenhouse Department is quite full, and our really superb stock of

CAMELLIAS

is unequaled by anything of that sort in the State.

Garden Vegetable Seeds,

Of this year's crop, fine and of first quality, put up in packages, all sizes, suitable to the trade, WARRANTED PURE and sure to grow.

For fuller particulars, see our new Catalogue, which we will furnish GRATIS to all applicants.

☞ All orders, sent either by mail or express, accompanied by the cash, will be promptly attended to, and Trees carefully packed, to carry safely to any part of the State.

WHEELER & WILSON
MANUFACTURING COMPANY'S
SEWING MACHINES.
343 Broadway, New York.
Agencies throughout the United States.

Highest Premium again awarded by the American Institute, at the Crystal Palace, Nov. 6, 1857.
Also, highest Premium awarded at the Illinois State Fair, and Maryland Institute, Baltimore; and Maine State Fair.

THE COMPANY INVITES THE ATTENTION OF Housekeepers, Seamstresses, Dressmakers, Tailors, Manufacturers of Shirts, Collars, Skirts, Cloaks, Mantillas, Clothing, Hats, Caps, Corsets, Ladies' Gaiters, Linen Goods, Umbrellas, Parasols, and Silk Goods, to the perfect adaptation and unrivaled excellence of these SEWING MACHINES for their uses. They combine all the improvements that have been invented for sewing. Their extensive and increasing sale, and the unanimous commendation that they have received, warrant the Company in warmly recommending them. They have been in use sufficiently long to test them thoroughly, and have given entire satisfaction.

They are simple in construction, efficient and durable in operation, beautiful in model and finish, fitted to adorn the parlor, and suited to the workshop—applicable alike to the use of the family and the manufacturer. Their speed is from 1,200 to 2,000 stiches per minute, or equal in efficiency to 12 seamstresses. Substituting as they do, healthful exercise and rational employment for the soul-and-body-destroying drudgery of hand sewing, they are hailed as WOMAN'S FRIEND.

The Company feels confident that these machines, in their present form, are the best ever offered to the public; and refers, for confirmation of this opinion, to the thousands of families and manufacturers who use them.

VANCE'S GALLERY! 5

THESE Seeds have been well known in the Atlantic States for nearly three quarters of a century, a period of time almost reaching back to the days of the Revolution. From a small beginning the business has been gradually enlarged, to meet the growing wants of the country, until it has become an immense establishment, exceeding, in extent, any similar concern in Europe.

The demand near home, and orders of old customers abroad, have absorbed all the Seeds which it has been in the power of the proprietors to produce, and they are not *now* prepared to offer them to the *Trade* on the Pacific. The present card is, therefore, simply to announce the fact of increased effort on the part of the proprietors to grow greater quantities than heretofore, and THEIR EXPECTED ABILITY TO FILL ALL ORDERS FOR SEEDS OF CROP 1858.

The undersigned will be happy to open correspondence on the subject with Seed Merchants in California, &c., and will forward a copy of their Rural Register, *free of charge*, to all persons, whether dealers in, or consumers of seed, who may send their address by mail or otherwise.

J. L. POLHEMUS

DRUGGIST

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return you my most sincere thanks for your unfaltering patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of **The Purest Drugs and Chemicals.**

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them

FOURTHLY.

We Keep Open all Night!

And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amounts we have lost heretofore by crediting we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure.

Budds' Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delight's Spanish Lustral, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

v6-12 J. L. POLHEMUS.

DOCTOR HOOFLAND'S
CELEBRATED

GERMAN BITTERS,

PREPARED BY

Dr. C. M. JACKSON, Philadelphia, Pa.,

WILL EFFECTUALLY CURE

LIVER COMPAINT, DYSPEPSIA, JAUNDICE,
Chronic or Nervous Debility, Diseases of the Kidneys, and all diseases arising from a disordered Liver or Stomach.

Such as Constipation, Inward Piles, Fullness or Blood to the Head, Acidity on the Stomach, Nausea, Heartburn, Disgust for Food, Fullness or Weight in the Stomach, Sour Eructations, Sinking or Fluttering at the Pit of the Stomach, Swimming of the Head, Hurried and difficult Breathing, Fluttering at the Heart, Choking or Suffocating Sensations when in a lying posture, Dimness of Vision, Dots of Webs before the Sight, Fever and Dull pain in the Head, Deficiency of Perspiration, Yellowness of the Skin, and Eyes, Pain in the Side, Back, Chest, Limbs, &c. Sudden Flushes of Heat, Burning in the Flesh, Constant Imaginings of Evil and great Depression of Spirits.

The proprietor, in calling the attention of the public to this preparation, does so with a feeling of the utmost confidence in its virtues and adaptation to the diseases for which it is recommended.

It is no new and untried article, but one that has stood the test of a ten years' trial before the American people, and its reputation and sale is unrivalled by any similar preparations extant. The testimony in its favor given by the most prominent and well-known Physicians and individuals in all parts of the country is immense, and a careful perusal of the Almanac, published annually by the proprietor, and to be had gratis of any of his Agents, cannot but satisfy the most skeptical that this remedy is really deserving the great celebrity it has obtained.

Letter from Michigan.

We give the letter from our friend from the great State of Michigan, which will show the contrast of the seasons of the "Great West" and California, and the desire now felt for visiting our fair shores. When will our people be awake to the true interests of California?

TALLMADGE, (Mich.) May 14, 1858.

EDITORS FARMER: Nature is unfolding herself as if she were proud of her beauty; the tiny leaflets are expanding to catch the bright sun-beams of May, and they will soon cover the forest like a mantle. Fruit trees are putting forth finely; peaches, plums and cherries are mostly in blossom. Pears are beginning to blossom finely, and apples will be in blossom in a week more if the weather remains favorable.

The weather has been rather unfavorable for farming operations for the past month, it being rather wet and cold, with some hard frosts. On the 25th and 26th of April mercury fell to 18° at 5 o'clock, A.M. I think fruit was not forward enough here to take any injury, but I hear that it killed most of the early fruits south of here. Had a slight blast the 12th of May, mercury 31° at 5 A.M. Winter wheat still looks very promising, and is from six to twelve inches high. Spring grain is mostly sown, and is coming up nicely. Very little corn planted yet; potatoes are mostly planted, and some are coming up.

We are still looking for the "good time coming," but it appears to be in the distance as yet. Markets are much depressed and dull as the dullest.

I began to anticipate going to California for a reasonable price when I learned there was an opposition line started, but my hopes were soon blasted, and the fare high as ever, or higher. Should *one* company be allowed to monopolize the great highway to the Pacific Coast? I think not, as she makes use of her power to other's disadvantage by charging so high for passages, that but *few* can find means to pay. If a line could be established, on a firm basis, with a responsible company that would carry passengers and freight at reasonable prices, many an honest, hard-working farmer and mechanic would find a home for themselves and families in the genial clime of California; but, so long as the present monopoly exists, and prices are so high and uncertain, they must continue to dig, through frosts and snows of winter, and the scorching heat of summer, to procure the necessaries of life which could be easily obtained in a milder climate. We want *competition!* so let us have it. It will break down monopoly and bring things to their proper level. Try it and see how soon the shores of the Pacific would be peopled with the *bone and sinew* of the land.

Respectfully, O. N. CADWELL.

Sunshine in the Mountains.

We clip the following postcript from a private note from our valued correspondent Edith, in the Sierras, showing the weather at date of May 28:

"Thanks be to the genial sun, the snows have nearly disappeared from the mountains, and they are becoming once more robed in the verdure of Spring, and, even here, to these deep cañons of the Sierra, she brings a few birds and flowers."

The man who stoutly objected to his wife's learning to "*skate*," a month ago, has at length come to the conclusion that he is perfectly willing to "*let her slide*."

California Farmer.

Now is the time to subscribe for the FARMER. Begin with the new volume, number 1, in July. Subscribe now and secure all extra numbers till then, and the new volume besides.

The farming interests are to be greatly benefited by this wild rush for the gold mines. Miners must be fed. This rush decreases producers, and increases consumers. So farmers *stick to your farms;* raise big crops; it will pay. There is "a good time coming." The Tehauntepec route is to be opened; Randall's new steamers are to be built; the Leviathan will come to San Francisco, and the great rush of tens of thousands in the next six months, will cause a demand for the productions of the farmer, that will pay him better than Frazer diggings. So Mr. Farmer, look to your crops and subscribe for the FARMER, and both will make you rich and happy.

CHILE APPLES.—We received samples of the Apples to be sold this day, from Messrs. White & Wilson; they are a species of Pippin, of rich aromatic flavor. This fruit is gathered when green and ripens on the voyage, and is very handsome fruit. We learn, as we go to press, that the apples brought: twenty-five boxes at 9½ cents, and twenty-five boxes at 9¾ cents, per pound. The balance withdrawn.

TALL OATS.—C. Baeur, Esq., brought us this morning, a handsome sheaf of Oats, that grew in his garden, on Dupont street, near the extreme end, and in sight of the Golden Gate. The oats measured eight feet, with full-flowing heads. Who can beat our city gardens? It is the same garden that contains the splendid Rose Geranium, measuring some fifteen feet high, and the size and appearance of an apple tree.

SEED, PLANT-, &c.

LAWTON OR NEW-ROCHELLE
BLACKBERRY PLANTS!!
PRICES REDUCED!

THE subscribers announce to their friends and customers that they have now
OVER SIX ACRES
OF THE
GENUINE LAWTON (or New-Rochelle)
BLACKBERRY PLANTS,
under cultivation, and in good condition.

They are therefore prepared to fill large orders the coming FALL and the next SPRING, at the following reduced prices:

One Thousand Plants	$125 00
One Hundred Plants	15 00
Fifty Plants	8 00
Two Dozen Plants	4 50
One Dozen Plants	2 50
One Half Dozen Plants	1 50

☞ Good Plants for setting, of a second size, will be sold for $100 per 1000 Plants, or $12 per 100 Plants.

N. B.—All Plants ordered of us will be taken up and packed with the greatest care, and under our own personal supervision.

Of the many thousands sent out by us last year, we have heard very few instances of failure, notwithstanding that they have been forwarded to *every part of the country, and to California, with perfect success*, and the setting out has often been entrusted to unskilful hands.

Printed directions for setting and cultivating are sent with every package. GEORGE SEYMOUR & CO.,
v9-2 3m South Norwalk, Conn.

J. H. WRIGHT & CO.,
MARYSVILLE,
IMPORTERS AND DEALERS IN
Hardware, Leather and Findings,
GLASS, WHITE LEAD, HAYING IMPLEMENTS,
Miners' and Mechanics' Tools, Etc., Etc.

WE have just received per recent arrivals from the Atlantic States, a large stock of Goods in our line, purchased at the lowest rates, by our partner in New York, and shipped from San Francisco to Marysville, at the unusually low price of $3 per ton, thereby enabling us to sell them at ☞ San Francisco Prices.

Mountain Merchants who have been in the habit of buying at San Francisco, have found of late, since the rise of Goods in that market and the low price of freight to Marysville, that it is decidedly to their interest to buy here; and to convince others of that fact, we only ask them to give us a call and examine our stock and prices before going below. J. H. WRIGHT & CO.,
v9 18-3m Plaza, Marysville.

ORGAN MANUFACTORY.

THE Undersigned desires to call the attention of the Public to his Manufactory of
California Organs.

J street, *Sacramento.* [5] CHAS. D. BROOKS

MERCHANTS' HOTEL,
MARYSVILLE.
THIS OLD ESTABLISED HOUSE, in order to meet the demand upon its increasing business, has recently been enlarged by the addition of a number of NEW AND ELEGANT FAMILY ROOMS, a new Promenade Gallery of Two Hundred Feet in length, and has been otherwise renovated and improved, making it one of the largest and most commodious, as it always has been the most quiet and orderly Hotels in the country.
The Proprietor, in returning thanks to the Merchants, Business Men and Citizens of Marysville, and to a large portion of the Traveling Public for their generous patronage, assures them that no pains or expense will be spared to make this permanently, in all that constitutes a First-class Hotel, the best in the city.
The Merchants' Hotel employs no runners. It is located on **First street, near the New Bridge,** on the Yuba river, where the Proprietor (always on hand), will attend personally to the wants of his customers, and hopes and expects the same liberal patronage the House has always received from a discriminating public.
OFFICE AND DINING-ROOM up stairs. BAR AND BILLIARD SALOON below. House open at all hours, day and night SOLON PECK,

THE LAW OF NEWSPAPERS.

1. Subscribers who do not give express notice to the contrary, are considered as wishing to continue their subscriptions.
2. If subscribers order their papers discontinued, Publishers may continue to send them till all charges are paid.
3. If subscribers neglect or refuse to take their papers from the office or place to which they are sent, they are held responsible until they settle their bill and give notice to discontinue them.
4. If subscribers remove to other places without informing the Publisher, and the paper is sent to the former direction they are held responsible.
5. The courts have decided that refusing to take a paper or periodical from the office, or removing and leaving it uncalled for, is prima facia evidence of intentional fraud.

Postage of the Farmer.—The Postage of the FARMER to any part of the State is only 6½ *cents per quarter, or 26 cents per year.* This is the lawful postage established by Congress, and when more is exacted it is a violation o law
